> Maryville, Missouri, Feb. 11:—Just before leaving home yesterday I received The Homestead containing an account of the loss you had sustained by fire. I am writing to extend to you my sympathy. I trust you were well secured by insurance. However, there are things in a business like yours that money cannot well compensate for. Knowing your courage and good sense under trying circumstances, together with the standing and stability of your publications, I feel that the loss and temporary inconvenience will be shortly overcome by the better home of modern construction that will rise, as another monument to your energy, on the grounds of the destroyed building.
>
> Yours truly,
> George P. Bellows.

For all such letters and all such encouragement, I repeat, "I thank you." They are expressions of real, lasting friendship, milestones on the way to ultimate and complete happiness and contentment.

The writers of these letters, together with all my subscribers, friends and patrons, will be pleased to know that we are rapidly making progress in the work of reorganization. Already the partially destroyed Homestead is again under roof, the second and third stories (a week ago open to the ravages of winter, bleak, barren and desolate) are once more enclosed and a large force of carpenters is at work, day and night, making The Homestead building as good as before. In addition, the plans for the new and modern building which I propose to erect are well under way and before the first snow falls next winter I hope to have the new structure completed, ready for occupancy. Already new equipment has been ordered for all the mechanical departments, to be installed immediately upon its arrival, while a new perfecting press will be added coincidental with the occupancy of the new building, making the Greater Homestead plant rise triumphant over last week's catastrophe. A few more weeks of co-operation on the part of subscribers, patrons and friends, together with a little patience if The Homestead is a day or two late, then the misfortune will have completely disappeared, the fire will be only a faint memory and the future will be roseate, like the dawn of a midsummer day.

Most sincerely yours,
James M. Pierce,
Publisher The Iowa Homestead.

FOR A BETTER DRAFT HORSE SUPPLY.

Good horse flesh elicits favorable comment and excites admiration wherever it is shown. Be it in the tan-bark circle, on the country road, or under heavy work in the field the sight of a team or several span of powerful broad-backed, large-barreled, capacious animals of the desirable type and conformation invariably attracts and retains the attention of the passer-by. The educational value of live stock shows and fairs results from this tendency on the part of the average person to stop, look and listen (in case any of the other bystanders are not talking horses) whenever he sees horses that possess high-class characters and quality. If you ever attended a state fair or an extensive horse show you will the more fully appreciate what we are driving at.

There can be no question but that the American horse breeding industry has realized marked impetus and has been able to materially improve in consequence of the popularization of better blood and approved types through the medium of show-ring exhibitions. The breeder farmer that sees a fine string of draft animals at a show thinks that he would like to raise some horses of like quality and merit. Oftentimes the thought is mother to the deed to such an extent that in a short time he is the owner of a couple of high-grade or even pure-bred mares that he serves to a pure-bred stallion of the same breed. The resultant colt crop is of superior quality and sells for top prices on the central market.

It has been in the way of preaching the value of better blood and modern type by actual appeal to the eye of the onlooker that the leading six-horse teams of America have accomplished a world of good in improving the home draft-horse industry. These "boosters" have been unique in so far as they could not speak, but in their case actions and appearances penetrated much farther than words could possibly do. To see the four or five teams of sixes swing and wheel into the ring at the International Live Stock Exposition is to quicken and thrill the blood of even the most sluggish spectator. Each six composed of animals of the same type and conformation, of similar quality and markings, of identical animation, life, and action merits the applause which it draws forth from the crowded arena.

It was in 1900 that the first class for six-horse teams was called at the International to compete for the graduated prizes. At this meeting George Moore, Ontario, Canada, captured the premier award on a Clydesdale six which he subsequently sold to Morris & Company, Chicago. For the next three years the Morris Clydesdales carried off the top honors while in 1904 the gray Percheron six of the Pabst Brewing Company, Milwaukee, Wis., won the blue ribbon. At the following three shows the gray six of Armour & Company, Chicago, which carried a preponderance of Percheron blood, won the judges' verdict while the subsequent two seasons found the Morris six-horse team again in the van. During the last two years the Morris six has maintained its place on the throne and today ranks as the finest sextet of draft horses that are driven and hitched in three pairs in the entire country.

It is frequently necessary to substitute another younger animal of better quality for one of the horses in the team and on this account the makeup of the six often changes from year to year. The victorious Morris six at the last International consisted of six pure-bred Clydesdales, Archie, Robbie, Hector, Drew, Malcolm and Walter by name. Of the three teams the wheel team is naturally composed of the heaviest and strongest animals. Ordinarily the weights of the best wheel teams will range from 4,000 to 4,600 pounds, while the swing team will average from 3,800 to 4,200 pounds in weight. The lead team is made up of the lightest animals that weigh in the neighborhood of 3,600 to 3,800 pounds.

At present in the show ring the sixes are driven to empty wagons by expert drivers, who skilfully manipulate their charges through all sorts of difficult maneuvers in the limited space of the show ring. With wheel rubbing on wheel and with the hubs practically interlocked the six-horse teams dash and prance around the circle showing to advantage the style and action, vim and vigor of the animals. The sight of these horses that average from 1,700 to 2,300 pounds in weight agilely and gracefully dancing over the tan bark is inducive to admiration on the part of the onlookers. Farmers, breeders and horsemen bump elbows in giving the "glad hand" to these "kings of the draft breeds."

Apparently there is only one suggestion that could be made which might make toward an improvement in the exhibition of these powerful draft animals. American breeders and exhibitors have been severely criticised for their tendencies toward overfitting show animals. The British horsemen claim that the Americans aim to conceal defects and blemishes by placing surplus layers of fat on these exhibition horses. Our foreign cousins evince the "show me" attitude that is assumed by some of the native farmers who see the six-horse teams in the ring when they say: "There is no doubt but that those horses show up to advantage in the exhibition arena, but what would they do under field conditions where they were put up against a good, stiff day's work at heavy hauling or teaming?" It would, therefore, be of great advantage to the draft-horse industry if these animals could be subjected to some test of strength and endurance at the time of their appearance in the exhibition ring. If these horses could stand up against the strain of rigid test they would strike a final knock-out blow for the advance and upbuilding of the pure-bred draft-horse business throughout the width and breadth of the United States.

DO NOT DELAY.

Five of the best and most practical papers published may be obtained through our splendid Red Letter Subscription Offer at practically one-half the regular price. If you will remit $1.25 to The Iowa Homestead, Des Moines, Iowa, at once we will see that you receive a full year's subscription to each of these five papers: The Iowa Homestead, Kimball's Dairy Farmer, The Woman's World, Kansas City Weekly Star and People's Popular Monthly. No better combination of reading matter at such a reasonable rate could be secured. We urge that you avail yourself of this unparalleled offer at once, so that the largest and best issues of each paper may reach you promptly at this season of the year when every member of the farm household has the most time for reading.

FIRST HAND SILO INFORMATION.

The introduction of the silo has in a very large degree revolutionized feeding methods as applied to almost all classes of live stock. It has meant the extension of summer conditions into the winter months. In other words, a man who has a well-filled silo is able to operate in his feeding methods in absolute harmony with nature's laws. As a result the cost of producing live stock is lessened, while at the same time healthfulness and stamina are increased.

A glance through "Modern Silage Methods," a volume recently published by the Silver Manufacturing Company, of Salem, Ohio, will demonstrate to the non-believer that the introduction of the silo is based on sound economic principles. In this book will be found many facts and figures which show the relative feeding value of ensilage as compared with the corn crop fed in any other way. It will further show that corn is not the only crop from which excellent ensilage may be made.

A summary of the principal experiments that have been conducted at the various stations in feeding all classes of live stock is given in the volume referred to and in addition an illustrated description of the various types of silos that are being placed on the farms of the corn belt. The compilation is given showing the amount of material required to construct the various types of silos, thereby making the book well worthy the perusal of those who are contemplating the adoption of this method of feeding live stock. This volume will be of special helpfulness to those who are now feeding ensilage, because the compounding of rations is taken up in great detail and such combinations of feeds as are recommended may be used with safety, because they are based on the results of scientifically conducted experiments. The volume is in reality a feeder's and dairyman's guide—a guide indeed to the goal of success for those who are able to assimilate new knowledge and use it in their daily affairs.

BUILDING UP THE SOIL.

So much has been said in recent years through the agricultural press and at farmers' meetings about soil fertility that those who read or listen may be becoming tired of the subject, but like every good thing it will bear repeating, and to those who have not given the subject any thought it may be surprising to know how much may be done with what is already on the farm, or may be put there with little money expense to preserve, or increase, the farm's fertility.

Without thought we crop our farms year after year, selling the crop from the farm, and putting nothing upon it to replace the elements of fertility taken off by the crop. To be sure, this is not the case where the crops are fed to live stock on the farm, and they only sold. Where this is done the fertility is maintained and upon dairy farms where not only the crop raised is fed, but also much feeding stuff purchased from the outside, the fertility of the farm is increased; but so many farmers sell the whole crop raised and put nothing back that the farm is continually being wasted. Even where the soil in its native state is thin and lacking in fertility it may be greatly increased, or continually improved, by a judicious use of fertilizer, either produced on the farm or obtained from other sources.

Though a steady building up of the soil is all that the strongest advocates of increased productiveness argue for, a soil may be so improved in a single, or at least in two seasons, as to show a marked improvement in the crops produced. As an instance, a soil that had for years produced but fifteen to twenty bushels of corn per acre was made in a single year, by the application of fifteen wagon-box loads of stable manure to the acre, to produce sixty-five bushels and fifteen pounds of corn as the first year's crop.

If the farmer can see the profit there may be in buying commercial fertilizers to apply to his soil, he first wants to find out the elements in which his soil is deficient; if in phosphorus, he does not need to buy an expensive commercial fertilizer, but the application of a few tons of ground rock phosphate, especially if he uses it as a top dressing upon clover and turns it all under, or mixes it with his stable manure as produced, it will greatly improve his farm at very little money outlay. If the soil is sour, a little raw ground limestone per acre will overcome that and, in a certain sense, set free the plant food contained in the soil.

Too many farmers, besides selling off most of their soil through crops, are wasteful of that portion of it that is retained upon the farm so far as preserving it for fertilizing purposes is concerned. Every farmer should make it a point to preserve every particle of manure and let no vegetable matter go to waste that may be used to increase the manure pile. Instead of letting a pile of straw remain in the field and rot down, it should be drawn to the barnyard and, if not used for bedding in the stables, be tramped over by the stock and in this way prepared to be drawn to the fields and replace some of the fertility that would be otherwise removed.

But there are farms that can be made to produce more than they now do without applying manure or buying any fertilizers or raw soil fertility in the shape of rock phosphate or limestone. We know of one instance where a farmer bought a forty-acre field that was in oats at the time he purchased it. The crop was light. When cut the burs were about as thick as the stubble. It had been corned until it was about exhausted and the burs allowed to have their own way. He mowed the burs carefully before seeds formed, then plowed shallow and drilled in wheat and timothy. The following spring he sowed clover, five quarts to the acre. It was mowed twice a year for hay and seed. This treatment about finished the burs. It was then pastured for two years, plowed deep in the fall and planted to corn. It yielded fifty bushels that year and forty-five the next. The following year it was sowed to oats and clover and clipped in the fall to prevent clover from seeding and to catch any stray burs that might be left. The next year a heavy crop of clover hay and seed was removed and the clover haulm put back on the land with a spreader.

The following year, 1909, corn was planted and the yield was sixty bushels and the ground was perfectly clean. Those who own land that will not produce clover can try cowpeas. If it seems too wasteful to plow the whole crop under, they may be harvested, threshed and the straw put back as was the haulm in the case cited above, or the crop may be fed out and the manure carefully husbanded and drawn to the fields.

A little thought and a little work will keep a farm from "running down," in fact, will increase its fertility.

ROAD BUILDING IN SCHOOLS.

Regardless of the immediate specific results in the various states the good roads crusade now in progress can hardly fail to do good. There is a general feeling that, whatever may be the plan decided upon for the future, there has been enough dilly-dallying in the past and that strong and united efforts are now necessary. These efforts may take different forms, but the reports from practically every state in the grain belt show that the people are waking up to a realization of the fact that money, rather than more laws, that determination, rather than more conferences and conventions, are necessary in order to bring about the era of good, permanent highways, for which we are all devoutly hoping.

Not the least pleasing of all the reports is the one which comes from Missouri and which is unique in that it not only incorporates the planks of a one-mill state road tax levy and the obtaining of federal aid, but also a plank in favor of the teaching of road building in the public schools. Here is a work upon which many millions of dollars are annually expended and yet the extent of the public's ignorance on the subject is lamentable. It is not necessary that the rank and file of the public should become expert road builders, but the best results will not be obtained until the people themselves are conversant with the fundamental details of good highways and are intelligent enough to discern between good legitimate plans and bogus ones. Starting with the pupils in the public schools is beginning the road training none too early. Splendid results have been obtained by the campaign of the good roads trains run by various railroads, but the gospel comes to adults who would better understand it and more readily practice it if they had been thoroughly grounded in the subject in their younger days. Teaching r ad building in the public schools will not build good roads, but it will bring about the era of good permanent highways sooner, for it will develop and crystallize public sentiment and arouse public discussion, which is necessary if any crusade, no matter how good and how necessary, is ultimately to succeed.

AN OPINION ON PLOWING.

An Illinois subscriber in the following communication outlines some of the points that must be kept in mind in the plowing of land:

In the work of plowing much depends on the character of the soil and the crop to be grown, and to be sure as to what is good plowing depends somewhat on the time of year as well as the character of the soil. Should the land be a very heavy clay, with a clay subsoil, I try to have the furrow slice stand on edge as much as possible, lapping on one another like the clapboards on a house. This method leaves an opening under each furrow that acts as a drain, giving the upturned soil a chance to drain, and in the spring these furrows will dry out very quickly, giving a good chance for harrowing a fine seed bed. On light soils this lapping the furrow slice is not so important, as naturally light soil has good drainage. In spring plowing for potatoes or other root crops I like to have the furrow slice turned flat over, and plow deep, because the sod or litter or whatever is plowed under will rot quicker and is better hidden from the direct sunshine and, of course, we will not lose so much of that most valuable ingredient of fertility, ammonia (or nitrogen).

As to laying out the lands, that depends on the kind of soil. In a light soil, with a good drainage subsoil, the method of going around and around the field is as good as any and does away with the dead furrow, but on heavier soils, for spring plowing, ridges thirty feet wide, fifteen feet each side of the center, which is the crown of the ridge, are all right.

The width of the furrow is governed by the capacity of the plow and the width desired, and can be readily adjusted by the clevis on the beam. Many farmers regulate the depth of the plowing with this clevis, but I prefer to adjust the up-and-down clevis so the team will draw the plow on the bottom, as described above, and this will usually give a four or five-inch furrow. Should a deeper furrow be required, regulate it by the short chain connecting the whiffletrees with the plow; shorten it for shallow plowing and lengthen it for deep plowing. Should this chain not be long enough to allow the depth that I want, I lengthen out the traces rather than change the draft at the clevis on the plow beam.

Many will question the advisability of plowing in such a manner that the furrow slice tends to stand on edge. While theoretically this subscriber is right, yet practically few of us can afford in this day of high-priced labor and high-priced land to take the time to plow furrows so narrow that they will stand on edge. This idea of using narrow plows so that furrows can be stood on edge is carried to extreme in European countries, but it must be remembered that with our fourteen and sixteen-inch plows we are able in this country to produce in some instances as much as six times the amount of wealth per man that is produced in some of the older countries. We therefore hold the opinion that under ordinary circumstances some other method of draining the land must be worked out than that which requires the plowing of narrow furrows.

A HIGH RATING FOR SWEET CLOVER.

A subscriber, Henry Stewart, of Whiteside county, Ill., is a staunch believer in the value of sweet clover when used as a pasture grass or as a catch crop. Mr. Stewart's experience is briefly summed up in the following communication:

To say that sweet clover as a pasture grass is superior to all other legumes might be hard to substantiate. But to say that sweet clover has characteristics of superiority over all other legumes is not hard to prove.

The first thing in the early spring, sweet clover asserts its superiority in its rank early growth, which usually affords good feed several days earlier than most anything else that grows. Then again, in its tenacity and endurance to grow and keep growing when most other legumes have suspended business its habits are remarkable.

In seasons of severe drouth, when other legumes have quit and are dry and brown, sweet clover and alfalfa are sending their roots deep into the moist subsoil and the portion of the pasture planted to either of these is like an oasis in a desert and are furnishing green and succulent feed just at a time when it is the most needed. While alfalfa may equal sweet clover as a drouth resister, it cannot stand wet feet, and a little water puts it out of business. Sweet clover will stand flooding and will equal alsike in the amount of water it will live and thrive under. Another element of superiority is its ability to endure hardship. While alfalfa will not endure close pasturing you can feed sweet clover almost into the earth and still it will grow and do business. Another element of superiority over either alfalfa or red clover is the absence of bloat when stock are gorged on its rank growth. The bitter element of the plant, which all stock must first learn to relish, is also the element which assists digesting and prevents bloating when stock are gorged upon it. The uninformed may say that stock will not eat enough of it to bloat, but this is not true. When the appetite is once formed for sweet clover you no more have to coax the cow, the horse or the hog to fill himself with it than you have to coax the old tobacco chewer to take tobacco.

I am a grower of sweet clover, both as a pasture grass and as a catch crop. Each year we sow from fifteen to twenty acres of sweet clover with oat seeding. After the oats are harvested the sweet clover comes on in the stubble, and if the conditions are favorable it makes a rank growth of most excellent fall and winter feed, or a cutting of most excellent hay can often be secured in September.

The next spring the rank growth of clover may be pastured off, or Professor Hopkins says, in an Illinois Experiment Station bulletin on legumes, that he knows of nothing equal to the rank growing sweet clover for green manuring. The only expense is in the seeding, and I know of no catch crop that will, with the same expense, equal it in returns. Sweet clover has the characteristics to recommend it alike to the farmer who has hard sliding to raise any egume and to the farmer with soil dapted to either red clover or alfalfa, and is worthy a place in any pasture.

Sweet clover is a short biennial. For permanent pasture it should be re-seeded he first winter or early spring, and if pastured so close as to prevent its seeding it should be re-seeded every spring.

Instances are rapidly accumulating which go to show that under a certain set of conditions sweet clover might occupy a much more prominent place agriculturally in the future than has been the case in the past. This subscriber has dealt with it wholly as a pasture crop and under his conditions it seems to have given a good account of itself.

BRUISED AND CRIPPLED HOGS MONEY LOSERS.

In recent years great improvements have been made at the large market centers in the method of handling fat hogs and there is now a movement on foot to bring the important lesson home to farmers and shippers that a bruised hog is a losing proposition. Buyers in the employ of the big packers are more and more discriminating against lots of hogs that show a large percentage of bruised or injured animals. This means a heavy loss to the shipper and in many cases it more than wipes out his profit.

Frequently hogs are put in bad condition by the method of loading. Allowance must be made for a hog's natural stubborness and it must be remembered that in handling hogs patience should be the dominant virtue displayed. Slippery loading chutes should be covered with straw or manure and under no circumstances should they be pounded into subjection or submission. Even a whip will mark the skin and impair the value of the finished carcass. Very often the first damage is done when loading in the wagon on the farm and in this connection we would like to call attention to the use of a big feed basket at such a time. When the hogs are rounded into a small lot and everything is ready to walk them up the chute into the wagon, two or three men carrying zinc or metal baskets can load the hogs much more quickly and easily than if they try to operate cudgels. When a hog turns to go down the chute if he is faced there and then with a big bucket he will back up and in so doing will simply accompany his fellows that are going forward up the chute. By this plan it is often possible to load a large drove of hogs without allowing a single one to become obstreperous.

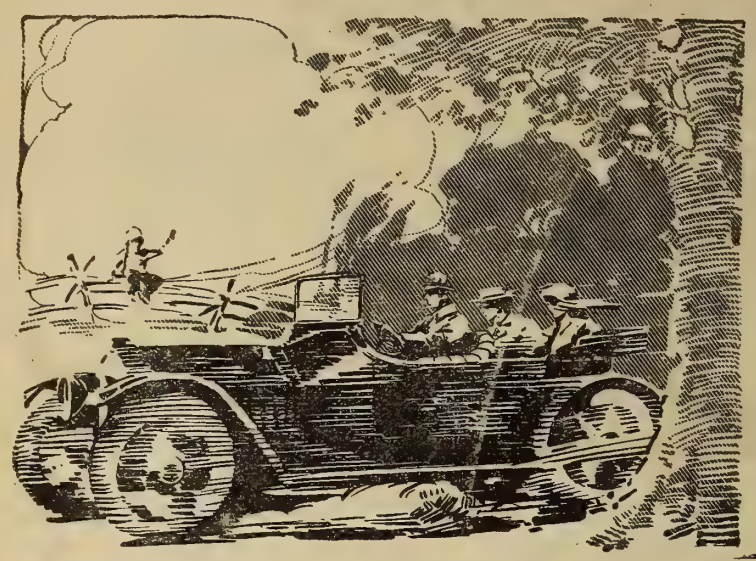
As intimated above more attention is being paid to the way in which animals are handled at market centers than ever before and that being the case it is greatly to the producer's interest if he will exercise the same degree of care.

SMUT TREATMENT INCREASES YIELD.

Experiments in treating grain for smut carried on at the Ontario station for a period of five years show some rather striking results. In the case of oats untreated the average yield per acre for the five-year period was 60.3 bushels. The percentage of smut in the untreated crop varied from 3.4 per cent to 11.6 per cent. Oats immersed in a mixture of water and formalin gave an average yield for the five-year period of 68.3 bushels per acre. In other words, the treated seed yielded eight bushels per acre more than the untreated. In the case of winter wheat the untreated seed yielded thirty-eight bushels per acre while seed treated with the formalin method yielded 43.3 bushels per acre.

A comparison between the bluestone method and formalin resulted in favor of the formalin method in every instance. The plan that resulted most effectively not only in destroying smut, but in increasing the yield involved the immersion of the grain for a period of twenty minutes in a mixture composed of one pint of formalin to forty-two gallons of water. In these experiments the grain was sown shortly after the treatment, but it is not assumed that this plan is in any way superior to that of drying out the grain and sowing it later. According to these results it would appear as if enough has not been said about the beneficial results of treating seed apart from its influence in bringing about the destruction of smut. Formalin is inexpensive and it should be used much more freely in the future than it has been used in the past.

Mitchell



THE 1913 Mitchell makes three strong, favorable impressions on the man who wants to buy a car; the first by the way it looks; the second by the way it is made—the details of its construction and equipment; the third by the way it runs when he is taken out for a demonstration.

All exaggerations and sensational effects are eliminated in the design of the Mitchell; its lines are those of simple elegance and utility, developed by our engineers along the lines of the best foreign cars.

The man who examines the 1913 Mitchell carefully will soon satisfy himself that no other car at anywhere near the price offers so complete a combination of the newest improvements developed in the motor industry. All the essentials of the highest-priced automobile are in this car—the things that assure power, speed, comfort and convenience.

In the case of the Mitchell, moderate price does not mean "moderate" workmanship or materials; only the best available of both have been utilized—built according to the same standards that have made Mitchell vehicles famous for the past 78 years.

All 1913 Mitchell cars have left drive and center control; Bosch ignition; Rayfield carburetor; Firestone demountable rims; rain-vision windshield; Jones speedometer; silk mohair top with dust cover; Turkish upholstered cushions; Timken front axle bearings; gauges on the dash to show air pressure and oil pressure; gauge in gasoline tank showing amount of gasoline it contains; and a portable electric lamp which also illuminates the instruments on the dash.

All with T-head motor, electric self-starter, electric lighting system, and 36-inch wheels

FARM FURROWS

TURNED BY A PRACTICAL FARMER

The first parcel post package delivered at our box was a sample of woven wire fence. Long live parcel post, also woven wire fence.

The dairy cow that has to quench her thirst with ice water cannot be expected to do her best. A cow giving milk requires more water than a farrow cow, and she does better when the chill has been taken from it.

A dry freeze is good for the soil. There have been a number of them already this winter, and unless the spring brings floods, the soil ought to work up in best possible condition.

There are a whole lot of folks who are looking for a chance to adopt children who will quickly grow into hired boys and girls, only they expect to keep them always on the job without the formality of paying wages.

You can easily tell a dead merchant now. He is paying no attention to parcel post, and is making no effort to serve his customers through it, even when by doing so it would prove a great accommodation. If the mail order house gets the most business it is because advertising and enterprise bring it.

It will soon be time to think about the corn planter. I once lost a good sum of money by using an old corn planter a season too long. It isn't everything that a planter can be made to work, it is how it does its work that counts.

A disk harrow ought to be sharp to do its best work. Loading on weight to compel a disk to cut in only serves to increase the draft, while a sharp, keen edge gets down into the soil and turns it up with the least possible resistance. It pays to keep every kind of a disk tool sharp.

On a cold morning, when iron is full of frost, is a good time to twist bolts off easily and otherwise cause breakage that could not happen by mere "tinkering" during warm weather. Zero weather is a poor time to make repairs on machinery. An ax, for the same reason, will nick quicker on a cold morning than at any other time.

Almost everyone has more roughness than they need, and hay is getting cheaper instead of higher every week, an exact opposite of conditions at this time last year. There will be fodder to spare on many farms, this spring, but better have it to pile in for the stock to bed on than to have to buy at high prices, as was the case with many last spring.

There is no farm animal that is more particular about his bed than the hog and if his bed is not clean and dry there is trouble in store for the owner. The worst bed a hog can have is a deep layer of damp straw that has begun to heat.

In order to get the most out of oil meal for hogs it should be mixed with boiling water and allowed to stand a few hours before mixing with the other slop. Some feeders get good results by feeding it dry, but their equipment is different from that of the average pork raiser.

The public sale has been of daily occurence for a long time, yet stuff continues to sell well. The public sale is a prairie institution, and is therefore strictly American. The Easterner, visiting in the West, is surprised at the number of public sales held, and naturally he wonders if everyone is wanting to sell out and leave, the changes made appear to be so numerous. It is only the western way.

Dynamite is a powerful helper in ridding the farm of stumps and stones, but it is a good plan to study his habits carefully and let him use his strength where it will do the most good. The man who tries his strength against dynamite at close range never makes a second trial if he can avoid it.

A galvanized iron roof may not be the thing for the stock barn that is poorly ventilated, but it is the best and the longest lived for the open cattle shed, the corn crib and other common outbuildings. It will outlast shingles and it will be there in good shape after two board roofs have rotted and gone.

IMPROVED GRAIN DISTRIBUTED FREE.

The recently organized Iowa Agricultural Experiment Association—an association in which the farmers and the experiment station co-operate for mutual help—hereby announce that it is this year prepared to distribute to careful farmers in every county in the state seeds and other materials for experimental tests on their farms. The experiments will consist in the trying out of superior varieties of oats, barley and corn, and the testing of different methods for the successful production of alfalfa and red clover crops.

Some of the varieties of grain will be improved, pedigreed sorts now being generally distributed for the first time and the object is to have these widely tested in order to determine their adaptability and productivity in the various districts and localities, before recommending their extensive use. The farmers undertaking these tests will of course be the first to have a supply of seed of these new varieties for their own use and for sale. Most of the materials for the alfalfa and red clover experiments as well as for tests of varieties of grain will be distributed free of charge, but each farmer undertaking an experiment must agree to conduct the test according to definite instructions and to make a careful report to the secretary. Each experimenter who does the work well and sends in a reasonably accurate report will become a member of the association by so doing.

The officers of the association are particularly anxious that energetic and progressive young farmers shall take part in this co-operative experimental work so that knowledge of the value of these varieties and methods shall be quickly spread abroad and in order that the seeds may be carefully kept pure and multiplied until a large supply of pure seed is available in every district where the new varieties prove adaptable and productive. Progressive farmers of any age may, of course, participate in the work if they so desire. A printed circular giving full particulars, regarding the experiments, together with an application form may be secured by writing to the Sec. J. Buchanan, Agricultural College, Ames, Iowa.

THE "NEW-WAY"
AIR-COOLED TWIN CYLINDER
"BEST MADE," says McDaniels

"Gentlemen:—
We have been using an 8 h. p. "NEW-WAY"—have just bought a 12 h. p. and if we need a third will buy the "NEW-WAY" because it gives better results than any other—to our knowledge it is the best and most economical engine made. McDaniels Milling Co., McDaniels, N. Y."

AN ALL-WORK TRACTOR

Man did his first plowing with a wooden stick. If you plow with horses, this looks queer to you. But the farmer with a tractor looks upon working horses as queer too—except for small jobs—to him it means waste.

Get these Tractor Facts in your mind

One man's work on a farm with one horse is limited to 25 acres—one man with a tractor handles 400 acres. You can't afford to plow and till as deeply with horses—nor as well. It costs too much to keep a lot of horses standing idle most of the time.

A tractor will save $1 an acre in plowing—besides it will harrow, haul, thresh, bale, saw, etc.—pull any machine or drive it with a belt. A horse eats 10,000 pounds of food a year. One acre out of every five under cultivation goes to feed farm horses.

A tractor works 24 hours a day if necessary—a horse 10 hours at best. Horses get sick—tractors don't. A plague struck Kansas last year—20,000 horses died in six weeks. To plow an acre is a day's work for a man and one horse—30 minutes' work for a man with a tractor. The tractor is as far ahead of the horse as the railroad is ahead of the stage coach.

Here is the whole tractor argument: LESS WORK—BETTER CROPS—MORE PROFIT!

It makes a Difference what Tractor you have

Some prove costly—some cheap. We build a tractor the right way. For simplicity, power and adaptability, it is the equal of any tractor. For strength and cheapness of operation, it has no equal. It really costs less because it lasts longer.

For all-round tractor ability pick the

RUMELY OILPULL TRACTOR LA PORTE IND.

It is the only tractor that burns kerosene successfully under all conditions of climate and load. It is built with the right idea—to use cheap, abundant fuel—and make it give the same results as gasoline.

Think of the saving in fuel cost—$1.50—$3.00 every day you use it.

Here are some OilPull Facts

FUEL—The OilPull burns any liquid fuel. It will burn kerosene in any climate—at any load. ENGINE—The O.P. 30-60 h.p. is a four-cycle engine with two cylinders of ten-inch diameter and twelve-inch stroke. O.P. 15-30 h.p., a single-cylinder engine with same diameter cylinder and same stroke. CYLINDERS—The cylinders are singly cast and have individual heads. CARBURETER—The Secor-Higgins Carbureter is used—which regulates the supply of fuel under all conditions. There are no springs nor internal mechanism within the carbureter. IGNITION SYSTEM—Low tension make-and-break ignition with standard magneto.

LUBRICATION—A combination forced and splash system of lubrication is used. GOVERNOR—The governor is actuated by bevel gears which are driven by reduction shaft within the crank case, affording perfect speed regulation without stopping to readjust carbureter or governor.

GENERAL—The material and design of the gearing, crank shaft, crank case, valves, axles, etc., is of the best. All working parts are accessible and still thoroughly protected. The OilPull combines endurance, dependability, simplicity, and low running cost with the fullest capacity for self-regulation.

OilPull is made in two sizes—30 tractive h.p., 60 brake h.p., and 15 tractive h.p., 30 brake h.p.

The Dreadnought Steering guide, which makes the tractor self-steering, is furnished with every OilPull.

We are also able to furnish a complete line of power-farming machinery—gang-plows, threshing outfits, automatic balers, saw mills, etc.

LESS SEED MORE CROP

The Sign of the Van Brunt

SEED REPRESENTS MONEY

SO DOES PLANTED GROUND

A drill that saves seed and still gives you maximum returns saves you money. One that plants seed so as to waste no ground, makes you money.

A Van Brunt Drill Does Both Because It Has

Adjustable Gate Force Feed

Even feed does not depend entirely upon flow of seed from hopper which may vary, but is assured by patented reservoir with adjustable gate at bottom of each seed cup. This combination positively provides for even discharge into seed tube.

With an even flow of seed guaranteed, you are safe in planting the minimum amount because you know there will be no thin spots.

These drills are quickly adjusted to plant anything from alfalfa to bearded oats. Change of feed for large or small quantity of grain made instantly. No complicated sets of gears.

Grass seeder attachments can be furnished on all sizes.

Single Disc Closed Boot

This Van Brunt invention made disc drills popular. It revolutionized the construction of grain drills. Guaranteed not to clog or choke in any ground that can be seeded. Compels an even depth with every kernel covered. All seed planted at bottom of furrow. "It beats the dirt." The non-choking feature saves time and the even planting makes a better crop.

Pressure springs are instantly adjustable individually without tools. All seed furrows the same depth.

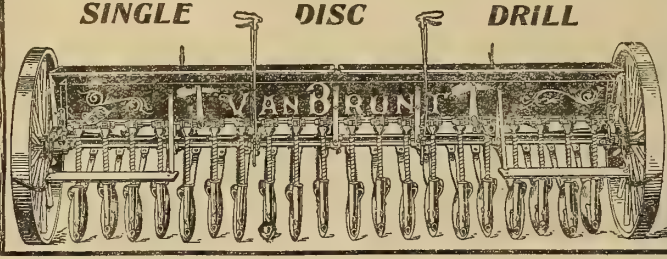
Disc bearings are guaranteed to last lifetime of drill. Any that wear out will be replaced free of charge. One oiling for every quarter-section seeded is sufficient. They are dust-proof and oil-tight.

Learn all about the successful, light-weight, durable Van Brunt Drills. Write at once for special new catalogue.

Ask for package No. VB 27.

Address JOHN DEERE PLOW COMPANY, Moline, Ill.

SINGLE DISC DRILL



Do Power Plowing This Way
Run the Entire Outfit Alone

YOU can do it with an Avery "Self-Lift" Engine Gang. You don't need any plowman. **Run the entire Plow Outfit alone.** You don't have to raise and lower the plows by hand levers at the end of each furrow. **Simply pull a cord**—that's all there is to do.

In the Avery "Self-Lift" Engine Gang a special Automatic "Power Lift—Self Drop" Device takes the place of the usual hand levers. The plows are handled entirely by power taken from the plow wheels. Pull a cord at the end of the furrow and the plows raise—turn the Outfit around, pull the cord again and they drop into the ground.

Saves you the wages and board of a plowman. One man or boy can run the entire outfit alone. An Avery "Self-Lift" Plow pays for itself by the saving it makes.

Saves all the hard backbreaking work of lifting and lowering each plow by hand levers at the end of each furrow. Running back and forth on a hand lever engine gang lifting and lowering the plows by hand levers is one of the meanest and hardest jobs there is. You save all this hard work with an Avery "Self-Lift Plow.

Saves time at the ends. No stopping or slacking up to raise or lower the plows. Pull the cord and keep right on going.

Write for Avery "Self-Lift" Plow Book

Explains fully why the Avery "Self-Lift" Plow **is the most wonderful invention ever made in Engine Gang Plows**—why it has put all the Hand Lever Plows entirely out of date. Shows how it makes **clean, even ends,** and **does fine job of plowing** as well as saving expense, hard work and time.

Built in sizes 3, 4, 5, 6, 8 and 10 Furrow. Stubble or Breaker Bottoms. **For use with any make or kind of Traction Engine**—Steam, Gas or Oil. Won all the Gold Medals in the 1912 Winnipeg Plow Contest. If you haven't an Engine already, also ask about Avery "Light-Weight" Gas or Oil Tractors or Avery Undermounted Steam Engines. Address

$250 Motorcycle Given Away

YOU SEE in this picture a boy riding one of the $250 Excelsior Motorcycles we are giving away. In other parts of the picture are the faces of several other boys. They are hard to find, but by turning the picture about you will be able to see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send me your name and address, for I will tell you all about the contest in which you can win the seven-horsepower motorcycle and many other prizes.

1500 Votes Free I will send you a special coupon good for 1,500 votes toward the motorcycle. All you have to do to get this coupon is to send your name and address at once.

PEOPLE'S CO., • 515 Popular Building • Des Moines, Iowa

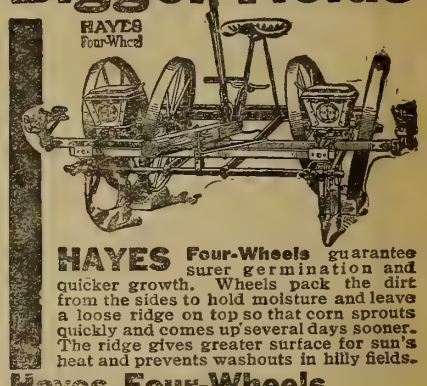
CURRENT EVENTS

A CONSTITUTIONAL amendment which would restrict the president of the United States to a single term of six years and would bar Woodrow Wilson, Theodore Roosevelt and Wm. H. Taft from again seeking election, was approved by the senate last week by the narrow margin of one vote more than the necessary two-thirds. The exact wording of the proposition is as follows: "The term of the office of president shall be six years and no person who has held the office by election or discharged its powers or duties or acted as president under the constitution and laws made in pursuance thereof, shall be eligible to hold again the office by election." It would thus be seen that while a president could not be reelected, he might gain the office of vice-president and, through the death or removal of the president, be elevated again to the presidency, but in no other way could he secure the highest position for a second time. The progressives maintain that the plan is simply aimed to keep Colonel Roosevelt from running again, regardless of its merits or other effects. They oppose it bitterly in the senate and will fight throughout the country at large to keep the requisite two-thirds of the states of the Union from ratifying the proposition before it can legally become a law. The senate turned down every proposition to amend the bill so that it would not apply to any former presidents or the president in office when it finally becomes a law if it ever does. The amendment now goes to the house, where it must likewise pass by a two-thirds vote and then be put up to the legislatures of the various states for ratification by two-thirds of them before it can become the law of the land.

COLONEL GEORGE W. GOETHALS, the builder of the Panama canal, for secretary of war in President Wilson's cabinet is the latest rumor from Washington. It will be recalled that after President Taft's Christmas visit to Panama he proposed the appointment of Colonel Goethals as civil governor of the canal zone, but fearing that the democrats in congress would block the appointment he withheld the nomination. Colonel Goethals seems slated for even higher honors, as the excellence of his work in building the canal so promptly and so efficiently is recognized beyond any question of partisanship. He went to Panama when things were in a bad shape, because of the tangle of red tape and the chaos into which political incompetents had allowed affairs to lapse. He has ruled things with a firm hand and will have the canal finished long before it was promised. It is believed that Colonel Goethals would make a most efficient secretary of war, as he has good executive ability and knows the problems of the army by personal experience. Other political rumors of the week slate Wm. J. Bryan for secretary of state positively, while adding that A. Mitchell Palmer, of Pennsylvania, a close friend of President-elect Wilson, will be another cabinet member. For secretary of agriculture Obadiah Gardner, of Maine, and President Waters, of the Kansas State College of Agriculture seem to be the favorites, although Governor Wilson has not made any intimation whatever as to his choice. He has stated that he will not announce any of his cabinet selection prior to his inauguration, when the names of all the cabinet members will be made public at once.

WYOMING was the thirty-sixth state in the Union to ratify the proposed constitutional amendment providing for an income tax, making the requisite two-thirds of the states which the constitution says must approve of any amendment. The following day Delaware and New Mexico likewise ratified the amendment, so that just as soon as congress takes the required action (which will be done probably at the extra session to be called by President Wilson early in March) the income tax will become the law of the land. It provides for a tax upon all incomes in excess of an amount not yet established, probably $5,000 or even as low as $4,000. It is expected that this tax will result in an immense sum being raised for the government, approximating $100,000 a year. The income tax will supplant the present corporation tax and will apply to the incomes of individuals, firms and corporations. There is a probability that business firms will be obliged to certify to the government the salaries paid to their various employes and the revenues of their various stockholders, upon which the firm will pay the income tax direct to the government, deducting the same from the salaries and revenues of the individuals. This will simplify matters for the government and do away with the necessity

Four Wheels Bigger Yields



HAYES Four-Wheels guarantee surer germination and quicker growth. Wheels pack the dirt from the sides to hold moisture and leave a loose ridge on top so that corn sprouts quickly and comes up several days sooner. The ridge gives greater surface for sun's heat and prevents washouts in hilly fields.

Hayes Four-Wheels

regulate depth of planting to the fraction of an inch—the only planter made that plants every kernel exactly the same depth. This is an important factor in the success of the corn crop. Corn all comes up at the same time, allows earlier cultivation and guards against missing hills from uneven planting.

HAYES Four-Wheels cover where all ordinary open wheels fail. They spread at the top and clean themselves. Guaranteed not to clog or carry the corn over even in wet and sticky soil. Insures a stand in low wet spots of field and allows earlier planting.

Never Misses a Hill

The HAYES Drop never fails. It is the simplest, most durable and most efficient ever made. Fewer parts than any other. Has no clutch to miss and give trouble. Never cracks or grinds the seed. Will drop accurately any size or shape kernel.

The HAYES leaves no bare spots in your fields. Increased yields soon pay for it. Farmers who have been disappointed with edge drop planters are now buying the HAYES never-fail drop.

Leads All Other Planters

Over 160,000 in use. Most perfect checking planter made. Short coupled, light draft and turns in shortest space. Twenty-five years success. Fully guaranteed.

Can be furnished with perfect working Fertilizer and Cow Pea Attachments, also Stub Runners or Discs if preferred.

Ask your neighbor and dealer about the HAYES and send postal for free booklet P containing valuable planter facts.

Send for our FREE booklet, "3 Ways to Plant Corn"

of prying into individual affairs. The new tax will not become effective for several weeks yet. It will add very materially to the revenues of the government, which will be cut down by the revision downward of the tariff which the democrats are proposing to bring about in the very near future.

TWO months having been devoted to peace negotiations, without results, warfare was resumed between Turkey and the Balkan states last week. The Bulgarians immediately resumed the siege of Adrianople, while the bombardment of the fortresses around Constantinople was taken up with renewed vigor. The Young Turks, who are now in the ascendant, propose trying to make a record against their foes, so they may be expected to fight with considerable spirit for some time. It seems almost certain, however, that Adrianople is doomed to fall, as the provisions are being rapidly exhausted. The last proposal of Turkey was to surrender the town to the allies, withholding only the mosques and temples, but the Bulgarians demanded an unconditional surrender, believing that conditions are so serious the fortress must surrender after a few days bombardment. The allies now declare that they will not consider peace again until the Turks are willing to surrender almost all of their possessions in Europe. Both sides have strengthened themselves during the armistice, Turkey bringing in fresh troops from Asia and the allies resting their exhausted forces and adding to the armament. The winter season has somewhat relaxed in the Balkans, so the resumption of war is not accompanied by the climatic hardships which marked the early stages of this most severe war of recent times. The loss of life on both sides is said to be far in excess of 100,000 men already.

BEFORE he quits office President Taft will have appointed 114 federal judges, a record unequaled in the history of the country. Not only has he been called upon to name five out of the nine members of the United States supreme court, but he has appointed 58 per cent of the 195 federal judges provided for by the statutes. There are 146 federal judges who enjoy life tenure and of that sort Mr. Taft has appointed sixty-five, or about 40 per cent. Mr. Roosevelt in his first term named forty-three life judges and in his second forty-one. Mr. McKinley named twenty-three life judges, Mr. Cleveland in his second term twenty-seven and Mr. Harrison forty-nine. The importance of the office of president in this matter of keeping the judiciary at a high plane is apt to be overlooked in the midst of political arguments and affiliations. The great bulk of President Taft's judicial appointments have been high-grade, honorable men. It is true that one of them, Archbald, of the United States court of commerce, has been impeached for conduct unbecoming of a judge, but Archbald had served on various benches for twenty-five years before President Taft called him to the commerce court, so he had an established reputation. It is not at all probable that President-elect Wilson will be called upon to appoint nearly so many judges as Taft, although there is a movement on foot to increase the number of members of the United States supreme court, so as to give the democratic president more power in this particular direction at this time.

The output of horseshoes in this country in 1912 was 110,000,000. From 1900 to 1910 the number of horses in the United States increased from 13,000,000 to 21,500,000, while their value during that period rose from an average of $42 a head to $96. In 1900 the government reported the mule population to be 2,250,000. In 1910 it had doubled. It is estimated that the number of work horses, not counting those on ranges, increased 465,000 last year.

It costs money to install a pressure tank water system in a farm home, but the one who goes to the expense will get more pleasure than he who keeps his money in a pile to look at. After all, what is the use of working early and late to get money just for money's sake.

You have demanded a more-mileage tire for country roads—and here it is

Diamond (No Clinch) Tires

made of Vitalized Rubber

You must have a tire tough and flint-like enough to fight the country roads, made of young, lusty rubber, elastic enough to absorb shocks, thus preventing rim troubles and breaking above the bead.

Fifteen years ago, when we built the first pneumatic Automobile Tire in America, we began studying the tire problem.

After countless laboratory tests and experiments our chemists have discovered how to scientifically toughen pure rubber by a new process—and you enjoy the benefit of this really wonderful more-mileage discovery—in Diamond Vitalized Rubber (No-Clinch) Tires.

Add to this the Diamond proved principles of construction—nothing inferior in rubber, fabric or workmanship—Perfect 3-Point Rim Contact, the No-Pinch Safety Flap, for inner tube protection—and you have as perfect a tire as money can buy.

So this time specify Diamond Vitalized Rubber Tires—you can get them of any one of the

25,000 Diamond Dealers always at your service

Diamond Vitalized Rubber Tires for Automobiles, Motorcycles and Bicycles

The guarantee on Diamond Tires becomes null and void when used in connection with any substitute for air, fitted to rims not bearing one of these inspection stamps or having had its serial number removed in whole or part.

I Guarantee to You

that this FOSSTON Automatic Combination Grain Cleaner and Corn Grader will grade your corn *better, cleaner* and *faster* than you can do it in any other way. This machine will absolutely clean your grain—grade your corn—make bigger crops—make you more money. Hundreds of users join me in saying that the FOSSTON is far and away the greatest cleaner and grader in the world—built for perfect work and long service, with heavier crops and larger profits sure to follow its use.

S. N. SORENSEN, President

FOSSTON

Automatic Combination CLEANER - GRADER

has a patented wheat gang that is positively the finest thing for cleaning wheat ever invented. It has zinc sieves; grain is *perfectly* cleaned and separated going through the mill *once*. This gang will not let a single wild or tame oat kernel slip through with the wheat, barley or rye in *one time through*. Ordinary fanning mills couldn't do the job so well running the grain through several times.

Free Trial 30 Days! Let us ship you a FOSSTON *at our expense;* use it 30 days *at our risk;* if you don't say then it's the great machine Mr. Sorensen claims it is, send it back—*also at our expense.* Learn more about the FOSSTON before you buy. Ask your dealer to show it to you. Write today telling us to ship one on free trial, or asking for booklet giving complete descriptions of every style.

City Style *Glide* Country Service for 1913

THE GLIDE "36-42" is the car for the country because its *quality* will withstand the hardest service over roughest roads. Yet it is the choice of particular city buyers also, because added to this structural quality it has the style, grace and superb finish to make it envied on the boulevard.

The simplicity and accessibility of its parts make the GLIDE practically trouble proof.

You don't ever have to pump the tires by hand! The new GLIDE Motor-Driven Tire Pump does away forever with all the tedious effort and hard work of hand pumping.

The GLIDE Automatic Dynamo *Electric-Lighting* System enables you to light all lamps with the turn of a button.

And there's no hand cranking of the engine to start. The GLIDE Self-Starter is *sure* of a spark, regardless of whether the points of the Magneto are together or not.

The GLIDE *Center Control* is simplicity itself and enables driver to get out of the car quickly and comfortably on either side. The left side drive means ease and safety of driving—you can see your margin of road ahead. The GLIDE is a car for women as well as men—convenient, safe, clean.

Write NOW for 1913 Bulletin

describing and illustrating the GLIDE "36-42" in detail, in both 2 and 5-passenger styles. Get your pencil out *right now* and drop us a postal before you forget.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED

HUSBAND AND WIFE—WILL.

A Subscriber, Wilbur, Neb.—(1) A widower who had one child married again, but there were no children by the second wife and the man died intestate, leaving real property in Iowa. What portion of this property would his widow be entitled to under the laws of Iowa? (2) Can a man will away his property in Iowa as he chooses?

Answer.—(1) The widow is entitled to one-third of the Iowa land, and the child to two-thirds of it. (2) An unmarried man can will his property in Iowa to whomsoever he chooses, but a married man cannot by his will deprive his wife of her lawful distributive share of his property. If he leaves descendants, the widow is entitled by law to one-third and if he leaves no descendant, she is entitled to half of his estate.

PERSONAL PROPERTY NOT FIXTURES.

A Subscriber, Mitchellville, Iowa.—A rented a farm to B. A furnished the hay track in the barn and B furnished fork, rope and pulleys. When not in use the rope and fork were taken down and put away. During the season A sold the farm to C. (1) Can C prevent B from taking away the rope and fork? (2) If not, can C compel A to replace them? (3) Can B remove a cistern pump owned by him which is not fastened to the platform?

Answer.—(1) He cannot. B has a right to remove from the farm the rope and fork at any time before his term expires or at that time. (2) C cannot compel A to replace the rope or fork, because they are not fixtures belonging to the place, but merely personal property belonging to B. (3) For the same reason B can lawfully remove the cistern pump at or before his term as tenant expires. It is a general principle of the common law (not found in the code of Iowa) that personal property not fixed to the land is not in the nature of fixtures and does not pass to the purchaser of the land when it is sold.

WAGES OF MINOR.

Mr. Chas. Swearingen, Kingsley, Iowa.—Our boy was hired to work for a man for seventy-five cents a day. After working a few days the man wanted to hire him by the month and the boy's mother sent word for the man to come and see his parents about it, but he did not come. I saw him several times in town while the boy was working, but he said nothing about it, and when school commenced we had the boy come home and go to school. He worked for the man two months and eight days and we charged the man $34.56 for it, but he refuses to pay more than $27.50. The boy is about fourteen years old. Several other persons offered $1 a day for the boy's work. What amount can we recover for the boy's work?

Answer.—You can recover seventy-five cents a day for the time the boy actually worked. That was the contract, and there was no other contract made between you and the man for whom he worked. There was no contract made by the month, it was only talked about, and the man is liable for seventy-five cents per day, for the time the boy actually worked.

PARENTS' RIGHT TO PROPERTY.

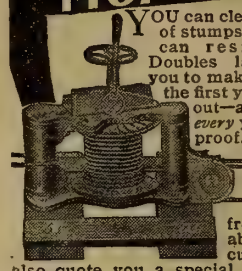
A Subscriber, Ashton, Neb.—My father and mother owned 160 acres of land worth about $12,000, and lots in town worth about $3,000. They deeded everything to the youngest son when he became of age, giving nothing to the other children. Father and mother are still living. What steps must the other children take to get a share of the property?

Answer.—They cannot get a share of the property by law. Parents have a right to give any or all their property to any child leaving nothing for other children if they choose to do so.

STALLION SERVICE FEES.

A Subscriber, Rolfe, Iowa.—A has owned a registered Percheron stallion for the last two years and kept him for public service, moving him about in the neighborhood as occasion required. During the season of 1911 bills were posted up stating the terms of servce, viz.: $12.50 to insure mare with foal, insurance to become due at once if mare was sold or otherwise disposed of. During the season of 1912 no bills were posted anywhere, not even on the stall of the horse. He was moved about as before and mares were served at the owner's farms, the horse returned at proper times to try the mares again. I bred

Pull 100 Stumps A Day—With The Hercules



YOU can clear an acre or more of stumps a day. No stumps can resist the Hercules. Doubles land value—enables you to make $1200.00 on 40 acres the first year after stumps are out—and $750.00 in crops *every* year after. Get the proof. Why not

BOX H STERLING, ILL.

P&O

LIGHT DRAFT PLOWS

THE draft of a plow depends nearly altogether upon the construction of the bottom, the shape of the share, the curve of the mold, and the position of the side plate. These necessary details must be worked out on a scientific basis, the secrets of which can only be discovered by actual experiments in the field. As the soil differs, so also must the shape of the plow. The greater the variety of soils the greater the number of plows necessary to meet the conditions.

P&O Gang Plow.

P&O Light Draft Plows have been on the market since 1842, and all the experimental work in designing plow bottoms was accomplished years and years ago. Today there is a P. & O. plow for every kind of soil, for every condition of these soils, in all standard sizes—walking, riding and engine gang, with every kind of attachment.

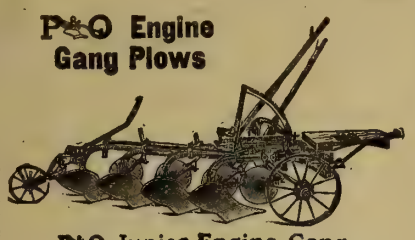
P&O Light Draft Plows are standard and supreme—made so by the use of the highest priced material, and our advanced methods of manufacture.

WE make no tools in which we take a greater pride than in the P. & O. Engine Gang Plows, made in several styles, both Mold and Disc, and in sizes from four to twelve furrows.

The P&O Mogul

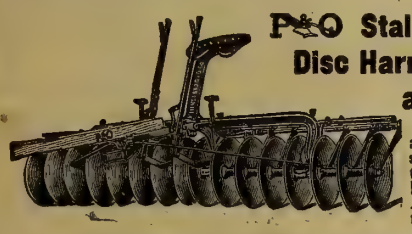
Is made with an individual lever for controlling each bottom. The levers all point to the center of the platform. This and five other patented features are exclusive, and cannot be found on any other make. The Mogul is made from five to twelve bottoms.

P&O Engine Gang Plows



P&O Junior Engine Gang.

The P. & O. Junior Engine Gang Plow is made for three furrows with a fourth bottom as an attachment. All bottoms are controlled with one lever. One man can operate both engine and plow. The P. & O. Disc Engine Gang is made with four or six discs, and with a platform for the operator.



P&O Stalk Cutters, Cultivators Disc Harrows, Corn Planters and Potato Diggers

We make a complete line of tillage implements, suitable for all soils and conditions. Remember that P. & O. Implements have been used by three generations of American farmers, and that everything we make is

Backed by an Unqualified Guarantee.

ASK YOUR LOCAL DEALER for P&O Implements and then insist on getting them. When you are ready to invest in farm implements, buy the best—the P&O line. We will gladly send P&O catalogs and other literature to any address. Write us your wants

Parlin & Orendorff Co., Canton, Illinois

CENTURY WARRANTED FOR 25 YEARS

three mares early and two late. The stallion was brought to my farm regularly until the three mares were known to be with foal. The last two mares were served but once and the horse was not brought again, but was sent to another neighborhood and put to work on a gang plow. I notified the owner to bring the horse and try the two mares, but it was not done and the two mares are not with foal, and I want to sell them. Can I be held liable for the service fee of these two mares?

Answer.—We think under the circumstances, you cannot be held liable for the service fees of the two mares which are not with foal.

ADVERSE POSSESSION—SIDEWALKS.

A Subscriber, Forest City, Iowa.—A has had actual and peaceable possession of about eight feet of a street in an incorporated town for the past thirty years. (1) Can the town council compel A to remove his cement walk and rebuild it within said eight-foot strip? (2) Have the town authorities a right to cut trees that are in the way of the sidewalk line?

Answer.—(1) The supreme court of Iowa has decided that mere possession or occupancy of land belonging to a city or town with full knowlege of the occupant that he has no color of right thereto does not give him any prescriptive right or title by adverse possession, therefore the town council can compel A to remove his cement walk and rebuild it within the eight-foot strip. (2) The town authorities have a right to cut and remove trees which are in the way of the sidewalk line.

RIGHTS OF CROPPER.

Mrs. ———, Maxwell, Iowa.—Last spring I rented to a neighbor four acres of land on which he raised corn. He is not living on the land. Can he hold the stalk ground until the first of March, 1913?

Answer.—Your neighbor is a mere cropper tenant on the four acres. Under the laws of Iowa his term as tenant expires when his crop is harvested or gathered, and not later than the first day of December, 1912. He has no right to pasture the ground at any time. You have a right to take possession of the ground at any time after December 1, 1912.

PERSONAL PROPERTY—NOT FIXTURES.

A Subscriber, Mitchellville, Iowa.—B rents a farm in Iowa owned by A. The hay track in the barn is furnished by A. B furnishes the rope, fork and pulleys. The rope is taken down when not in use. During the season the farm was sold to C. (1) Can B remove the rope and fork when he leaves the place? (2) If so, can C compel A to replace them? (3) Can C prevent B from removing the cistern pump which is owned by B and not fastened to the platform? (4) If B gets a bill of sale for the articles mentioned, must it be dated at the time of purchase?

Answer.—The rope and fork are not fixtures belonging to the farm, but merely personal property owned by B, and he has a right to take them away when he leaves the place. (2) C cannot compel A to replace them. (3) He cannot. The cistern pump is also personal property belonging to B, which he can remove when his term expires. (4) It is not necessary for B to get a bill of sale for the articles, but if he does so it should be dated when purchase is made.

AUTO AND DOGS—ACCIDENT.

A Subscriber, Perkins, Iowa.—A keeps two dogs which are a nuisance to auto drivers on the public road. A has been warned twice to keep his dogs off the road, but pays no attention to it. In going to town in his auto B has to pass A's place. If B should have an accident on account of the dogs, could he recover damages from A? Has B a right to shoot the dogs?

Answer.—B could recover damages for an accident caused by the dogs, but he has no right to shoot them. The dogs are more likely to meet with an accident than the auto.

COLLECTION OF DUE BILL.

Mr. Clark Lane, Prophetstown, Ill.—I have a due bill from an Iowa seed house with a previous agreement to return seeds if not satisfactory. Payment of the due bill has been refused. How can I collect it in money without suit?

Answer.—There is no way by which you can enforce payment without suit. You might send the due bill to some collecting agency in Iowa, and see what it could do about collecting it.

MONEY SUBJECT TO TAXATION.

A Subscriber, Milton, Iowa.—Where a person has money in the bank which draws no interest and must be checked out soon, is the money subject to taxation in Iowa?

Answer.—Such money is subject to taxation, but the person may have deducted therefrom the amount of debts which he actually owes.

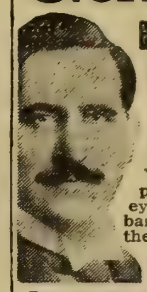
Galloway



Invites You to Enjoy Yourself at His Expense

Right now's the time, boys, to take that little trip to Waterloo. You've got the time, and it will pay you big to see with your own eyes the wonderful money-saving bargains to be snapped up right in the big Galloway factories. Bill says

"Come to Waterloo"

Be my guest at my expense. Whether you stay a day or a week, I'll entertain you at our $60,000 Agricultural Club, planned and built for the comfort and pleasure of my Farmer friends. Over 500 here last week had a ripping good time. Some bought; some didn't. It doesn't matter. You're under no obligations whatever to buy.

See My Big Factories!

A great sight! Worth traveling many miles to see. I will show you through an enormous chain of factories—largest in the world selling direct to farmers—hundreds of men turning out a flood of Engines, Spreaders and Cream Separators where only a few years ago was a cornfield on the edge of Waterloo. Don't miss this!

I Will Expect You Sure!

Now, don't disappoint me. I'll look for you and will made your visit a big surprise. You'll go back and tell your friends: "I never had such a fine vacation." If you can't come just now, write me why.

Chalmers 1913
MOTOR CARS

Made in Chalmers Shops

Let's Reason Together —*About Price*

To you who are considering buying a motor car, we want to offer a few suggestions on the subject of price. They are based on the experience of thousands of buyers.

First of all: Buy a real car. Don't economize too closely on the purchase price. Economy is not merely spending the least money. And buying an automobile at too low a price is the worst economy in the world.

If a man is going to pay $1000 for a motor car, he surely is not so pressed for funds that he could not add enough more to that $1000 to get him a really high grade motor car—a car of genuine quality. The additional cost, distributed over the years he will use the quality car, is nothing compared to the satisfaction of owning it from the start.

If you don't get a car of real quality to start on, you will surely want one later. Many who purchase low priced cars graduate from what they buy to what they should have had to begin with. But in doing this they pay from $300 to $600 for so-called "automobile experience."

You don't need this costly experience. Save the money. Buy a quality car to start with.

Examine the 1913 Chalmers "Thirty-Six" at $1950, fully equipped, and see if you really are not money in pocket by laying out the extra few hundred dollars in the original purchase price rather than buying a car at a lesser price only to trade it in later on at a big discount.

Note these splendid features of the 1913 Chalmers cars:

Electric lights, Turkish cushions, Nickel trimmings.
4-forward speed transmission, 11-inch upholstery.
New flush-sided bodies, Chalmers self-starter.
Demountable rims, Long stroke motor, Big wheels and tires.
Carburetor dash adjustment, Speedometer.

"30" (4 cyl. 30 h. p.), $1600 "Thirty-six" (4 cyl. 36 h.p.), $1950
"Six"(6 cyl. 54 h. p.), $2400
(*Fully Equipped. F. O. B. Detroit*)

Chalmers Motor Company
Detroit, Mich.

This monogram on the radiator stands for all you can ask in a motor car

Here's where *you* come in—send us the name and address of the man who has charge of the roads in *your* neighborhood and we will put *you* on our subscription list for a year. Thereafter you will receive Highway Magazine regularly every month for twelve months, FREE.

Here is your opportunity to get a splendid magazine at the cost of only one cent. Send today your name and address on a postal card so that you may receive the issue that is coming out next month. Address

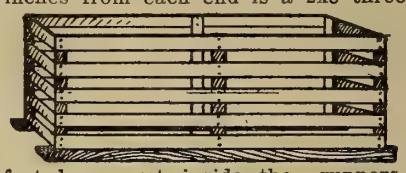
Publisher THE HIGHWAY MAGAZINE, 529 Walnut St., Cincinnati, Ohio

HINTS·SUGGESTIONS·DEVICES

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

A PORTABLE MANGER.

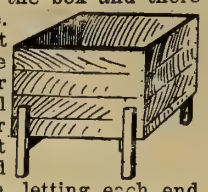
Here is a portable manger that one farmer has found very beneficial in feeding hay, fodder and other roughness about the farm. Of course it saves waste resulting from feeding on the ground. In one season this manger will pay for itself in feed that is saved. If it can be made of oak boards, so much the better, as it will last much longer. The runners are 2x8-inch stuff, fourteen feet long. Shaped at the ends like a sled runner. Six inches from each end is a 2x8 three



feet long, set inside the runners. A third 2x8 is spiked inside the runners at center. On top of end and center braces are nailed 2x4s flat side down. In each corner a 2x4 upright two and a half feet high is made stationary, also one at center of each side. Three four-inch boards are nailed to the uprights. Holes are bored in the ends of the runners and heavy wire inserted to which single tree is attached whenever it is desired to move the rack about on the farm.

A Box Hay Manger.

Perhaps there is a large box about the place that could be converted into a hay manger. Instead of throwing the hay on the ground for horses or cattle, when feeding outside of the barn throw it into the box and there will be no waste. Set two pairs short posts into the ground the proper distance apart. Nail a 2x4 to each pair the proper height from the ground



and set the box in, letting each end rest on a 2x4. Nail the bottom of the box to the 2x4s beneath. If this is located beneath the shade of a tree, it will be a good place to feed on a hot summer's day instead of in the barn. A horse could eat grain from the box as well as hay.

A Dog House.

The farmer who has a faithful dog should care for him, so that the dog will not suffer in the cold weather and always have a good place to sleep. A convenient house for a dog can be made with but little effort or expense on the part of the farmer. A house 3x4 feet will be large enough. It can be set on the south side of some building where it may be protected from the storms. A little straw or some old rags will furnish a good bedding. The frame of the house can be made of 2x2-inch material and the cheap grade of siding will answer the purpose. The farmer will get a good deal of satisfaction in knowing that the dog that saves him so many steps in the day time and guards his home at night is comfortable in the cold weather.

Some Convenient Water Gates.

A good plan for a water gate is to have two swinging gates made the desired width and length out of four-inch lumber. These can be easily swung to a pole spanning the stream and resting on either bank. When the water is of considerable depth in the stream after a freshet the gates will swing out by the force of the current and let the water pass, then swing back to a natural position after the stream goes down. Another gate may be made by boring inch-and-a-half or two-inch holes in the pole spanning the stream and inserting stakes in these, their length depending on depth of stream. The lower ends of stakes may be inserted in holes bored in a two-by-four-inch piece. The force of the current will turn the pole and elevate the stakes to permit the water to pass. By setting the pole in the bottom of the stream, stakes may be placed so that they will project upward. No piece should be put across their ends, but it will be a good plan to sharpen the stakes. When the current of water strikes them it will turn the pole and water and all trash will pass over. One must make the pole secure and be certain to turn the pole so that stakes will be perpendicular after freshet.

ILLINIOS LIVE STOCK BREEDERS MEET.

A most interesting and largely attended meeting of the Illinois Live Stock Breeders' Association was held at Springfield, February 4th, 5th and 6th. This association, which is comprised of the horse breeders' association, the cattle breeders' association, the swine breeders' association, the sheep breeders' association, the cattle feeders' association, and the dairymen's association, has had a growth in the past few years, and the attendance this year of about 300 was very gratifying.

The meeting opened Tuesday morning, and after the president's address had been listened to the session was turned over to the members of the Illinois Cattle Feeders' Association, Deane H. Funk presiding, and E. P. Hall, Mechanicsburg, who had the champion car lot of steers at the last International, read an interesting paper on "Feeding the Champions." The afternoon of the first day was given over to the Illinois Horse Breeders' Association, with Theodore M. Smith presiding. Two interesting papers were read, one "The Development of the Draft Foal," by Don Robinson, of Pekin, and the other "One Phase of the Mule Business," by Ira Sharp, of Sharpsburg. Following the discussion of these papers Dr. J. H. Jensen, Kan-

sas City, Mo., read a very interesting and exhaustive paper on the recent horse epidemic among western horses. A tuberculosis demonstration was held late in the afternoon, and in the evening Walter Williams, LL. D., dean of the school of journalism of the university of Missouri, delivered a lecture entitled "On the Sky Line of the State."

Wednesday morning's program was opened by the Illinois Sheep Breeder's Association, and A. J. Knollin, Chicago, contributed a most exhaustive paper on the different phases of the sheep industry. Following the sheepmen the Illinois Cattle Breeders' Association held the floor, with A. A. Armstrong, of Camargo, presiding, and A. Renick, general manager of the American Short-horn Breeders' Association spoke on "Pure-Bred Cattle on the Farm," while J. F. Prather, of Williamsville, talked about "Cattle as a Factor in Increased Crop Production."

Wednesday afternoon the session was taken up by the Illinois Swine Breeders' Association, with W. S. Corsa, of Whitehall, in the chair. Dr. M. Dorset, of the United States Department of Agriculture, delivered a very interesting talk on "Legislation Relating to Hog Cholera." followed by a general discussion of the hog situation and the value of the vaccination process as a preventive of hog cholera.

The meeting closed with a banquet in the evening at which President Phil Haner was toastmaster, and addresses were made by A. J. Lovejoy, R. J. Stone, W. S. Corsa, J. J. Ferguson, Hon. H. S. Magill, Prof. W. C. Coffey, Harry M. Snape, secretary of the Springfield Commercial Club, and C. R. Taylor.

One of the closing acts of the association meeting was the adoption of a resolution looking toward the enactment of legislation that will prevent Illinois being, as at present, the dumping ground for diseased stock. The committee on legislation was instructed to work for laws excluding diseased cattle from Illinois, and requiring all breeding cattle to be examined when shipped and again when they enter the state.

Officers for the ensuing year were elected as follows:

Illinois Live Stock Breeders: President, Phil S. Haner, Taylorville; first vice-president, J. W. Garvey, Thayer; second vice-president, F. P. Springer, Springfield; third vice-president, R. J. Stone, Stonington; secretary, B. T. Abbott, Morrison; assistant secretary, Dr. A. T. Peters, Springfield; treasurer, Charles R. Taylor, Williamsville; executive committee, J. E. Caldwell, Williamsville; Charles R. Taylor, Williamsville; E. C. Stone, Peoria; A. J. Lovejoy, Rockford; W. S. Hanshine, Urbana; Eugene Funk, Shirley.

Illinois Cattle Feeders' Association: President, Clyde Ford, Geneseo; secretary, H. P. Rusk, Urbana.

Illinois Horse Breeders' Association: President, Theodore M. Smith, Auburn; secretary, I. A. Sinclair, Cornell.

Illinois Sheep Breeders' Association: President, R. J. Stone, Stonington; secretary, Grant Fowler, Armstrong.

Illinois Dairymen's Association: President, J. P. Mason, Elgin; secretary, W. G. Cavan, Chicago.

Illinois Cattle Breeders' Association: President, Rank C. Forbes, Henry; secretary, D. J. Hickey, Bradford.

Illinois Swine Breeders' Association: President, G. L. Burgess, Bement; secretary, J. Y. Caldwell, Williamsville.

The 1914 meeting of the association will probably be held in Peoria.

IMPROVEMENT OF HIGHWAYS.

A matter touching vitally the agricultural, commercial, educational, social, religious and economic welfare of Illinois, and involving the conservation of natural resources is the question of good roads. In the improvement of public highways Illinois has been backward.

Reports of the federal department of agriculture show that about 10 per cent of the 95,000 miles of Illinois roads are improved in a permanent manner, as against 38 per cent in the neighboring state of Indiana, 20 per cent in Wisconsin, 20 per cent in Kentucky, 28 per cent in Ohio, and 50 per cent in Massachusetts. Considered from the standpoint of improved roads, Illinois is the twenty-fourth in the list of states.

The loss to farmers because of inaccessible primary markets and the abnormal expense of transportation due to bad roads must be considered as a contributing cause of the high cost of living. In some Illinois counties highways are impassable to ordinary loads for a full third part of the year.

Bad roads not only hinder crop production and marketing, but they keep the rural consumer away from the store of the merchant for weeks at a time. They keep pupils from the schools and voters from political gatherings and from participation in elections. They impair the efficiency of churches and social, fraternal and other organizations which depend largely on public gatherings for the efficacy of their work.

Bad roads contribute to the unattractiveness, the isolation and the monotony of country life that are responsible for the desertion of rural pursuits, especially by the young. Experts in mental ailments agree that women in remote sections are the chief sufferers from the restriction of communication and social intercourse which bad roads impose.

Highway conditions in Illinois are due to the fact that progress in methods of transportation and travel has not been met with corresponding changes in our system of road building and maintenance. Illinois clings to the obsolete practice of placing the burden of highway improvement on the townships. Other states in their laws have appreciated that highway travel is no longer entirely local and that the main arteries carry a great amount of inter-county and interstate traffic. Permanent improvement of the main arteries, which carry the great bulk of traffic, is a problem which affects the general welfare, and these states have established successfully systems of state aid on such highways.

I recommend for your consideration legislation which will promote the efficiency and economy of the administration of the road system of the state. This legislation, I believe, should incorporate provisions for state co-operation with counties and townships in the construction of main highways and bridges; and the proper maintenance of all roads after they are built; for the compulsory dragging of all dirt roads, and for the use of the state automobile tax as a nucleus of a fund for such state aid. —[Governor Dunne, of Illinois, in his inaugural address.

IMPROVING OUR DRAFT HORSES BY MEANS OF COLT SHOWS.

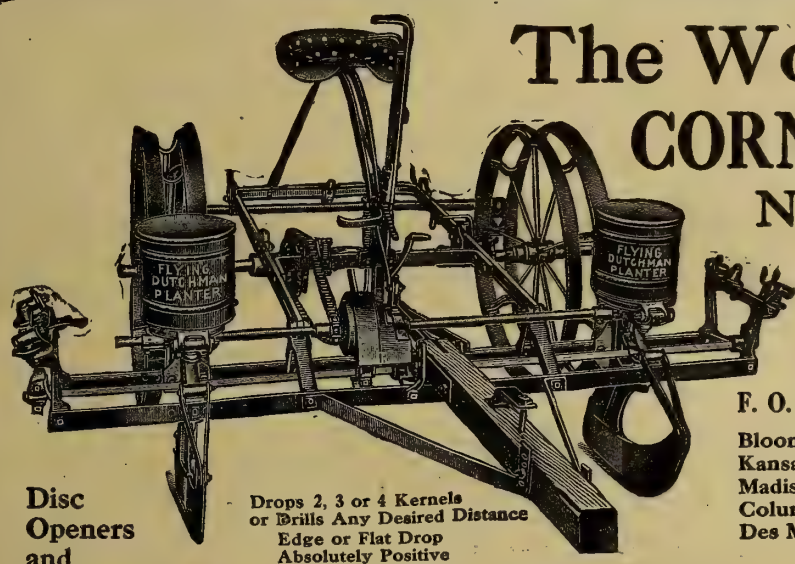
(Continued from page 3.)

put into a clean, disinfected box stall, and given needed help. Many foals which are vigorous at birth are ruined through inattention during the first few days of life. The navel cord should be disinfected immediately with strong corrosive sublimate, made up by mixing two grams of the powder in a pint of boiling water. When it has cooled two drams of tincture of iron are added. The solution should be labeled "poison." The external organs, tail, and hind parts of the mare, including udder, should be washed daily for the first week with a 2 per cent solution of some coal-tar disinfectant. The intestines of the foal too should be promptly cleared of the sticky meconium they contain at birth. Few really feed a colt properly. They let it run with the mare, and expect it to thrive on milk and grass alone. As a matter of fact, the colt must be well fed on nutritious food so as to grow rapidly. Gains are never made cheaper than when the animals are young. Grain is absolutely imperative.

The Australian ladybird beetle came into California to destroy the white scale in the late '80's, and this was followed by the carriage of the same species of beetle, with equally good results, to Portugal, to Italy, to South Africa, and quite recently to Formosa, in all cases destroying the same scale insect. Another instance was the importation from Autralia of certain parasites of the sugar-cane leaf-hopper into Hiawaii, which is said to have resulted in the reduction of the leaf-hoppers to a negligible quantity. A gigantic experiment of the same kind is now being carried on in the importation of the parasites and natural enemies of the gispy moth and the brown-tail moth from all of Europe and from Japan into the New England states. A number of species have already been introduced and acclimated, and admirable results are expected from this work.

"An old-fashioned wood chopping was held at the home of Aunt Jane Thatcher near Smithville, a few days since," says the Liberty, (Mo.) Tribune, "the neighbors assembling and while the men piled high the stove and hearth wood the women folks were preparing a big country dinner. Time was when this was a common event in the country, but wood has become so scarce that enough cannot be gotten together to make an hour's chopping for a few lusty young fellows."

A bill has been introduced in the Nebraska Legislature to prohibit turkeys from running at large.



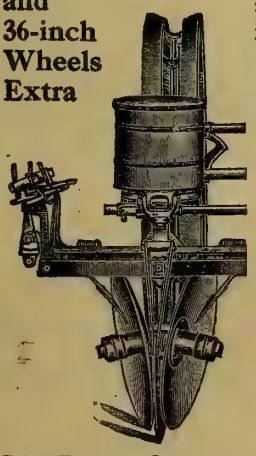
The World's Best CORN PLANTER NOW $35.00

F. O. B. Factory or Our Warehouse at

Bloomington, Ill. — Indianapolis, Ind.
Kansas City, Mo. — Toledo, Ohio
Madison, Wis. — Omaha, Neb.
Columbus, Ohio — Minneapolis, Minn.
Des Moines, Iowa — Sioux Falls, S. Dak.
St. Louis, Mo.

Drops 2, 3 or 4 Kernels or Drills Any Desired Distance
Edge or Flat Drop
Absolutely Positive
Perfectly Accurate
2 Full Sets of Plates

Disc Openers and 36-inch Wheels Extra



Disc Furrow Openers can be had if desired at a small additional cost.

No matter how much you pay for a Corn Planter, you can't get as good a Planter as the Flying Dutchman, which now sells for $35.00 Cash. For accuracy of drop, durability and general satisfactory work you can't equal it at any price.

The reason why we can make this extremely low price is that we figured that could we double the output of our Planter department, we could materially reduce the manufacturing cost. This we have accomplished and have kept this department running continuously since corn was planted last year, while most other factories were shut down. We are now giving YOU the benefit of our saving in the cost of manufacture.

"The Planter Without A Fault."

The Flying Dutchman Planter is known by the army of farmers who are using it as "The Planter Without a Fault." It actually gives faultless service, year after year under any conditions.

It drops 2, 3 or 4 kernels in a hill with positive and unvarying accuracy and can be instantly changed from one to another while the planter is in motion, thus planting the proper number to meet varying soil conditions—insuring a big crop.

No matter how slow or how fast you drive, the seed is always dropped in perfect check and never scattered.

It is very simple in construction—a small boy can easily understand it—not a thing to get out of order or cause delays—always accurate and ready for use.

It is so well made that it will last longer and give better service year after year than any other planter.

Edge drop or flat drop—whichever you prefer—can be changed instantly by simply changing the plates or can be instantly changed to a Drill without the driver leaving his seat.

If you pay more than $35.00 and freight for a Corn Planter you are simply throwing money away because you can't equal the Faultless Flying Dutchman at any price.

Write today for our FREE BOOKLET showing Planter in colors.

MOLINE, ILLINOIS

"Available" Plant Food

A good season, with normal sunshine and rain, good seed and cultivation will produce good crops; but with these advantages in the crop's favor it can do much better if well provided with **available** plant food. Bumper crops need more food than ordinary crops. They need it while they are growing and making heavy demands on the soil, which cannot supply it fast enough. Whatever the soil contains is chiefly in unavailable form. The crop cannot wait for it to become available, **except at your expense.** A stunted crop makes no profit. The answer is "apply the **available** plant food" in

EMPIRE FERTILIZERS

These fertilizers supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address early for prices and terms,

EMPIRE CARBON WORKS
429 Locust Street, St. Louis, Mo.

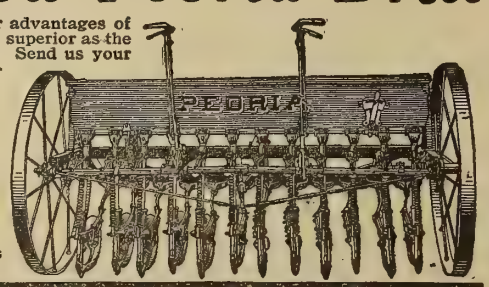
The Only Drill That Sows Grain in Any Kind of Soil—at a Proper, Even Depth

Think what it would mean to you to have *every* seed count and to have *every* stalk come up *evenly* and at the *same time.* You can easily accomplish this—with The New Peoria Drill equipped with our famous Disc Shoe Furrow Opener.

It combines every advantage of the single disc for cutting trash and penetrating hard ground, with every advantage of the shoe for forming a furrow and depositing the seed. The Disc Shoe Furrow Opener is the *only* one that sows every seed at an *exact, even depth,* in a *packed furrow.* No seed touches the disc and no dirt falls back into the furrow until *after* the seed is deposited. No practical, progressive farmer can fail to see the many money-making and money-saving advantages of this wonderful Disc Shoe Furrow Opener—found *only* on

The New Peoria Drill

There are also many other advantages of this drill, each one just as superior as the Disc Shoe Furrow Opener. Send us your name and address on a postal now for catalogue and all details of construction. Let us prove to you that it will pay you to discard even a new drill in order to buy and use the New Peoria. Will you spend a penny for a postal *now* to get all the facts? Address,



Peoria Drill & Seeder Co.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

HOW I RAISE BUMPER CROPS OF SWEET POTATOES.

To the Editor of The Homestead:

I always select a hillside of a southern exposure when ready to make a hotbed. Lay off a diagram of the bed, making it five feet in width and as long as is wanted. I usually make the beds about seventy-five feet long. After a diagram of the bed is laid out take boards six inches wide and one inch thick, set them up on edge around the diagram of the bed, making them solid in place by driving staves of wood eighteen inches in length down in the earth on each side of them. Now spade out about five inches of the earth, piling it up against the boards on the outside. This pile of dirt will drain the surface water off before it comes in contact with the bed. Next put about four or five inches of good, fresh stable manure in the bed, tamping it down solid, and if the manure is not wet it is best to give it a good sprinkling of water. Then spread a coat of earth from the field about an inch thick over the bed. We must now go to the forest and get a load of good, loose, rich soil or leaf mold, and spread a coat of about two inches over the bed.

On selecting seed I always choose potatoes as near the same size as possible, with a smooth, fine grain, free from disease and from two to three inches in length and about one and one-half inches in diameter. To insure a quick slipping of the seed we must rub off all the sprouts before bedding them, the reason of this being that if the tubers are bedded with sprouts on them these will die and thus delay the slips. If the sprouts are taken off before bedding, there will be no time lost.

In placing the seed in the bed we must leave plenty of space between the tubers to insure a good, strong, thrifty plant. If we put the seed too close together, the plants will be thin and sickly, and will not do well. While on the other hand, if given plenty of spacing in the hotbed the plants will be strong and thrifty and will grow much better after transplanting. When the seeds are all properly arranged in the bed, spread a coat of three or four inches of good, loose, rich soil from the forest over the tubers.

The covering for the bed may be either glass or canvas, the canvas being much the cheaper. If canvas is to be used we must put in a ridge pole. Then stretch the canvas leaving three and one-half feet exposed to the south and one and one-half feet exposed to the north, the reason is that the canvas thus arranged will turn water much better than if given a full five-foot slant one way.

I bed my sweet potatoes in the spring season just as the forest is putting forth her foliage, and then the plants are ready to be transplanted in from ten to eighteen days, when the weather and the earth are warm and ready for the young plants to grow. We must not transplant too early in the season when the nights are yet cool, else the ants and other insects will destroy the vitality of the plant.

For the potato field I always select a field of a southern exposure and where the soil is not too strong. If the soil is too strong the tubers will be rough and of odd shapes, which are unfit for market. I think a field where corn has been cultivated the previous year is an ideal place for sweet potatoes. Pull the stalks and roots and remove them from the field. Break the ground as early as it is dry enough in the spring. Let it lie until about a week or ten days before you are ready to transplant. Then cultivate the surface and rebreak. Cultivate the surface again thoroughly. The sweet potato field needs lots of cultivation before planting. I make my potato ridges with a disk cultivator, making them eighteen inches across and ten inches high, after they have settled two or three days they are ready for the plants. The ridges should be made three and one-half feet apart

A Valuable Free Book on CLOVER

A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." This book is truly a most remarkable source of information on the subject of clover raising. For the first time the opinions and experiences of the world's greatest clover authorities and practical growers have been gathered together in printed form. Every question you can think of is fully answered. It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and more milk—that puts immediate cash money in your pocket. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; it tells all about the causes of "clover sickness" and how to deal with it. These and hundreds of other questions are answered, covering sixteen clover varieties, including Red, Mammoth, Crimson, Alsike, Sweet, White, Yellow, Japan, Berseen, Burr, Serradilla, etc.

This book is a gold mine of information to the farmer who is looking for bigger and better results. Ordinarily this book is sold for 35 cents per copy, but for a short time we will mail a free copy, postage prepaid, to the readers of this paper, or until a certain number have been distributed. If you will write at once you will be sure of getting a copy by return mail.

GALLOWAY BROS.-BOWMAN CO., BOX 108 M WATERLOO, IA

Great New Everbearing Macatawa Blackberry

This year you should grow berries. It's the thing that pays in commercial fields and in gardens. And to make your work count for the most, grow the heaviest yielders, the biggest, meatiest, best-flavored berries.

Macatawa Blackberry has all these qualities, and more. It's a brand-new sort, a cross of Eldorado Blackberry and true Giant Himalaya Berry. The berries are extraordinarily large—3½ inches around one way, by 3½ inches the other. They begin to ripen July 1; the big pickings come just after July 1, and you get ripe berries until frost.

Berries are sweet even when green, free from core and seeds, meaty and altogether delicious, wonderfully good to look at, and just as good to handle, to ship and to eat—high-priced and profitable.

Plants Begin Bearing the First Year

and yield immense crops afterwards. They are absolutely hardy in 40 degrees below zero. Macatawa plants $1 each, or 6 for $5. Only 6 to one person.

Send today for the 1913 Berrydale Berry Book. Full of valuable Berry information. Contains true descriptions of the Macatawa Blackberry, of Himalaya Berry and many other profitable berries you ought to grow in your garden or fields. Let me have a card for the book today.

GREAT NORTHERN SEED CO.
361 Rose St. Rockford, Illinois

and the plants set from twelve to eighteen inches apart in the ridge, according to the strength of the soil. If a second crop of slips is to be pulled from a bed, we must be very careful in removing the first crop of plants. We can hold the tubers firm in the bed with one hand, and in this way it will save bedding the seed a second time, and the second crop of plants will come on several days earlier than if otherwise handled. The young plants should be transplanted within a few hours after they are removed from the bed. The soil should be in good working condition at the time of transplanting, but not by any means wet. Some people have a practice of wallowing the roots of the plants in mud before transplanting, but this is a mistake and should not be done. They should be transplanted just as they come from the hotbed. After transplanting we must not wait for the plants to start to growing before we cultivate, else they may be a long time starting to grow. When they have been transplanted a week or ten days they should be cultivated regularly once or twice a week, according to the season, until the plants have bunched and started out two or three vines from eight to ten inches long, when they are ready to lay by, leaving a good, large ridge somewhat larger than at the time of transplanting. J. A. S.

Illinois.

PREPARE FOR A DRY SUMMER.

No one can say that the coming summer will be a dry one, but this winter up to February fifth has been remarkable for a very light precipitation. It sometimes happens that a twelvemonth has the same general trend in weather.

The fruit grower may be now doing some things to guard against ill results, of a possible dry season, and the work so done will be no injury in any event.

Let young apple trees be liberally mulched, with straw manure if that material is available. If not to be had use old straw stack bottoms. Put it on deep, say six inches and for three feet about the trees, and it will retain what moisture we may have from spring rains and carry trees safely through a hot, dry season.

Also groves of young forest trees, either one year set, or to be planted the coming spring may be saved by the same kind of an application. In this case cover the ground completely, between the little trees, to a depth of six inches being careful to tramp it down closely along the rows. Some will say, I can conserve moisture by constant cultivation, and the dust mulch. True, you may do that, and yet the mulching plan, if thoroughly carried out, is just as effective in checking weed growth, and securing a rank growth of the young trees. And the mulching plan is the cheaper, we have tried both systems enough to have a decided preference.

Prepare for a dry season among the current and gooseberry bushes in the same manner a heavy mulching of manure or straw. But in case you can obtain coal ashes it is a good plan to apply them about half and half with the manure. These ashes are cooling, will retain moisture, and assist in the rotting of the manure, and at the same time will discourage weed growth. Current bushes so treated will have fruit one-third larger than bushes which stand year after year with no such aids to growth, and productiveness.

Raspberry bushes are another fruit bearer which suffer severely in dry weather. The fruit is greatly reduced in size, and much of it becomes seedy and not worth gathering, much of it drying up before ripening. This result is a needless disappointment, when right steps are taken to prevent it. No matter what system of culture you practice, you must take special pains to ward off drouth injury. If so situated that you cannot obtain straw, or manure, in sufficient quantity, you must practice the constant culture system. This makes it necessary that you keep the bushes in close rows, if not in hills. If you can get the straw at reasonable prices try the change of a heavy mulching this year. See for once if it is not cheaper and productive of better fruit than the old system. But remember always, that the job must be thoroughly done. You cannot scatter a little manure hastily and call them mulched. Put it on six inches thick and tramp it down about and in the hills.

Mulching pays better nowhere, than in the blackberry patch. From the nature of the bush it is difficult to keep this fruit in narrow rows. Many large blackberry growers do this, especially in sections where it is necessary to lay down and cover for winter protection. But in sections where the canes will stand the winter changes without injury the "go-as-you-please" system is productive of better results, meaning that the fruit

Sworn Farm Yields not Test Yields

~Oats~
259 Bushels per acre

~Alfalfa~
$2,500.00 from 30 acres, on Ex. Gov. Hoard's farm, (Wisconsin)

200-400 Bushels per acre

~Corn~
75 Bushels per acre

Four Big SALZER Crops

Rejuvenated White Bonanza Oats
Great weight, earliness and production. Suitable for almost any soil.

Alfalfa
99.85% Pure.
Government Test
99% Germination.

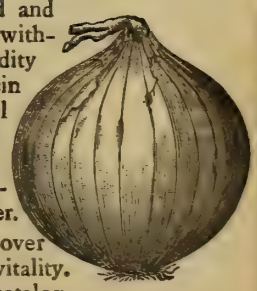
Earliest Six Weeks Market Potato
10 days earlier than Early Ohio, etc. Greatest general purpose potato. Good for midsummer, good for late summer—keeps all winter.

Silver King (Wisconsin No. 7), also Wisconsin No. 12
The Corn that put Wisconsin on the Corn map.

Bumper Crops True to type. True of all Salzer Seeds. Down in Texas, Alabama, Florida and throughout the South, Salzer northern-grown seeds were the greatest 1912 crop producers. In the Northwest enormous yields followed the sowing of Salzer's Seeds. In Central, Eastern and Western states, Salzer Seeds produced bumper crops. No matter where you live, you can **succeed with Salzer's Seeds.** Write your order today, now, while you are thinking seeds. Salzer northern-grown grains possess greater vitality, stronger producing quality, than any grown further south or east.

Salzer Alfalfa Clover will grow in every state of the Union, north, south, east or west.

Salzer's Seed Barleys, both bearded and beardless. We are headquarters on barleys and without question are the largest growers of this commodity in the world. We make a specialty of Wisconsin Pedigree Barley, introduced by the Agricultural College; also Oderbrucker Wisconsin No. 55; also of Salzer's Famous Silver King Barley, which has the enviable record of being the heaviest producer of any barley before the American farmer.



Salzer's Onions are known the country over as great "croppers," true to type, highest vitality. Five pages devoted to onions in our great 1913 catalog.

10 Big Sample Packages 10c

Real packages of real seeds, including Alfalfa, Bonanza Oats, Silver King Barley, Marquois Spring Wheat, Speltz and five other great yielders. Now is the time to send in your dime. Do it now. Write right away. We are

America's Largest Growers of Farm Seeds

Clovers, Grasses, Oats, Rye, Barley, Wheat, Potatoes, Seed Corn, Onions, Peas, Beans, Tomatoes, etc. All seeds are grown under our eye and our care. We own and operate large farms for the production of our seeds. No seeds leave our warehouse before being thoroughly twice tested, first on our trial grounds for trueness of type, and then as to vitality.

Catalog and Premium List Free. Bigger and better than ever. 140 pages. True illustrations. Full of valuable information. Amount of seeds required to plant an acre and smaller areas. Table of weights. How to prepare ground for various crops. A postcard will bring it, or will be sent free with every order for 10 big sample packages, if you ask for it.

SEED OATS, Reg. Swedish Select. CLOVER, Med. Red. Ask for samples and prices. Address H. D. CLORE, Lucas, Iowa.

crop is produced at a less cost per quart.

This system permits the bushes to occupy the whole ground, as far as can be expected, for blackberry sprouts space themselves pretty well. Under this plan paths must be cut at regular intervals, big weeds must be kept down, and the old brush cut out. But in a dry season this style of plantation will need mulching as certainly as the other. It will more surely need it, because cultivation will be impossible. If the weeds, old stalks, and clippings have been left to decay upon the ground, and this is usually done where there is no disease in the patch, the mulching material is in part supplied. But it will be well to reinforce this with straw well scattered, and spread out from the alleys, among the bushes. If you do this you may await the assaults of drouth with considerable confidence that you cannot have a complete failure.

M. E. Hinkley.

REPLANTING AN ASH GROVE.

A reader of this paper who is located at Curlew, Iowa, writes as follows:

I have a good grove of black ash and soft maple, now twenty-five feet tall. Some have died out. Would young trees grow in the shade among those tall trees? Which is the best, black or white ash? And how should the seed be planted, deep or shallow?

These questions touch some interesting points which many of our readers will be glad to have explained.

This subscriber says that the rows are ten or twelve feet apart, but he does not say how close the trees are in the row. We assume that they are much closer, probably two to four feet. Now think for a moment of the probable reason why some of the trees have died. Trees require considerable moisture, and room. When a close-planted row starts growth, they may all be of even size, but in two or three years some of the smaller ones have stopped growing, and in a little time more, they will be dead. Why? Because they were overcrowded, and starved to death.

The chances are ten to one that this is the case with your present grove, and if so would you think it of any use to plant new trees in place of those starved out? Decidedly not. You had much better plant the new trees, in a new grove, by themselves.

We would advise you to plant the green, or white ash, which is the more common along our prairie rivers and lakes. The black ash—true black ash—is an inferior tree, and less valuable at any stage of growth than the white ash. The white ash will grow large enough for a reach, or a sled tongue, while black ash of the same age, will only do for fish poles.

Ash trees are easily grown from the seed, and as the seed is usually very plentiful, they may be grown in any desired quantity. Gather the seed in October or November, better do it early as soon as ripe, for it wastes—blows off—during the fall storms. Have the ground prepared as for corn planting, well plowed, and pulverized. The rows may be about two feet apart. Make a drill, or furrow, not over an inch deep. Scatter the seed in this so that they touch. Cover with mellow earth, and roll down, or press down with hoe. Early in the following May the young plants will appear, about the same time that the ash trees begin to leaf out. If you cultivate these seedlings properly, keeping the weeds out and the soil loose, the trees will grow to the height of sixteen to twenty inches the first season.

The following year you may transplant the grove. In our experience we have found it best to plant four feet apart each way. This gives all the trees an even start, and when the grove is ten years old cut out every other row. In this manner you will secure a valuable grove, in which each tree will be good.

DEEP TILLAGE PROFITABLE.

To the Editor of The Homestead:

I notice a letter from an Indiana subscriber in a recent issue of your paper. I have made exhaustive tests regarding the value of deep spring plowing, with entirely different results from those reported by your correspondent.

Of course, Mr. Walker refers to ordinary plowing where the subsoil is turned completely on top of the top soil, whereas I used a deep tilling machine, which pulverizes and mixes the top with the bottom soil.

I measured my land depth of plowing carefully, as also the weight of the corn, so I know just what deep tilling is worth to me.

While I was using the plow, I had plenty of company, they came for miles. And the criticisms! Oh, they said. he will ruin the ground—it is too slow, etc.

I will now tell you of my test plots. The land I used the machine on is black prairie soil with a little clay knoll here and there. It was in corn last year and I plowed under a heavy growth of stalks. The ground is thoroughly tiled with a four-foot ditch every seven rods. I took thirty-five acres on the south side of the field, and divided it in six plots, as follows:

Plot No. 1.—This consisted of two and one-half acres and was plowed with a sulky plow six inches deep. The yield by weight was 120 bushels of corn, or forty-eight bushels per acre.

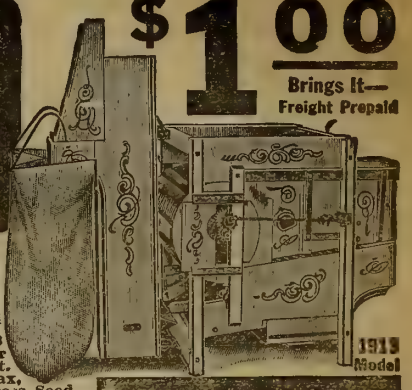
Plot No. 2.—Consisted of five acres plowed fourteen inches deep with a deep tilling machine. From this plot I got 366.4 bushels of corn, or 73.28 bushels per acre.

Plot No. 3.—Consisted of ten acres, which was deep tilled ten to twelve inches deep and yielded 760 bushels, or seventy-six bushels per acre.

Plot No. 4.—Ten acres were deep tilled

One Dollar Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded

$1.00 Brings It—Freight Prepaid



The CHATHAM Grain Grader and Cleaner

Manson Campbell

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

Your Dollar Returned

If you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment*. Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades corn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept 50

FREE BOOK ON **ALFALFA**

How you can grow it on your land
How to get "catch" first planting
How to select and prepare the soil
How to get more than average crops

These and hundreds of other questions that you want answered are clearly and distinctly covered in our new book just issued entitled "Alfalfa—Wonder Crop". This remarkable book contains a priceless fund of information about alfalfa growing, secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. In simple language, easy to understand, it tells just the things that you want to know before you start to raise this greatest of all $cash money$ crops. This book will convince you that you have some land on your farm where you can profitably grow alfalfa. This information was secured at a great cost of time, money and research. It tells how to grow alfalfa, how to get results from first planting, how to select the field and prepare the soil. It tells all about fertilization, plowing, liming, preparing the seed, when to plant and how to plant. Tells what to do during the growing period, how to get bigger than average crops, and how to cut and cure. The contents of this book are worth many dollars to the farmer interested in growing alfalfa. This book is ordinarily sold for 25 cents but we will gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

HENRY FIELD SEED CO.,
Box 25 Shenandoah, Iowa.

ten inches and yielded 800 b shels, or eighty bushels to the acre.

Plot No. 5.—Consisted of two and one-half acres plowed with sulky plow seven inches deep. The yield was 145 bushels, or fifty-eight bushels per acre.

Plot No. 6.—Five acres, which I tilled ten to twelve inches deep. This plot yielded 390 bushels, or seventy-eight bushels per acre.

To sum this up, I got 690 bushels more corn on the thirty acres that we deep tilled, than I would if I had used shallow plowing, or twenty-three bushels per acre more in favor of deep tilling.

I cultivated all these plots at the same time, with the same tool, using surface cultivation, but the deep tilled land was always in better shape, and has a better stand of corn.

It looks as if one should go from two to four inches deeper at each plowing and not try to go so deep all at once, but then I plowed in the spring; it would probably have been all right to go down twelve to sixteen inches if I had plowed in the fall, which I think is the better practice.

Indiana. J. D. Sturm.

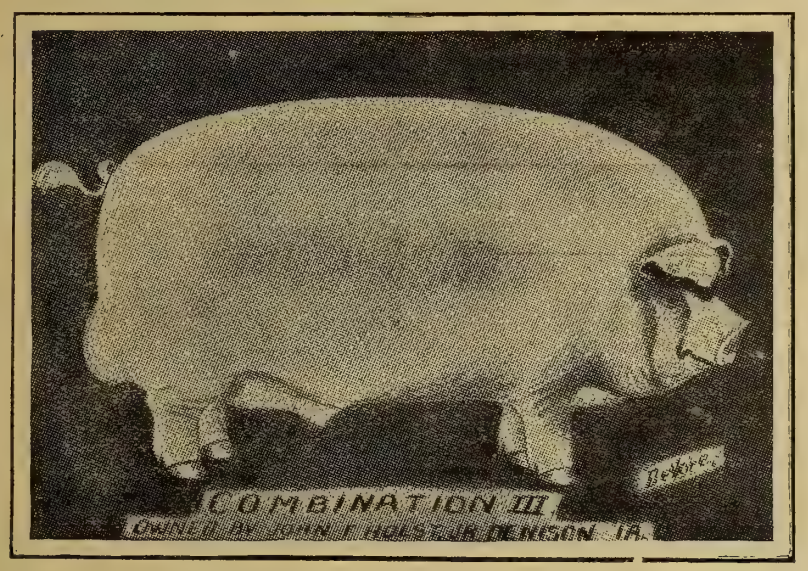
Iowa Aberdeen Angus Breeders' Meeting.

JUDGING by the enthusiasm displayed by the members of the Iowa Aberdeen Angus Breeders' Association at the annual meeting in Des Moines last week, the flag of the doddy hangs high in the Hawkeye state. The program as outlined by the o_cers was a most meritorious one and it was carried out to the very letter before a goodly size audience lasting well on into the second day. An inspiring address of welcome by Chief Justice S. M. Ladd, of the supreme court of Iowa, started the meeting off on the right foot while the response of the president, J. A. Arney, inspired every man present, including the speakers to carry out the program in such a spirit as to make the addresses of the greatest good to the greatest number.

In discussion "The Proper Care of the Cow for the Purpose of Producing Good Calves," Charles Escher, Jr., Botna, Iowa, emphasized fundamental principles that would be sound when carried out by beef raisers under a great variety of conditions. He attached a very great importance to grass and pointed out that economy in the growing of beef and the maintenance of sound constitutional characteristics in the breeding herd were insured when pastures were properly cared for and the herd allowed to graze during the greater portion of the year. According to Mr. Escher "grass is nature's feed for the cow as it furnishes during the summer season a complete ration in itself." Too much importance cannot be attached to the value of clover and alfalfa hay, corn stover, bright oat straw and ensilage, according to Mr. Escher. With these feeds little grain is needed in order to keep a breeding herd in healthy condition. Mr. Escher pointed out that the right kind of citizenship is found in all nations among that class who gave their time and attention to the raising and improving of live stock and he expressed the belief based on practical experience that after all live stock is the most profitable branch of agriculture that can be carried on in the corn belt.

Pursuing the same general line of thought, but beginning with the calf, E. T. Davis, Iowa City, emphasized the importance of taking good care of the calf whether it is raised for the feed lot or to be used as foundation stock for breeding purposes. "As the calf is raised the first ten months of its existence," said Mr. Davis, "so it will be the remainder of its life. If deprived of good feed and care in its young days it can never be developed into a first-class individual." It has been the experience of Mr. Davis that a calf even at a month old is ever ready to accept help from its master in order to bring about its own development. It should not only have the necessities, but also the luxuries of life during its tender years. It is not enough that it be allowed to follow its dam because in addition most profitable use can be made of grain. Comparing the two plans of raising the calf, namely, that of allowing it to run with its dam or on the other hand, turning it to its dam twice a day, Mr. Davis pinned his faith to the former plan. By this method labor is cut down and in these days labor is an important factor. Those who adopt the plan of letting the calf suck must exercise the greatest care at weaning time, otherwise much of the good flesh previously put on can be lost and such an animal can seldom be brought to a high finish at anything like the same margin of profit that would have resulted had the calf flesh been maintained throughout. Heavy feeding of grain and missing an occasional meal of milk at first and turning into new pastures, any of these plans, according to Mr. Davis, might be adopted so that the calf is eventually weaned without really taking it as a hardship. Above all things train the little fellow into the habit of living a quiet, inoffensive existence because this policy is consistent with the placing of the profit on the right side of the ledger at marketing time.

Few men are better able to discuss "The Care of the Calf from the Feed Lot to the Butcher" than H. J. Hess, Waterloo, and his address before the Angus breeders' meeting last week contained wholesome advice for every man who is interested in beef raising. Like Mr. Davis, Mr. Hess emphasized the great importance of jumping the "weaning time" gap so the calf does not fall off in flesh. The nice silky coat and the loose hide that is so characteristic of the thrifty suckling calf must be maintained. This can be done, according to Mr. Hess,



The above is one of the splendid Chester White herd boars at the head of the John F. Holst, Jr., herd at Denison, Iowa. See field note on another page.

A. A. BERRY SEED CO., Box 103 Clarinda, Iowa

by the use of plenty of shelled corn and oats equal parts with about one pound of oil meal per head daily. In addition good clover hay was advised. After the twelve-month period is reached Mr. Hess believes that corn and cob meal can be used in a way to make economical gains, because it prevents the impaction of grain in the stomach which often impairs digestion. Ensilage may be used advantageously in the feeding of calves, but Mr. Hess pointed out that those who are anxious to make large gains must realize the fact that a calf cannot handle large quantities of bulky food. In other words, they cannot be used for scavenger work about the farm if they are to be ripened for market at an early age. Expensive barns are not necessary in the raising of good calves, but they should have a well-ventilated shed at all times. Plenty of air and light are absolute'y essential. Every need of the calf must be satisfied and this especially applies to placing before them at all times an abundant supply of fresh water and in addition they should have access to salt at will. At the age of twelve months Mr. Hess believes that the steers and heifers should be separated, as under this arrangement they will both the better meet the needs for which they are kept. The heifers are usually ready for market first and ordinarily can be made to weigh 800 pounds at twelve months. The steers on the other hand, should, in the opinion of Mr. Hess, be carried longer. If they were dropped in the spring they are ready at twelve months to go onto pasture and they should be turned out early when the grass is short so that they cannot gorge themselves. The feeding of corn and cob meal should be continued right along because it has the effect of offsetting the succulent character of the grasses. After a time the oats may be omitted as well as the oil meal, but hay should always be left in the racks. There is no reason why under this treatment, well-bred steers cannot be made to gain three and one-half pounds a day during the months of May and June with nothing but corn, grass and in addition a little clover hay. Through the summer it is a good plan to let the steers have access to a darkened shed where they will not be pestered with flies. This shed, however, should be well ventilated. Finishing in the fall is done with a little green corn in conjunction with old corn and possibly in the end they may be changed wholly to new corn. In addition two pounds of cottonseed meal or oil meal daily per head was advised and under this kind of treatment the right kind of cattle will be ready for the Christmas market in prime condition for the butcher, realizing as they should very close to the top of the market.

In discussing "Care and Disposal of the Carcass from the Butcher to the Consumer," Prof. W. H. Pew, head of animal husbandry department, of the Iowa Agricultural College, called attention to the great shortage of cattle in this country and to him this meant that the day of cheap beef is past and yet it was ever and always will be in demand. Accepting the belief "the beef eaters rule the world," professor Pew concluded that the beef industry would always rest on a sound foundation. To meet the needs of the future cattle of handy weight must be used or, in other words, the supply must come in the future from the yearlings. It was pointed out that the better class of meat was consumed in the larger cities while the cheaper meat found its way to the towns and smaller cities. Because of the great variety existing in the demands that came from all classes of society there is a market for all classes of meat. According to Professor Pew, the packer while he will buy all classes of cattle prefers those that are well finished and the margin between the two is generally sufficient to justify the feeder in finishing the cattle if they are the right type to begin with. Half fattened or poorly finished cattle are not popular with the packer because they dress out a poor percentage of carcass. A short-fed steer, one that has been fed from sixty to ninety days will dress out from 55 to 58 per cent, while a well-finished bullock will dress from 65 to 68 per cent. Advantage can only come to the producer from this disparity in dressing percentage when the policy of bringing cattle to a high finish becomes a fixed habit with feeders.

In assigning the topics for this program, "Influence of Sire over Progeny" fell to the lot of A. C. Binnie, Alta. Mr. Binnie's long experience as a producer of superior doddies enabled him to present this topic in a captivating and forceful manner. The male is half the herd, if he is a good one, and is the whole herd if he is a poor one, might be taken as the keynote of Mr. Binnie's views. In addition to superior fleshing qualities and good blood lines, Mr. Binnie gave special attention to the importance of the right kind of temperament or disposition in a male. Where a fretful or nervous animal is used in the herd too many of his offspring show the same undesirable characteristics, in many cases these being greatly accentuated. Masculine qualities are to be sought after always as prepotency in the right direction can be expected only from this type of male.

Although not present in person O. V. Battles, Maquoketa, Iowa, forwarded an address giving his personal experience in the Canadian show circuit. According to Mr. Battles all cattle must be tested by a federal inspector before they can cross the line and they must be shipped in bond, which bond prevents the owner from disposing of cattle without first procuring an import certificate from the government at Ottawa. His experience in the Province of Manitoba convinced Mr. Battles that the Angus breed is exceedingly well adapted to the conditions of that country. This is well attested by the fact that the grand champion steer at the recent International Exposition was from the McGreagor herd bred and owned in the Province of Manitoba. A comparison of the treatment received by showmen in the United States and Canada led Mr. Battles to conclude that we have much to learn from our neighbors on the north. The showman in this country has to pay on a minimum of 26,000 pounds per car. In Canada the minimum weight is $20,000 pounds although the length of the car is the same in each case, namely, fifty feet. In Canada the freight charges are half the regular tariff and you are returned to your home free after the last show. With justifiable pride Mr. Battles announced the winning of a silver challenge cup against all breeds at the Winnipeg show—an item of news with which possibly every one present was familiar and yet, it was received with much rejoicing and enthusiasm. After sendind his herd over a distance of 10,000 miles covering the Canadian show circuit Mr. Battle stated that his experience was fairly profitable, saying nothing of the pleasurable character of entering so many contests in a new country.

At the close of the program C. J. Martin was called upon to sum up the salient points brought out at the two-day meeting. This was done in a manner creditable to Mr. Martin and most enjoyable to the members of the convention. A resolution endorsing A. Sykes as a member of the Interstate Commerce Commission as a successor to Mr. Clarke was unanimously carried. The election of officers resulted as follows: President, W. J. Desenburg, Norwalk; vice-president, T. A. Stevenson, Shannon City; second vice-president, Dr. McCullough, Humeston; secretary and treasurer, Silas Igo, Indianola.

Succulent Silage for Steers.

By G. H. Dacy.

THE price of hay, corn, and similar beef-producing feeds has advanced so rapidly during the last few years that many former beef feeders have abandoned the work of finishing steers for market. The rising popularity of corn silage as an efficient and inexpensive feed for the production of profitable beef is practically relieving the situation.

Plenty of silage in the beef ration usually induces cheaper and more gains while the succulent nature of this roughage keeps the cattle in good condition and causes them to shed their hair earlier and to look more attractive when they appear on the market than those animals that have been fed a wholly dry ration. In a recent feeding trial at the Pennsylvania Agricultural College twenty-four grade Short-horn and Hereford steers were divided into two lots of twelve animals each the steers in Lot 1 being fed approximately three-fourths of a full feed of ear corn for the first two months after which they were given all they could eat without waste for the remainder of the feeding period. Lot 2 was not fed any corn until the beginning of the third month when ear corn was added to the ration of silage and cottonseed meal in approximately the same amount as was fed to Lot 1 throughout the experiment. The ear corn was broken up to facilitate its consumption by the cattle while hogs followed the steers to pick over the wastes.

At the beginning of the test the average weight of the steers was 882 pounds and their average cost was $5.07 per hundred weight. The animals classified as fair to good feeding cattle. They showed evidences of an infusion of beef blood upon a scrub foundation. They did not possess the weight, quality, type, or condition of the best feeding cattle but were selected with a view to using steers of the type found on the average feeder's farm. They cost about $1. per hundred less than quotations of choice to fancy cattle upon the Chicago market at the time of purchase. Each steer was given all the corn silage he would consume as well as two pounds of cottonseed meal daily. The steers had access to an open end shed and a large open lot. The shed was well bedded all the time and fresh drinking water was constantly before the animals.

It is noteworthy that the steers ate less silage as the amount of grain was increased. In the case of Lot 2 upon the addition of 1,610 pounds of ear corn at the beginning of the third month the amount of silage that was consumed decreased 3,224.75 pounds. During the eighteen weeks that the beeves were fed, none of the animals were off feed. Weather conditions were exceptionally bad during the trial and at times badly frozen silage was fed. Even under these adverse conditions the cattle were constantly on the gain. It seemed essential that rations be made concentrated toward the termination of the finishing period in order that the cattle might continue to make rapid gains until the time they are ready for market. For this purpose shelled corn was found even superior to ear corn for use at the end of the fattening period.

The total amount of feed used by each animal in Lot I was 24.8 bushels of corn, 41.6 pounds of cottonseed meal, 2,550.4 pounds of corn silage. In the case of Lot 2 each animal consumed 13.5 bushels of corn, 41.6 pounds of cottonseed meal, and 4,365.8 pounds of corn silage. The gains in weight made by each lot were practically the same so that it may be assumed that 1,772.4 pounds of silage replaced 792.92 pounds of ear corn in feeding value. This indicates that a ton of silage was equivalent in feeding value to 894.6 pounds of ear corn, which at seventy cents a bushel would give the silage a replacement value of $8.94 when substituted for ear corn under conditions similar to those that prevailed in this test.

In this trial the amount of feed and dry matter required to make a pound of gain increased as the feeding period advanced even though the ration was made more concentrated and had an energy value. This is probably due to the difference in the character of the gain. In the early stages there is a filling up of the muscular tissue with water and proteids, but during the finishing period the gain is, for the most part fat, which has a higher energy value than any other substance in the body. The results indicate that the heavier silage ration was more efficient in producing gain, though the general appearance of the cattle indicated that Lot 1 was fatter at the close of the test, hence the difference in efficiency was probably due to a difference in the kind of material that was put on the carcass. The fat steers were classified as "handy weight" animals such as are in demand on the market throughout the year. A higher finish would have been more expensive and would have necessitated a longer feeding period.

At the end of the 126-day feeding period the steers in Lot 1 were sold for $7.20 while those in Lot 2 brought but $7. per hundred pounds. The net receipts from the former animals amounted to $875.58 while the net income from the latter group was $844.35. The average daily gain in each lot was about 1.86 pounds while the cost of the feed per hundred pounds of gain was $11.36 for Lot 1 and $9.02 for Lot 2. Each steer in Lot 1 received daily 13.81 pounds of ear corn, 2.09 pounds of cottonseed meal, and 22.54 pounds of silage while the animals in Lot 2 daily were fed 7.52 pounds of ear corn, 2.09 pounds of cottonseed meal, and 33.33 pounds of silage. The price received per bushel of corn fed after paying for the other feeds in the case of Lot 1 was $.761 while in Lot 2 it amounted to $1.046. The price received per ton of silage after paying for other feeds was $4.65 in the case of Lot 1 and $5.73 where Lot 2 was fed.

These results show that the feeding of corn silage develops profitable gains and that although there was a profit in feeding ear corn throughout the entire feeding period that a greater profit resulted when light plain feeders were carried for two months on a ration consisting entirely of corn silage followed with a grain ration towards the end of the feeding period. It is generally estimated that hogs following steers will gain two pounds for each bushel of ear corn fed to the cattle. If this credit was added to the net profit the income from Lot 1 would be increased $47.84 while that from Lot 2 would be larger by $26.80. Allowing $1 per ton for sawdust, $8 per ton for straw, and $1.50 per ton for manure there was an additional profit of $31.24 to that made from the direct feeding of steers and production of pork from droppings in Lot 1 during the feeding period. Silage can be advantageously used at all times as the sole roughage for fattening steers even during the coldest of winters. There is a marked saving of grain in the ration where plenty of silage is fed.

LEGISLATION ON ROADSIDE WEEDS.

Weeds and slough grass have no place on Iowa roads. Township trustees all over the state have been completely at sea as to the seeming impossibility of complying with the present statute relative to the mowing of the roads. Many of those recently elected are refusing to qualify because they do not care to subject themselves to the possibility of heavy fines for failure to carry out a law whose intent is excellent, but which has proven impracticable. Five hundred and fifty to six hundred acres of road to be properly mowed at such time or times as may be necessary each season creates too heavy a demand on the township treasury, unless taxes should be considerably increased.

Of course, the ideal way is to have the public pay for the care of the roads, but the ideal is very often not practical and the long experience of towns and cities has proved that the only feasible method is to require a lot owner to keep his own part of the sidewalks cleaned. We are discovering that the same principle holds true with regard to the roads. The large number of landowners who appreciate neat surroundings mow their own roads anyway, and as the law now stands, they also are required to contribute their part of the taxes used in mowing in front of the premises of their less public-spirited neighbors. This is unjust.

The bill as introduced by Representative Bingham corrects this injustice by making the landowner primarily responsible for the mowing. In case he does not do so within the time limit, however, it becomes the duty of the township trustees or other responsible road overseer to hire the necessary men and teams, at not to exceed $7 per day for the man, team and mowing machine or $3.00 per day for man and scythe, the money so paid out to be assessed to the abutting land and collected with other taxes. The permissable pay is fixed at these rates for the double purpose of making it an object, from the standpoint of economy, for the landowner to do it himself, and also to enable the trustees to offer whatever reasonable pay may be necessary to get the work done.

As a preliminary to requiring the mowing of the roads by the landowner, the bill provides that the trustee shall, wherever practicable, put all old barrow pits, careless graders' roadside gouges, and other irregularities in proper shape for mowing.

The ground hog saw his shadow all right, but if he was an old timer he must have wondered if he had not overslept a couple of months. Perhaps he sneaked back into his hole for another nap, but it don't matter much, six weeks of such weather as we have had don't cut much ice.

Hogs Like It Best

D. W. Jenkins, Monroe, Neb., writing about his 1912 crop of Hog Pasture Mixture, says: "When the pasture was at its best the hogs would stay in the pasture instead of coming for corn. The mixture proved to be just the thing in the right place. No farmer can make a mistake by sowing it.

GRISWOLD'S "Ready Quick"

Hog Pasture Mixture

produces in the hot summer when other pastures are short and feed is scarce. Can be planted in summer for fall feeding. Great for stock of all kinds. Grows quickly—produces big tonnage of fine green fodder *when it is needed most.* Write today for prices also free book of Garden and Field Seeds.

COILED SPRING FENCE CO. Box 20 Winchester, Ind.

Fills 60-ft. Silos With Ease!

The day of the skyscraper Silo is here. No Silo too high for the Smalley. Charles Spayde, of Humboldt, Iowa, has cut 1550 tons of ensilage since he bought a Powerful Smalley, now cutting all dry feed, such as chaffing and bedding.

Real business farmers like Mr. Spayde have no time to fool with the old slat-apron type of machine. They want this *force-feed* chain-table, grip-hook kind, made by Smalley only. Thus they save a tremendous amount of work and do a quicker, cleaner job. No coarse, uneven silage. All uniformly cut. Which means greater tonnage per silo.

POWERFUL SMALLEY FORCE-FEED SILAGE CUTTER

not only handles green silage, but is also a wonder at cutting dry feed. Handles alfalfa, for instance, to perfection. Letters in catalog prove it. Many farmers use their Powerful "Smalley" to cut corn in the fall and oats and peas in the spring for feeding when pastures dry up in July. Only one drive pulley on Blower outfits. No Idler to bother with. Ten per cent steel guaranteed in all foundry castings. No oiling by hand—hard oil cups on all important bearings.

You won't know what a real Silo Filler is till you've seen the Powerful "Smalley" or had the Smalley Catalog. Why not send a postal this minute for the latest Smalley Catalog and learn about the Silage Machine that four out of five silo owners now use? Write now and you'll get this fine, useful Book by return mail.

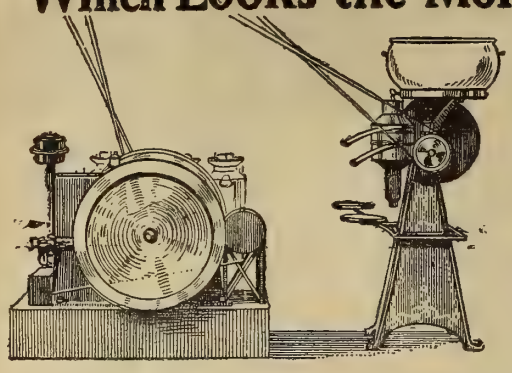
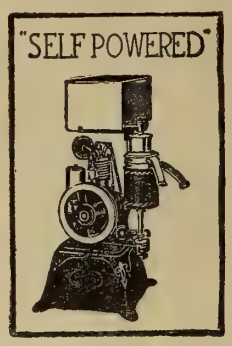
Which Looks the More Practical?





A Lot of Machinery—or—The "Automatic"

The "AUTOMATIC" is self-powered; engine and separator in one. The two are not loosely connected; they are solidly combined. The little engine is compactly built into the separator itself, and is so nicely adjusted that the bowl spins at high, even speed *without a trace of vibration.* This is a very different matter from the makeshift of hitching a hand power separator to any old gasoline engine. The two are ill suited. The explosive impulses of detached gasoline power are certain to jar and rack so delicate a piece of mechanism as a hand and gear driven separator. No manufacturer would recommend such a makeshift if he were not hard up against "AUTOMATIC" competition. He knows that hand power is doomed. A dairyman with eight or more cows to milk won't put up with the drudgery and expense of cranking a separator by hand—not a day longer than he has to.

"The 1913 Automatic" Cream Separator

requires no cranking. It saves time and labor. Skims faster than ten men can milk. When the milking is done, skimming is done, Hand power varies. The "AUTOMATIC" skims even—absolutely even; its speed is maintained without variation. The result is more butter fat and smoother cream. No hand cranked machine can possibly skim so close. ¶ The engine is highly efficient and very dependable. Starts with the pulling of a cord. Can't kick. Runs continuously for hours without the slightest attention. Is protected against freezing or choking or balking by an automatic fuel feed and magneto equipment.

If you are milking eight to ten cows or more you ought to know about the "AUTOMATIC" Cream Separator. See it in actual operation. Then you won't go on cranking a hand machine any longer. You cannot afford to. By writing us you can obtain full information by mail. We will tell you where you can see the machine in operation—of what dealer you can buy one. Give us the name of your dealer. Ask for Catalog No. 6.

Standard Separator Co., Box K-33 Milwaukee, Wis.

Every Year Adds to the Evidence That Quality In a Separator PAYS

YEAR after year, more and more farmers are realizing that the *highest quality* separator pays the *biggest dividends* for the *longest time.* The experience of men who bought only on a low price basis has served as a warning against buying "cheap" machines. Men who have purchased *Great Western Separators* are actual living proof that it is the best *economy* to pay a fair honest price for *quality.* Be fair to yourself. Get a separator that skims close for a *lifetime.* Get a separator that is *always* easy to turn. Get a separator that is easy to clean as long as it lasts. Get a

Great Western

if you want the most a separator can be—the best separator investment you can make. The Great Western is the only separator with a skimming system that follows nature's laws—the milk sinks, the cream rises. There is no chance of their mixing—so you get the utmost in quantity and quality of cream—even when skimming cold milk. It is self-draining and self-flushing; there are no long tubes, no minute slots, corners, crevices, or ragged edges to hold milk and collect dirt. The Great Western is ball-bearing throughout. The balls we use are absolutely uniform in size and test 50 to 100% harder than balls others use. The ball races in the Great Western are tempered so hard that you cannot cut them with a file. Low swinging tank and low gears with high crank, mean greatest convenience, least vibration, velvety cream and longest wear without repairs. We will arrange to give you

Any Kind of a Trial You Want on the size Great Western that best meets your needs, no matter what number of cows you own. Test the Great Western side by side with any other separator. Try them both on any kind of milk—warm, cold or stale. See how much better the Great Western is in every way. See how much finer the Great Western is made—note how much stronger the materials are—how much easier it runs, how easy it is to clean and *keep* clean and sweet. Then decide. We know that the Great Western beats them all. Comparison will prove it to you.

Art Book Free Drop us a card today and we will send you without any expense or obligation our beautiful art catalogue showing the Great Western in natural colors and also our million-dollar 5-year surety bond. Shows best methods of separating, gives results of extensive experiments and information on separating not found elsewhere. Proves Great Western superiority. Mail postal today.

THE PERSONAL TOUCH IN DAIRYING.

To the Editor of The Homestead:

Is it worth anything to have the owner of a farm dairy "on the job?"

Not far from me there is a farm that is coming to the front in a wonderful way, and I believe the young man who is at the head of things gave me the secret, or at least one secret of his success, when he said, "I always do the feeding myself." I knew, too, that every detail of the dairy work was done right under the watchful eye of the same young man. "Then," he added, "I know how it is done. I don't always when I let somebody else do it."

Now, that personal attention to what is being done is worth more than most of us realize. Nobody takes the same interest that we do ourselves in the feeding and other care of our stock. I say no one. Perhaps that should be modified. There are boys who have been so thoroughly imbued with the carefulness of their fathers that they can be trusted to walk in his steps and do everything upon honor. Now and then, too, we find hired men who will do it. The man who gets such a hand is fortunate. He had better make a life contract with him if he can.

But how does it count to give this personal touch? I'll tell you. The man who is working for his own best interests will make a study of his business. He will watch his cows to see if they are doing their best with the feed he gives them. He will not go out and pitch a lot of feed into the manger regardless of the capacity of the individual members of the herd; he will take into account the season of the year, the work his cows are doing and all the many little points that might escape the attention of the man who cares most about getting his work along and his pay for doing it.

Somehow the touch of the master is kinder as a rule than that of anybody else. And kindness counts. The man at the head feels the importance of little things and attends to them faithfully. He knows that the margin between success and failure is often a very slender one. He has the farm accounts in his keeping and sees just where things are going, whether well or ill.

Now, this all implies that the man highest up is himself a real man, whose whole heart is in his work, who is not simply working by the day but who looks well on into the future and knows that the best dairy work is that done for tomorrow.

E. L. Vincent.

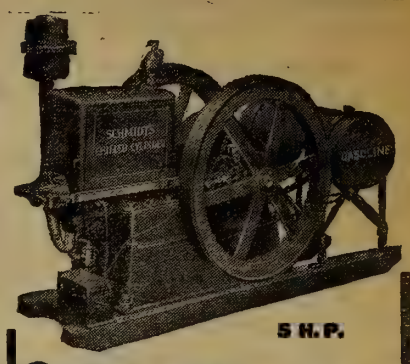
A GOOD DAIRY RATION.

To the Editor of The Homestead:

The following questions are asked by a subscriber, Mr. Gilbert Masters:

I have five grade Jersey cows, weight about 700 pounds, some milking and some to be fresh soon. Also six grade Short-horn cows weighing from 1,000 to 1,100 pounds. I have no feed except silage, corn fodder and corn, but can get bran at $23 per ton, gluten at $27, cottonseed meal at $45, corn at the elevator at forty cents per bushel, and alfalfa hay at $20 per ton. What should I feed to get the best results? The silo was filled with corn averaging forty bushels to the acre. Should I feed any corn besides what is in the silage? What is the milk-producing value of oats at thirty-five cents per bushel compared with bran at $1.30 per 100 pounds, adding three cents per bushel to the oats for grinding?

With the feeds mentioned this subscriber should be able to compound a splendid ration. The dry cows weighing 700 pounds which are expected to be fresh soon should receive about five or six pounds of corn (preferably corn and cob meal) daily and all the alfalfa hay they desire. This will keep the dry cows in a thrifty condition and will be sufficiently balanced for their purpose, except when cows are thin when they should receive in addition to the above ration four or five pounds of corn and cob meal daily. For cows giving milk I would suggest a daily allowance of silage from thirty to forty pounds being governed somewhat by the weight and feeding capacity. I would use a grain mixture in the proportion of four pounds bran, three



$7.50 and You Keep This Great Engine

We will ship you any one of Schmidt's Chilled Cylinder Gasoline Engines on your simple request. **Your choice of sizes**—water cooled or air cooled—horizontal or upright. You use the engine 10 entire days—then, if you don't want it, send it back at our expense. If you wish to keep this engine pay us **only $7.50 and you can pay the rest in the easiest monthly payments.** And you get the engine at the rock botton price—the same price that even the **wholesale dealer must pay.**

We Send This Engine FREE

We want you to see for yourself the powerful Chilled Cylinder—Ben Schmidt's new oiling device—his marvelous valveless carburetor and the other features that make his engines the simplest and most efficient engines in the world. They are the only engines with the marvelous, powerful **chilled cylinder.** The only engines for farm use with a **spark retarder.** The new type gasoline engines that have revolutionized the gasoline engine industry. The only engines good enough to send out on **actual free trial** without paying a single penny down.

Take a Long Time to Pay

If you like the engine after trying it out for 10 whole days you can keep it and take a long time to pay for it, on **easy monthly payments.**

Schmidt's Chilled Cylinder Gasoline Engines are absolutely guaranteed for five years in every part. The biggest bank in Iowa backs up our ironclad guarantee.

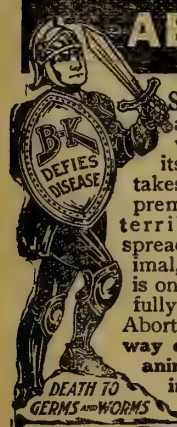
STOP Contagious ABORTION



Stop this dread disease and loss of calves—prevent its spread—once its foothold is secure it takes years to rid your premises and cattle of this terrible infection which spreads from animal to animal, herd to herd. There is only one way to successfully conquer Contagious Abortion—**only one sure way of preventing your animals from becoming infected—**

KILL THE GERMS.

10 times as Powerful a Germ Destroyer as Carbolic Acid, but Non-Poisonous.

B-K Bacili-Kil

Destroys Germs. Disinfects Stables, Animals, etc. Prevents Disease.

A wonderful new discovery—the safest, simplest, surest and cheapest germ killer known. Here is the actual proof:

"On receipt of the five gallons of Bacili-Kil and instructions for using the same, we treated a herd of forty cows which had suffered from Contagious Abortion for some time. We had lost seven calves and there were a number of cows due to freshen the following five months. Since using Bacili-Kil we have not had the slightest trouble; our calves have been born alive and normally. We are pleased to say that Bacili-Kil cleaned out our stable when other things failed."
A. S. H., New Lebanon Centre, N. Y.

Prove It at Our Risk

We'll send you enough B-K for two months' treatment of your herd—and if, after following our directions for that period, you are not satisfied with the results, we will refund your money without question—we leave it all *to your judgment*. We make this offer for a limited time that you may prove, *right in your own herd*, that B-K. is the cheapest, safest and surest means of conquering Contagious Abortion. We'll give you an opportunity to test this wonderful germ killer in preventing Contagious Abortion and Calf Cholera. You can't afford to overlook this opportunity to find out for yourself how B-K conquers contagious disease. Stop your losses. Protect your herd. Just fill out the coupon and mail it today—NOW—lest you forget.

pounds cottonseed meal and five pounds of corn and cob meal, thoroughly mixed and fed with the silage. Feed one pound of the mixture for every three pounds of milk given. To economize time these proportions may be enlarged to 100 pounds bran, seventy-five pounds cottonseed meal and 125 pounds corn and cob meal. They can all be dumped on a floor and scooped over till thoroughly mixed. For a hay ration give the cows what they will clean up of good alfalfa after their evening feed.

To cows in flow give the grain mixture as mentioned above in addition to the corn already in the silage.

The principal value of any feed for milk production lies in the amount of digestible protein it contains. When bran is worth $1.30 per hundred pounds or $26 per ton and when the oats and grinding are worth practically $25 per ton it would appear at first thought that oats were the cheaper feed. But we find that one ton of bran contains 252 pounds of digestible protein while one ton of oats contains but 184 pounds of digestible protein, so that on this basis it would take 2,738 pounds of oats to equal one ton of bran and this extra 738 pounds of oats at thirty-eight cents would be worth $8.74. O. O. Brewbaker.

MILK PAILS FOR FARM USE.

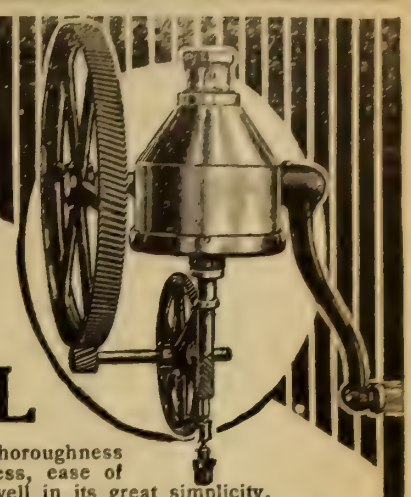
To the Editor of The Homestead:

It was the writer's lot one time some eight years ago to work on what was called by the owners a sanitary dairy. There he had experience with a type of milk pail that once was heralded as the perfect pail so far as securing clean milk might be concerned. It was the kind yet on the market and very frequently seen in use which has the top covered except for a diameter of about four inches. That opening was fitted with a gauze on which was placed a layer of absorbent cotton all milk entering the pail through the cotton. The theory upon which the pail was constructed was that all foreign matter, even the tiniest particles, would be held by the cotton and only pure milk pass into the pail. In practice, however, quite the reverse happened. All particles large or small were held by the cotton. Jet after jet of milk from the teat washed the particles until every bit that could be dissolved was washed through into the pail. More was dissolved in that way it seems certain than could have been the case had the opening not been covered with the cotton.

Yet so far as is possible the pail should exclude dirt and foreign matter. A thoughtful dairyman who is putting milk of a high grade on the market became dissatisfied with the ordinary pail with the large flaring top. He began experimenting with cups and with pails with different sizes of openings. He kept that up until he determined the smallest possible opening into which he could milk conveniently. Then he had all pails used in his dairy covered with tin sheeting with a central opening of the size that he had determined. At first his men demurred, but finally all milkers excepting one were using the covered pails regularly. That one man asked permission to use a pail with a large top to milk one certain restless cow. Later the owner found him to be milking several cows in the pail of the ordinary type. Since that time nothing but the covered pail with the opening a little more than two inches in diameter has been used in the herd. Such a small opening reduces to a minimum the amount of straw, dust, or other material that will get into the milk.

Another main consideration is that the pails be of the type that can be cleansed easily and thoroughly. Primarily the pail must be free from wrinkles and narrow grooves in which milk in various stages of decay and which is filled with disease germs remains after the ordinary efforts at cleansing have been applied. The dairyman mentioned in the paragraph above solders over smoothly all creases, joints and grooves. The galvanized material for lining is to be avoided. It cracks and rolls and makes lodging places for sour milk and bacteria. The cover on the pail must not be of such shape that it will interfere with proper cleansing. If it were it would defeat its primary purpose that of providing cleanliness for the milk. That the pail should

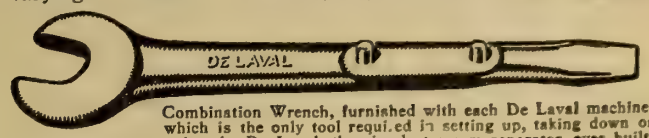
The Simplest CREAM SEPARATOR Ever Built — DE LAVAL



EXCELS ALL OTHERS not only in thoroughness of separation, sanitary cleanliness, ease of running and durability, but as well in its great simplicity.

THERE IS NOTHING ABOUT THE OPERATION, CLEANING, adjustment or repair of a modern De Laval Cream Separator which requires expert knowledge or special tools.

NOR ARE THERE ANY PARTS WHICH REQUIRE FREQUENT adjustment in order to maintain good running or to conform to varying conditions in the every-day use of a cream separator.



Combination Wrench, furnished with each De Laval machine, which is the only tool required in setting up, taking down or using the De Laval, the simplest cream separator ever built.

THERE IS NOTHING ABOUT THE MACHINE THAT CANNOT be taken apart, removed or replaced by any one who can use a wrench or screw driver. In fact, the only tool which is needed in the use or the operation of a De Laval Cream Separator is the combination wrench and screw driver illustrated above, which is furnished free with every machine. Visit the local De Laval agent and see for yourself its simplicity of construction.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

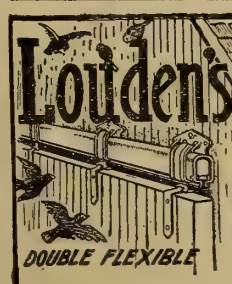
Louden's Bird Proof Barn Door Hanger

Never Clogs—Never Balks



PERFECT AND PERMANENT.
And the only enclosed track that automatically adjusts itself to lie close to the building.

LIGHT RUNNING, roller bearing, tandem trolley hangers, operate inside of an enclosed track. Always runs easily, never binds. Can't get off the track. Can't be clogged by birds, ice or snow. Can't be broken by stock crowding through half open doors. Carries the heaviest doors. Lasts as long as your building—always on the job. *Costs no more than the ordinary makes.*

Buy them at your dealer's or write us for Free descriptive matter.

We make the famous LOUDEN Hay Tools, Sanitary Steel Cow Stalls and Stanchions, Litter and Feed Carriers—everything for the barn. Free catalog describes them all.

FREE BARN PLANS SERVICE. If you are going to build or remodel your barn, *write for our free barn plan service.* LOUDEN MACHINERY CO., 709 West Broadway, FAIRFIELD, IOWA.

be covered so far as possible is a necessity with all who appreciate clean milk. The type of pail with about three-fourths of the opening covered leaving ample space for the milk to enter and for the insertion of a brush for cleansing or for steam if there is such available is no doubt the preferable type for ordinary farm use. Pails constructed on that plan can be purchased on the market for a little more than the common type costs. In assisting to secure cleaner milk they will many times pay for the additional cost. Subscriber.

BRAINS, RECORD AND DAIRY PROFITS.

To the Editor of The Homestead:

Half the cows in the average herd kept for milk, cream and butter profits are either eating their heads off or else giving such small returns for the feed and labor and room expended upon them that it is unprofitable to keep them. This is a broad statement. I know it will be questioned by a good many farmers who are getting fair returns from their cows, but if they would let me take the Babcock test and march into their herds I would soon prove every word of my opening statement.

The state of Minnesota for years pointed to as an example of dairy thrift, has lately been under the eye of official herd testers. Hundreds of herds that were supposed to be giving profits have been found to be millstones about the financial necks of their owners. It has been repeatedly said that the average cow yielded but 150 pounds of butter per year. If the manure from these poor-paying cows had not been returned to the land from which came their feed, it would have been more money in the farmers' pockets to have sold the grain and hay they were consuming and beefed the critters.

There never was a time in the history of American farming when feeds brought higher continued prices than they do right now. There never was a time when good dairy products were in greater demand and at such continued high prices. And also there are more poor cows gracing the pastures and stanchions in America than ever before.

My last statement of fact is being borne out by the cow-testing associations which are springing up all over the country. They are uncovering the poor cows in the herds of the dairyman who is in the business for the fun of having a big farm and showy display, as well as in the working herds of the diversified farmer who expects a monthly cream check to provide for current expenses of the farm and add to the back account. It is in this process of weeding out your herd that I want to help you. I am operating a dairy farm on high-priced land here near Waterloo. In starting my dairy department I based a cow's worth on the amount of butter fat and milk she produced. Many a pitfall has the test of pounds of milk and its butter fat saved me from.

H. L. Russell, of the Wisconsin Experiment Station, declares that a cow must yield 150 to 175 pounds of butter per year to pay for her keep. I think he included labor in this cost figure. Professor Haecker, of the Nebraska Experiment Station, says that 700,000 milk cows in that state return an average of 125 pounds of butter per year. If these figures are correct these 700,000 cows are losing from $75 to $100 each per year for their owners. Good cows would convert more of that feed into money. With right care they would return nearly $100 each every twelve months.

On the average corn-belt farm it costs 130 pounds of butter per year to pay for a cow's keep. Some places it might cost a bit less owing to particularly favorable conditions for growing her feed. In other places it might cost a little more. But my statement will hold good throughout the corn belt. At the present price of butter fat, about thirty cents per pound, 100 pounds of butter runs from $30 to $40. Consequently this amount is equivalent to the cost of a cow's feed for a year's time. Taking 150 pounds as the average cow's yield, and this has been time and again proven not to be too low, a cow producing that much butter fat is returning her owner but fifty pounds of butter fat profit during her milking period. Fifty pounds of butter at thirty cents means a net yearly profit of $15.

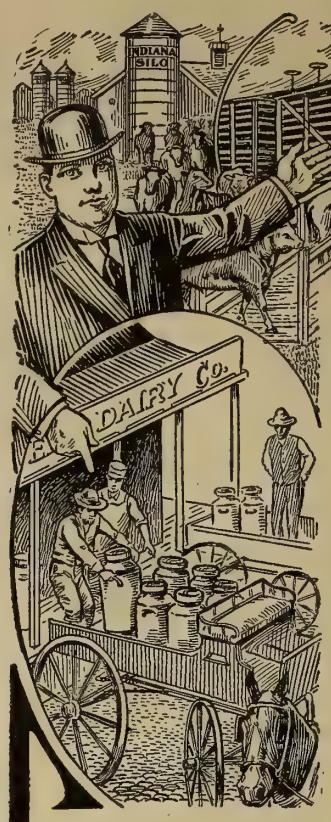
Now, mind you, I am not saying that all cows are doing as poorly as this. I am not even saying that your herd contains one cow doing as poorly. I am merely opening up the possibilities that lie before you in the way of knowing absolutely, positively, just what your herd is doing. A complete testing outfit of the Babcock type will cost you but $3 or $4 and if this small outlay does not prove the biggest money-making investment you ever made let me know and I'll never make another suggestion to increase your dairy profits.

The farmer who is milking cows without weighing their milk wants to begin right there. It is as important to know what amount of milk as what the butter fat or cream test is from each animal. Cow record sheets can be easily made. Take a sheet of paper and rule it horizontally. Make a line for the name of every cow in the herd and then add a few lines for cows that will soon freshen or heifers that are likely to be added to the herd. Put these names on the left-hand side of the ruled sheet. To the right of their names draw a straight line up and down the sheet and then continue these lines until you have a small space in which to put down the figures of the weight of each cow's milk for two milkings per day every day in the month. Tack this sheet on a smooth board, fasten it up in the barn and hang a pair of good, small scales close by so that each cow's milk can be weighed every milking. On a string tie a pencil at the bottom of the record sheet. Now you are beginning to get down to knowing something of what your cows are doing.

With your Babcock tester each cow's milk should be tested twice per month to see what its butter fat percentage is. Most every state has its official standard of butter fat in the milk that is offered to the trade. In Nebraska and certain other states, the standard is 3.2 per cent of butter fat and each 100 pounds of milk contains that percentage of it if sold to the trade. It is often through ignorance of the amount of butter fat in their milk that dairymen are hailed into court and fined. If you do not want to test your own cow's milk have a series of test bottles, one for each cow and put a test sample of her milk into it twice per month, when you can carry it to the local creameryman. If you are separating your cream at home and sending the cream to the creamery once or twice a week it might be more handy to have the creameryman do your testing for you. I advise doing the testing right at home on the farm, in the kitchen, for then you know just how it is being done and are taking the right kind of interest in the work.

Every good cow on the farm should yearly make the dairyman $100 clear profit. This amount may include her butter fat, the skim milk and her calf. I know you will think I have set the mark pretty high, but did you ever hit the mark by aiming low? A corn-belt farmer friend of mine began dairying on land that cost him $60 per acre. Before he got his herd into good working order the land had increased to $75. He gathered about him twenty cows of native stock when some one told him about the Babcock test. He bought a small outfit and began testing his cows and keeping a record of their average butter fat. Twice each month the herd went under the test, a sample of the morning and evening milking being used each time. After the second month's test, eight of the cows were sold for the simple reason that they would have to give three times the amount of milk they were producing in order to make a profit over their feed and care, because their butter fat percentage was so low.

At the end of the fourth month two more were disposed of. Then a system of breeding up began. He bought a couple of pure-bred cows that made more actual butter fat than any four of the natives he started with. A pure-bred bull crossed onto the native cows that he kept, gave him a few nice heifers which at the end of his fourth year's work began to yield and boost the output of the farm. They show a decided improvement over their dams both in milk flow and quality. And so he progressed on the actual knowledge of every cow's record. He knew what they were doing for him at all times. He knew what feeds affected their milk flow and fed accordingly. Today his farm supports nothing but



We will double the profits of your dairy and feeding-pens

During the past ten years we have showed 25,000 farmers how to make big money out of their milch cows and how to double their profits by proper feeding of cattle for the butcher's block. We have increased their net earnings, cut down the cost of feeding and made their farms as profitable in winter as in summer. The

INDIANA SILO

holds the record for fattening prize winning cattle and developing top-notch milkers. Look into the histories of the cows and steers that have walked off with the prizes at the Dairy and Live Stock Shows for several years back;—you will find that most of them were fed from Indiana Silos.

Not long ago a Western Rancher wired our Kansas City Branch for twenty Indiana Silos. There was no competition for that order because the purchaser knew the Indiana Silo materials and construction. He had seen Indiana Silos before they were erected and had studied the scientific method by which all two-piece staves are united by air-tight, all-wood, self-draining mortised joints. He had noted the perfect milling of tongues and grooves. He had been present at the erection of Indiana Silos and had learned first hand how easily they go up. And he had seen Indiana Silos *in use* and had observed the wonderful results they invariably produced. Not a point had escaped his western eagle eye. *He knew.* Hence his order.

Investigate thoroughly, as this Westerner did, and your order will come to us, too. Will ship it when you want it.

WRITE today for our catalogue and a free copy of the book "Silo Profits", which is the story of the Indiana Silo as written by scores of owners of Indiana Silos. And ask us for the name of our representative in your locality.

"You *buy* an Indiana Silo—but it *pays* for itself."

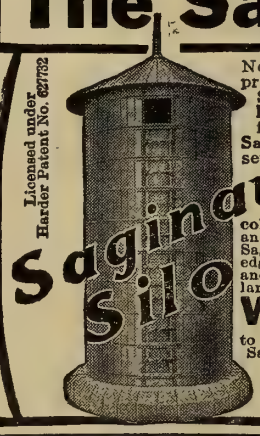
And A-G-A-I-N The Saginaw WINS!



Nobody who has been watching the Silo business was at all surprised when the news came out a few days ago that the Saginaw Silo won another big victory in adopting the **Patented Angle Steel Rib.** Wasn't it the Saginaw that made the **All-Steel Door Frame** famous? And was ever anything invented to compare with the **Saginaw Base Anchor** or the **Saginaw Inner Anchor?** No, sir! For seven years every single **practical** Silo improvement has first appeared on the **Saginaw.**

This year's Saginaw is simply a **wonder! Strong as a City Skyscraper.** Never a chance of the most terrific storm even budging it. It cannot **blow down, nor twist, nor warp, nor collapse, nor cave in, nor tilt.** Even when empty, it stands as immovable and strong as the great Rock of Gibraltar. And so **scientifically** is the Saginaw made that your Silage is always **bright** and **clean** clear to the edges, **next to the wall.** Five mammoth factories are now kept busy day and night making Saginaw Silos. The Saginaw is four times more popular than any other. Last season, in one day 587 Saginaws were sold.

WRITE! Rush a postal to us at once and you will soon have before your eyes the fascinating story of the World's Greatest Silo. No Dairyman or Stockman can afford to miss such a treat. Mail just a postal now, saying you want the new Saginaw Silo Book No. 34, and it will be sent you by return mail.

DES MOINES SILO

Built for Permanence
First Cost Is the Last Cost.

Creosote dipping adds, according to Government reports, 17 to 20 years of life to the Silo. That is the reason the Des Moines Silo is dipped in creosote. A special dipping plant was built at great cost to add this feature to the already superior construction of the Des Moines Silo.

The creosote penetrates into the wood covering every check and going deep—making the wood absolutely impervious to moisture, thus preventing rot and in a large measure overcoming the shrinkage and swelling due to changing atmospheric condition. It is never necessary to paint the Des Moines.

Des Moines Silos are equipped with spring lugs that overcome the last possibility of the hoops becoming loose. The Des Moines Triple Anchor System and three inside hoops are the best in the world. Positive insurance against damage by wind. Other buildings may go but the Des Moines Silo will stand.

The story of the Des Moines Silo is told in a book that will be sent free.

THE THOMAS & ARMSTRONG CO., 22 Main St., London, O.

pure-bred animals. His herd averages over sixty cows and heifers in milk the year round and the herd average is now close to 400 pounds of butter fat per cow per year. He aimed high and hit the mark. He is shipping pure-bred dairy cattle to China, Japan, South America, Canada and Mexico and is today one of the leading dairymen of his state. And all this because he learned the record of each cow's actual performance in quality and quantity and selected and bred with a view of increasing the money-making ability of his herd.

Dairying builds up the land as no other branch of farming can do it. To turn the grain and forage crops of the farm into butter fat, takes less soil fertility off the land than any other farm product you can haul to market. In selling beef, grain, hay, you are removing from the farm more profit-making soil elements than you are putting back unless you buy fertilizers to renew the land. It is because of this fact that the American farmers have been said by the scientific soil experts of Europe to be a nation of soil robbers.

Dairying returns to the land the rich manures that supply humus or rotted vegetation so essential to perfect soils and heavy crops. It gives you through the wastes of the dairy, skim milk and buttermilk, the best feed for pork making, a highly profitable adjunct to the business. It saves the heavy labor of hauling to market grains and hay. Its returns are certain for the increase in the production of high-class dairy products has not kept step with the increased demand and increasing prices.

A scrub cow that is yielding but 5,000 pounds of milk of 2½ per cent butter fat test will consume as much feed as one yielding 10,000 pounds of milk of 4 per cent fat test. This has been proven so many times that there is no need of me going into it again. The difference in the scrub cow and the good cow is that the scrub consumes the feed and her digestive and milk-making organs cannot turn it into money like the well-bred cow. One has been bred for the purpose of making the most milk and fat from her feed for 100 generations while the other is a blot on the farm and a robber of your purse. Wm. Galloway.

THE COWS THAT ARE TO CALVE.

To the Editor of The Homestead:

The cows that are to be mothers before long should have special care. In the first place they should be separated from the rest of the herd. A cow that is heavy with calf cannot get around very fast, and other stock is apt to bother her a great deal. The other day I saw a mule running such a cow across the field, biting at her. It was a great effort for the cow to keep out of his way, but she was doing her best. The cow that is chased about by other animals is liable to be injured, which may result in loss of cow and calf.

Then be sure that no hogs are allowed in the cow lot. Often they have done a calving cow irreparable injury. I have seen cow and calf both so badly injured by the hogs that they had to be killed. A little precaution here will save the farmer a good deal of money.

Then I believe it is a good plan to put the cows where they cannot run to ponds or along the banks of streams with water in them. In my short lifetime I have known many farmers who lost calves that were born on the banks of ponds and streams. In its struggles the calf simply tumbled into the water and was drowned.

The cow should also have a good grain ration before calving. This gives her strength and vigor. Cows that have wintered on nothing but roughness seldom bring vigorous calves and sometimes die at calving time. Feed plenty of corn and give the cow a comfortable stall or shed at night. If you leave her out in the blizzard, you may find a frozen calf in the morning. Subscriber.

MILK AND ITS PRODUCTS.

The above is the title of a most valuable book just from the press by Prof. Henry H. Wing, of Cornell University. It is a revision of a previous volume by the same author and it covers almost every conceivable dairy subject and the matter is presented in every-day business language. The reader may obtain some conception of the character of this book from an examination of the chapter headings which are: Secretion of Milk; Composition of Milk; The Production of Milk—Dairy Cattle; The Testing of Milk; The Ferments and Fermentations of Milk and Their Control; Determination of Bacteria in Milk; Market Milk; Certificated Milk; Separation of Cream; The Ripening of Cream; Churning; Finishing and Marketing Butter; Milk for Cheese Making; Cheddar Cheese Making; Other Varieties of Cheese; Ice Cream; Other By-products of the Dairy; Butter and Cheese Factories; Statistics and Economics of the Dairy Industry; Appendix. We have no hesitation in indorsing this book and in recommending it to those of our readers who have anything to do with dairy cows or with any branch of the dairy industry. We are able to supply it to our readers at the regular publishers's price, namely, $1.50.

THE PULLING POWER OF HORSES

A totally new element has been brought into the good roads question by Dean William G. Raymond, head of the college of engineering of the state university of Iowa, in an address before the Johnson county good roads convention.

Although Dean Raymond is working for permanent roads, he wants the state to go in with its eyes open and consider all the problems. This one relates to grades.

With dirt roads, said Dean Raymond, the pulling power of a team of horses is limited more by the condition of the surface of the road than by the steepness of the grades. But with concrete, brick or macadam roads the pulling power of a horse on the level is immensely increased, and it is the grades which determine the size of a load that can be pulled. Consequently, in order to get the benefit of permanent roads, it will be necessary to cut down the grades.

The practical effect is about as follows, says the dean:

A team of horses can exert steadily on a dirt road a pull of 250 pounds, which is enough to pull a load of two and one-half tons on the level, and the team can pull the same load over short hills of a rise of from five to eight feet in the hundred by extra exertion.

But on a concrete road the team of horses can pull a load three or four times as great on the level. When it comes to a hill, however, the team cannot pull this added load over the same grade that it could travel over with the lighter load on dirt roads.

Dean Raymond figures that the maximum load for level concrete roads can only be pulled over a 2 per cent grade, that is, over a hill that rises two feet in the hundred.

In his address he went into the cost of permanent roads, urging short time bonds, and said he considered permanent roads more of an investment than an expense. The $5,000 or $10,000 a mile invested in a permanent road is not loss, he said. The money is spent, but the community has the road, and before the road is worn out it has its value in use and in increased value of property.

Echoes From a Kansas Farm

BY HENRY HATCH

Each week finds the supply of well water growing less. As far as effect on wells is concerned, the drouth has been the longest known here in years. It has been a long time since there has been moisture to reach more than three feet under ground.

The women folks are beginning to "set" their incubators. This in itself is an indication of warmer weather coming, but it may not be exactly springlike when the first hatched come into the world. One has to be fixed for it to raise chickens that arrive on the scene before the first of March.

More plowing has been done this January than in any other January of which we have any recollection. Except when frozen, the soil has been in fine condition for plowing, and fearing wet weather will follow this long absence of rain, more farmers than usual are getting a portion of their spring plowing done a couple of months and more in advance.

Hay is becoming cheaper instead of higher in price as the winter advances. The best prairie hay, baled and delivered on track, can scarcely be sold for $7 per ton, now. Last winter, only a trifle later than this, it was selling readily for three times the present price.

We have heard it stated that warm water set outside in freezing weather will freeze quicker than will water that is cold and set out at the same time. We never have tried this to know whether it is a fact or not, but it seems doubtful to us that it can be so, yet we are not going to say that it is not a fact. We do know that water in a gasoline engine freezes rapidly on a winter day, after the engine has been stopped for a time.

Practically every silo owner not dairying has a bunch of cattle on feed. This seems to be general all over the Southwest, and it would be a surprise us if the shipment of fat, partly fat and half-fat cattle in the next few weeks would exceed ordinary expectations. Many here in Kansas do some figuring on tax levying time, which is the first day of March, and many cattle will be unloaded before the first of March, so affairs may be straightened up and put in shape for the assessor's visit. More stock is put on the market before March 1st, just because of this, than many folks make any account of.

Pure-bred Registered
HOLSTEIN CATTLE

These are discouraging times for dairymen dependent upon average cows. Proceeds barely cover the cost of production. A cow that just pays her way is unprofitable.

Yet there is plenty of money being made in dairying today. Good cows turn deficits into profits and a man with pure-bred Holsteins is not complaining about hard times.

Holsteins are the most economical producers of milk and butter. They are large, healthy and easy to care for.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

CARE AND FEEDING OF YOUNG CHICKS.

To the Editor of The Homestead:

First, we will suppose that chicks have been hatched from eggs laid by strong, vigorous birds and if hatched by hens, are free from lice, thus being given a fair chance to start with. As the writer prefers the natural rather than the artificial mother for chicks will treat the subject from this standpoint.

When chicks are thoroughly dry and strong move from nest or incubator as the case may be, and put with a quiet motherly hen (that has been well greased on top of head, under wings and around vent with a little melted unsalted lard), in a clean, dry coop which, if an old one, has been thoroughly disinfected with some good disinfectant of which there are many kinds on the market. This should be done several days before using the coop. Also be sure coop is rain proof, rat proof and weasel proof. Put some clean chaff on floor of coop (clover chaff preferred) and also several handfuls of clean, dry sand which the chicks will pick at thus preparing to digest their first food.

Give mother biddy from fifteen to twenty chicks according to her size and the kind of weather. If hen is small and weather chilly fifteen would be too many. After giving a small dish of water and some whole shelled corn for mother hen and all are safely hovered, leave them be—except for an occasional peep to see that none have crawled away from the hen—for twenty-four hours more when they may have their first feed. This should be composed of bread crumbs well dried, mixed with a little hard-boiled egg and a little prepared chick feed may be added. Feed sparingly of this five times a day until at least a week old when the egg and bread crumbs may be left out if desired and cracked wheat, chick feed, cut-up onion tops or onions, cabbage, lettuce and dandelions may be fed. After a week old or two if weather is favorable they may be fed less often, changing first to four times and then to three times daily. When from six to two months old twice daily will be sufficient if they can forage and they may be fed whole wheat and crack corn for grain ration. Always keep chicks dry and free from lice as nearly as possible. Feed sparingly when young, give plenty of clean, fresh water and sharp sand and grit. These are the chief requisites. Subscriber.

POINTERS ON CHICKEN RAISING.

To the Editor of The Homestead:

I raise White Wyandottes and White Hollands and have never had any trouble with my eggs not hatching. About 150 hens and pullets and fifteen young cockerels are kept on free range while on another part of the farm a pen of the best birds are kept in a large chicken tight fence where they have plenty of outdoor exercise every day that is not too stormy. I hatch from both flocks and get about ninety-five chicks from 120 eggs. I gather the eggs three times a day and never put any in the incubator that are over ten days old.

The birds are kept in good condition so they are strong and healthy being fed wheat bran, small oyster shells and charcoal besides corn, oats and wheat. I believe in dry feed and give sweet skim milk and water for drink.

About three or four days before the incubator hatches I take four or five eggs from it and put them under some sitting hens that I have ready to take the little chicks and when all are hatched give each hen fifteen little chicks in a good large warm box. The first few days they are fed bread crumbs with sweet skim milk to drink. Also keep bran, sand and charcoal where they can get it when they choose. Everything is kept as clean as possible.

Mrs. C. F. McLachlin.
Audubon county, Iowa.

WHY RAISE THOROUGHBRED POULTRY?

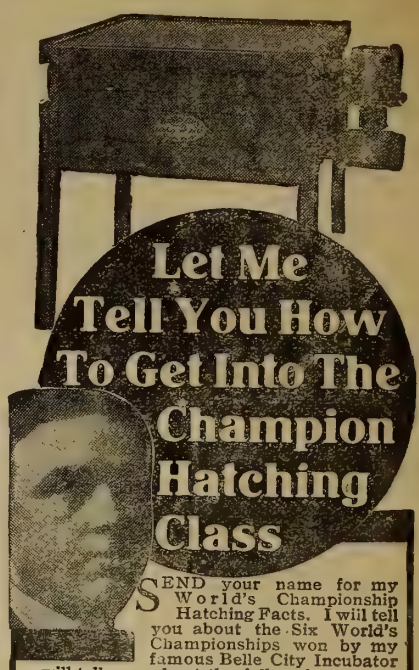
To the Editor of The Homestead:

Does it pay to raise thoroughbred poultry? This question has been settled by successful poultry raisers to their satisfaction, but is continually being asked by farmers who heretofore have been contented to see a mixed breed of chickens on their farm. Slowly, but surely the old prejudice against so-called "show chickens" is disappearing, and the farmer is beginning to realize that it pays to raise the very best of everything on the farm, poultry included.

Sometimes you see a few fairly good fowls raised from breeding mongrels, but there is no certainty in the breeding qualities of a mixed flock of fowls; and this fact militates against their use in these days of greater efficiency when economic production is essential for greater profits. Some farmers claim that their flock of mixed breeds is hardier and lays more eggs than a flock of thoroughbreds of the same size. While it is true that the crossing of good bloods tends to increase natural vigor, it is not true that the indiscriminate crossing and recrossing of mongrel bloods increases egg production or the table qualities of its offspring. The results are quite contrary to those claimed; and such assertions generally are made as an excuse for their author's lack of management, and his neglect of the correct principles of breeding.

We occasionally read about some breeder selling an exceptionally good fowl for a price that ranges up into hundreds of dollars. Now why do these fowls command such high prices? Because they were thoroughbreds as were their ancestors before them, because the buyers believed they would be worth that much to them in their breeding yards, and so they were willing to pay the prices asked for them. Of course, where $100 or more is paid for a single fowl the price is exceptional, but what I wish to impress upon those who are still wasting their time raising mixed breeds is that these prices are made possible by the fact that the seller raised standard-bred thoroughbreds. While these are exceptional prices it is common practice among fanciers to pay $25 or $50 for fowls for breeding purposes, and $3, $5 and $10 for breeders are prices too common to occasion comment.

Now it costs no more to feed these blooded fowls than it does to feed a mixed lot of mongrels, and they will lay more eggs and produce more flesh and in less time than a common mixed lot. It is true that it costs more money to get a start with thoroughbreds, but do not let $2 or $3 per head for females or $5 or $10 for male fowls scare you out of getting a start with thoroughbreds. If you get good standard-bred stock to start with do not be frightened by the prices asked by a reliable breeder, for the chances are that they are worth every cent asked for them, for the breeder has used his skill and knowledge gained by years of experience at no telling what cost in their production. They will prove a good investment if properly cared for and the returns will justify the expenditure. If you think that you cannot afford to pay the price for stock, then buy a sitting or two of eggs from the best stock you can, and get a start in that way, but by all means get a start; and in another year or so you will be shaking hands with



Let Me Tell You How To Get Into The Champion Hatching Class

SEND your name for my World's Championship Hatching Facts. I will tell you about the Six World's Championships won by my famous Belle City Incubator—will tell you about the folks who won the prizes, how they did it and how you can get championship hatches right from the start. My

BERRY'S POULTRY FARM, Box 49, Clarinda, Iowa

yourself because of your good judgment.

The demand is for "better poultry and more of it," and who is in a better position to supply this demand than the large army of farmers scattered over this country. Make up your mind that the best is none too good for you, and do not be satisfied until you have the best, for mongrels are not the best, not even "good enough," and are utilizing space that should be occupied by thoroughbreds. Conduct the poultry end of the farm on the same business principles that you do your blooded cattle and hogs and see if it does not pay you a greater per cent on the amount invested than any other crop on the place.

F. Mark.

THE HENHOUSE FOR HENS.

To the Editor of The Homestead:

Is the henhouse for man or for fowls? Is the first aim in building a house to satisfy the taste of the owner or to provide for the nature of the laying hen? In reply to these questions I wish to set forth a few facts. The first consideration in building a house for laying hens is to meet the demands of the laws which govern the physical nature of the occupants. Among these demands may be mentioned sanitation, exercise, warmth, privacy, convenience. The second consideration is to provide for the owner's economy (in time, labor and material) also convenience (in feeding, cleaning and gathering eggs).

There are four general physical habits of the laying hen. She scratches, feeds, lays and roosts. Therefore she should have rooms for scratching, feeding, laying and roosting. There are four general characteristics of the laying hen to be considered. She is affected by the weather, she is easily excited, she chooses privacy and selects the highest points in the house to roost. Therefore she should have a house to meet the changing conditions of the weather (cold, heat, darkness and light). Also the house should furnish a retreat, privacy and the highest point for roosting. I can show best how all these considerations are met by mentioning a house which I built in my back yard at the parsonage in David City, Neb. The house has met every requirement, and has tested 100 per cent efficiency in egg production.

To provide for a surplus of twenty pullets of a flock of thirty-eight, April 30th hatch, I built a house six by eight feet, ground floor, at an expense of $12 for material. The first floor was put one foot below the surface of the ground. Then above are the feeding, laying and roosting floors respectively. Windows are set at half angle to catch the direct light and heat rays of the sun for the scratching and feeding floors. The cloth ventilation is placed at one end of the fourth or roosting floor. Litter, feed and water are placed from the south side. The eggs are gathered and the roosts are cleaned through drop doors at the north.

The twenty pullets in the newly planned house laid 363 eggs during December, while the eighteen pullets of the same hatch in an old-style house of twice the dimension, equally warmed, lighted, ventilated, laid one-third less eggs per pullet on the same rations during the same month. How is the difference accounted for? Simply the newly planned house meets all the conditions governing the nature of the laying hen. It also provides economy and convenience for the owner.

This house can be built by any one, portable, any length, and for any number of fowls. It is especially adapted for the "fresh air" method, and for an open summer house. In the brooding season it is convertible into three houses: namely, the two lower floors will provide for two flocks of chicks, while the upper two floors will remain the quarters for the laying hen. I would be glad to hear from those who have used the four-story house, and hear the testimony of others.

Nebraska. Robert A. Harrison.

won the much coveted specials for shape and color."

—Elsewhere in this department of The Homestead will be found the advertisement of Mrs. H. Wood, Moville, Iowa, offering White Plymouth Rock eggs for sale.

—R. H. Patterson, Versailles, Ill., is quoting very low prices on fawn, white and English standard Runner duck eggs in his advertisement that appears elsewhere in this department.

—"I have the finest lot of Single Comb Buff Orpington cockerels I ever raised," writes Dan McCarty, Winthrop, Iowa, in sending in copy for his advertisement appearing in this department.

—Mathew Mertz, Des Moines, Iowa, as per advertisement elsewhere in this department of The Homestead, wants to buy Barred Plymouth Rocks, Houdans and other varieties of land and water fowl.

—Buff Orpington eggs from prize-winning pure Cook strain and Mammoth Buff geese are advertsed for sale by William Cook, Eddyville, Neb., in his advertisement appearing elsewhere in this issue.

—Geo. W. Harris, Shelby, Ohio, is offering Ancona cockerels for sale at prices stated in his advertisement found elsewhere in this department. He will also have chicks and eggs for sale in season.

—Mrs. W. L. Stoner, Henry, Ill., breeds Single Comb Rhode Island Reds exclusively. Her advertisement will be found elsewhere in this department. She writes: "I have a pen of fine colored birds from the East. I also have a range flock of 250 hens and pullets. They are hardy and healthy and good layers."

—Mrs. Bert Stiles, Garden Grove, Ia., whose advertisement appears in this department, reports as follows: "I won first on old tom, first on young tom and first on pullet at the Weldon Poultry Show, January 23-25, 1912." She has only a few toms left, but they are extra large boned and well marked.

—Mrs. Laura Mather, Clarksville, Ia., one of the best prize-winning strains in has seventy-five pure-bred, large, handsome Rose Comb Brown Leghorn cockerels which she says will give good satisfaction to lucky purchasers. Her advertisement appears elsewhere in this department.

—"The Mammoth Bronze turkey toms I am offering for sale in my advertisement in this paper," writes A. D. Walker, Memphis, Mo., "are bred from a strain of winners at the leading shows, including Chicago, Madison Square Garden, St. Louis World's Fair, Indianapolis, Kansas City, Peoria and state fairs."

—Jas. Cockerton, Whiting, Ia., writes: "I still have a number of good, big, early hatched Barred Plymouth Rock cockerels weighing eight to nine pounds. They have good combs and are well barred. Am selling them at $1, $1.50 or $2. Can guarantee to please Homestead readers." See advertisement in this department.

—Chas. J. Mackey, West Liberty, Ia., sends his egg advertisement for Single Comb White Leghorns to The Homestead and states that he is very anxious to book orders now for eggs to be furnished when wanted. In previous years he has had to return money for stock and eggs because of delay on the part of his customers in ordering until late in the season. Send for free circular today.

—Albert A. Foster, Russell, Iowa, in ordering the insertion of his advertisement of Barred Plymouth Rock cockerels, appearing in the regular department of this paper, writes: "We have been breeding for the past fifteen years and have purchased both stock and eggs from Bradley's best lines at good long prices. Our birds have never failed to win a very large share of prizes offered where we have exhibited."

—John M. Hall, Williams, Iowa, breeder of White Wyandotte chickens, in furnishing copy for his advertisement appearing in this department, writes: "During the month of January we sold over $100 worth of ducks by means of a three-line advertisement in your paper. We have tried other papers with our advertisement, but The Homestead beats them all to pieces. We have now sold all our surplus stock. We wish to thank our customers for the orders we have received and to announce that we are now ready to take orders for eggs from Mammoth White Pekin ducks and White Wyandotte chickens."

—Mason C. Ogg, Monroe, Iowa, breeder of Barred Plymouth Rocks, writes: "We have only a few cockerels left, but they are some of our best stock. Among them is the cockerel that won fifth in the recent Des Moines show, also a cockerel that scored 91¾ by Judge Shellabarger in the show room. We have our breeding pens mated for the season and find we still have some choice cockerel-bred pullets to spare. They are splendid in color, dark, snappy barring, good shape and bone, every one the daughter of a prize winner. We guarantee a square deal to everyone. We receive many words of appreciation from satisfied patrons." See advertisement elsewhere in this issue.

—With this issue of The Homestead Mrs. A. M. Johnson starts an advertisement offering eggs for hatching from the most select sort of Single Comb Rhode Island Reds to be found. These pens are headed by the first-prize cock at the Nebraska State Poultry Show a year ago and also from a pen headed by the second-prize cockerel at the Nebraska state show this winter. These eggs are the sort to buy if one wiches the very best sort of breeding stock and the prices named are as low as are possible to find for this class of stock. The second-prize cockerel this year was shown in a class of thirty-seven. Write for prices and mention The Homestead. Address Mrs. Johnsen at Clarks, Neb.

Fortmann's Single Comb White Orpingtons

ARE strictly high-class. Now is the time to place your order for cockere's of the better sort. Please let me know your wants. Address at once **Frank Fortmann, Box 23, Dyersville, Iowa.**

S. C. BUFF, BLACK AND WHITE ORPINGTON cockerels, hens and pullets. High quality, prize-winners, scored, unscored. Shipped on approval at reasonable prices. Eggs in season. E. B. Conable, Box C, Independence Ia.

BABY CHICKS.

BABY CHICKS. Baby chicks and eggs for hatching from 10 varieties of vigorous, farm-ranged birds. Our mammoth coal-heated incubator is the largest in Nebraska. Maplewood Poultry Farm, Exeter, Neb.

COCHINS.

BUFF COCHINS exclusively, large-framed, big-boned, even-colored, heavily feathered ckls. and pullets for sale. W. W. Vaughn, Marion, Iowa.

DUCKS.

Eggs from Mammoth White Pekin Ducks

HEADED by drakes scoring 96 to 96¾. Won two ribbons at Chicago Land & poultry show. Bred for 12 years. $2 for 13; $3 for 30; $5 for 50; $10 for 100. Address **JOHN M. HALL, - Williams, Iowa.**

EGG ORDERS NOW BOOKED from our champion strain of Indian Runners that won 1st at Chicago. A few choice drakes. I. L. Rennard & Son, Columbus, Ia.

I. R. ducks, both fawn and white, extra fine English penciled. Special prices on eggs for Feb. and March orders. Selma Collie Kennels, Oakland, Ia.

RUNNERS—Fawn and white and Fawn Indian Runner eggs for hatching. A few good I. R. drakes and Drakes at $1.50. R. H. Patterson, Vermillion, Ill.

FAWN and White I. Runners. Unrelated trio $5. Females $2 each. Write for prices on high-scored drakes. Address Mrs. C. A. Robbins, Grinnell, Ia.

DRAKES. Small flock. Young Pekin drakes. Will sell at reduced prices for one cent. Large and pure white. Address Lola Eames, R. 1, Ferguson, Iowa.

INDIAN RUNNER DUCKS and Toulouse Geese for sale cheap. Eggs $1 to $1.50; geese $2, ganders $2.50. Elsie McClure, Hampton, Iowa.

PEKIN DUCKS W. W. Wood, Clover Lodge Farm, Gladbrook, Iowa, has some choice large ducks for sale, either sex, reasonable. Write him what you wish for prices. Eggs for sale.

Genuine English Runner Duck eggs. Prize duck for Eggs. Send for booklet. L. D. Aikins, Dallas Center, Iowa.

GUINEAS.

White Guineas $3.00 pair. They do not stray. Easily raised. Address Ethel H. Shaw, - Monroe, Iowa.

DOGS.

SCOTCH COLLIES

STRONG in the blood of Buckler, a grandson of the great Southport Student. Also Parbold Peerie by Anfield Model. These great breeding dogs at the prices ordinarily asked for common stock. Address A. A. Martin & Son, R. 4, Box 107, Lincoln, Neb.

SCOTCH COLLIE PUPPIES

HIGH-class puppies, the **best blood** in America, from registered Sires and Dam's Beauties; and everybody pleased with them. If you want a Collie get my prices before you buy. Mention Homestead. **T. A. STEVENSON, SHANNON CITY, IOWA**

Collies Choice pups and brood bitches, trained drivers. Sales list free. AIREDALES, for hunters, watch dogs, companions, have no superiors, state your wants. P. L. Savage, St. Charles, Ill.

SCOTCH Collies. Bright, intelligent workers. Airedale terriers for hunters, watch dogs and companions. Grown stock, puppies for sale at all times. Write for large list. W. R. Watson, Box 125, Oakland, Ia.

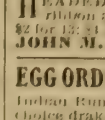
Fox Terrier Puppies for Sale

Nicely marked and great ratters. Very best breeding. Address M. R. ROGERS, Peru, Nebraska.

SCOTCH Collies. Bred females and young stock from imported and trained parents for sale. Also Airedale Terriers. Sunnyside Kennels, Cumming, Ia.

FOR SALE High grade Scotch Collie pups. Bargains if taken soon. Address, **T. A. GOUGH, Bristow, Iowa.**

MISCELLANEOUS.



52 VARIETIES of chickens, ducks, geese and turkeys. Birds score 90 to 96¼ by Todd. Thousands of blue ribbons and first sweepstake prize two years in succession. Largest poultry farm in northern Iowa 4-ct stamp for catalog. **E. & J. W. Trettin, Grafton, Iowa.**

M. B. Turkeys, Pekin Ducks

I HAVE about 7 M. B. turkey toms and a number of Pekin ducks, all first-class stock, for sale. Address Mrs. G. M. Grinstead, Mitchellville, Iowa.

55 BREEDS Pure-Bred Chickens, Ducks, Geese, Turkeys, also Incubators, Supplies, and Collie Dogs. Send 4c for large Poultry Book Incubator Catalog and Price List. **M. H. MINIKER, Box 32 Mankato, Minn.**

FINE THOROUGHBRED POULTRY

40 VARIETIES fine thoroughbred chickens, ducks, geese and turkeys. Fowls and eggs at low prices. America's greatest poultry farm. Send 4 cents for large 19th Annual Poultry Book. Address **R. F. Neubert, Box 807, Mankato, Minn.**

Barred Rocks. Bronze Turkeys

TOMS 23 to 26 pounds $5 and $6. B. P. Rock cockerels 7½ pounds $1.50 each; 8 pounds $2 each; 9 pounds $2.50 to $3.00 each; 9½ to 10 pound $4.00 each Weights guaranteed. M. V. Leeper, Redfield, Iowa.

White Wyandotte and Buff Orpington Cockerels. I still have good flock of each variety left. 7 to 9 lbs. Big-boned birds. At $1.25 each. Address A. G. Dreher, Audubon, Ia.

WANTED TO BUY Pure-bred poultry, turkeys ducks and geese. State variety, number you have and price in first letter R. V. Keeney, Fairground Station, Des Moines, Ia.

S. C. R. I. REDS. Eggs from pens headed by 1st-prize cock and 2d-prize cockerel Nebraska State Show. Write today. Mrs. A. M. Johnson, Clarks, Nebraska

THOMPSON Imperial Ringlet and Bradley Bros. pullets $2, ckls. $2 to $3. Stock direct. Eggs in season. Wm. Kerr, Box B, Winthrop, Iowa.

S. S. HAMBURGS Cockerels and eggs for sale. Prices right. Address H. C. SCHRAGE, Bristow, Iowa

Ancona Cockerels $2 to $5. Chicks and eggs in season. Send stamp for folder. Order early. Geo. W. Harris, R. 3, Shelby, Ohio.

PRIZE-WINNING Buff Orps., pure Cook strain Eggs only. Mammoth Buff geese, trios $15. Eggs. Write for mating list. Wm. Cook, Eddyville, Neb.

COCKERELS Ringlet Bar Rocks $1.50 to $5.00. Satisfaction guaranteed. Address J. RUSSELL LANG, - Brooklyn, Iowa.

S. C. R. I. Reds Eggs from high-scoring stock. $1.25 for 15. $3 for 50. $5 for 100. A. B. Walton, Wilton Junction, Iowa

About Rural Teachers.

By Minnie Stearns.

I AM much interested in the contribution of W. H. Miller, Wisconsin, on the subject "Investing in a Poor Teacher," and I wish there might be a round-table talk on the subject.

While attending a series of Farmers' Institutes in Central Illinois it was my privilege to listen to the best talk on this, or I may safely say on any other subject, I have ever heard. This man was a county director, and the only progressive one of the three—and this is not meant in a political sense either.

This director desired to repair, ventilate and properly heat the one-room building, by installing a modern heater. This heater by the way is situated not in the basement but in one corner of the room. Being president of the board he called nightly meetings for three weeks; if one of the opposing directors attended, both attended, each fearing the other would be won over in his absence. The final outcome was reached when the harder kicker of the two gave up in despair and disgustedly said: "If we've got to go to all that expense you have my permission to build a new house!"

Then came the question of a teacher. One member of this board was sending a trotting horse through the fair circuit and was paying a man of experience and trained for the work $100 a month and all expenses. These are the exact words of the same man who was averse to paying a teacher more than $45 a month. "The first school is always the best." The third member rather thought it policy to "live up to the new house" and employ a competent instructor.

"If we give sixty or seventy dollars a month, how do we know we'll get the worth of our money?" ventured the cautious one. "Leave that to me," replied the progressive one. When it was known that this particular school desired a $75 teacher—why, $75 teachers were legion. "Do you believe in practical problems?" "If necessary could you take your school to a neighboring crib or hay barn and get the contents of the grain in that building?" "Would you supplement the text-books with problems of the pantry and cellar and dairy?" "Could you tell these boys and girls of ours the right proportions of food that is required to grow strong bodies?" "Could you place books into their hands that would tend to draw them to the farm instead of away from it?" These questions, courteously asked, soon thinned the ranks of the high-priced applicants; the one chosen from the few remaining was given the preference because of her personality.

There is another school that I personally know. In some respects it is similar to the above. Like it, this school also has one progressive director. You see it requires one set of brains to look after the business of even a neglected country school. Care is taken in this district that only one of this sort is elected. The land is practically owned by a very few—immensely right they are too, and from the few are elected the two men who are "it." We might call the pupils a floating population. They come and go—living in the neglected tenant houses and moving on.

To keep down expenses, these men who will pay $4,000 for an automobile without batting an eye, employed a series of beginners, year after year, because they might be procured at a comparatively low figure. If things got too badly out of joint they would send their own one lonely duckling into town. This order of things continued year after year, when the county superintendent of school called them down. Then, to even things up, they employed an "experienced teacher" at the same price they had been paying beginners and supposed their duty ended.

As might be expected, this woman hated children and apparently was void of any sympathy in her whole nature. She began to reform the situation by engendering the hatred of every pupil, even the tiny tot that is so easily molded was not exempt. That school today regards all teachers as natural born enemies.

What to do about this new state of affairs? These people who come and go are not "tramps," as I heard one man who was meant for broader views say, but fellow creatures who will stay here and grow boys and girls, and these same boys and girls will meet your boys and girls and our boys and girls, and sometime in the no distant future our grandchildren will all have the same blood flowing through their veins. No need to shut our eyes to it, sure as you live it is bound to come. Sometime there will be consolidated schools and that will simplify matters. That is fully a generation away—and is a whole generation of boys and girls to be sacrificed in the meantime?

WHY FARMERS LOSE THEIR MEAT.

To the Editor of The Homestead:

The farmer as a rule kills his hogs on the eve of a cold wave, or on the first indication of a rise in the temperature after a cold spell. Either way is wise so far as butchering is concerned. But when the hurry and worry of that job is over, he either becomes indifferent, or he lacks in discretion in finishing up his work after the hogs are hung, and his neighbor helper has gone home.

He usually leaves them hang until night fall, then with the help of his family, he carries them into the smokehouse, or the kitchen, perhaps, stacks them up from three to four deep.

Now it just depends on the nature of the weather from the time those hogs were dressed until they were taken down whether the farmer will lose, or save his pork, for right here his knowledge, or his discretion seems to end.

The next morning, or if time is precious, he cuts up his meat yet that evening. He throws the lard cuts, sausage trimmings, and leaf lard into a tub; the ribs, back bone, and such like into another, for the women to tend to, while he salts and packs down into a box the sides, shoulders and hams, into which he has taken extra pains to rub the salt; and he goes to bed glad that his day's work is finished so that he can go at something else in the morning. Now, as I said before, it just depends on the weather conditions whether he saves or loses his meat. If he saves it he thinks nothing of it, but if he loses it he curses his ill luck and gives his family, perhaps, the benefit of his ill humor while he wonders audibly why it could not be as good as it was last year.

A dressed hog should hang at the very least twenty-four hours if the weather conditions are favorable meanwhile, not too cold, or too warm, before it is cool enough to salt and pack down. And it is better even under such favorable weather conditions to wait another twelve hour.

The animal heat must be removed to the bone before the salt is applied. And as the natural cooling process is the only one to which the farmer can resort, he must allow sufficient time for it to cool. And to do this properly, and safely he must allow his meat to hang, and hang clear of any thing so that the air may pass all around it, and the animal heat may come to the surface and pass out unhindered, or unobstructed.

If the weather is above freezing point when the hog is dressed, and remains above for twenty-four hours, the cooling process is complete, and it can, without danger of loss, be cut up and salted. But on the other hand, should the temperature run below that point during the aforesaid twenty-four, and should the surface freeze, it should not under any circumstances be touched at the end of twenty-four hours, nor for several hours after it has thawed out entirely. And right there is where the farmer, in his hit or miss way of doing things, misses it by stacking up his frozen hogs within a few hours of killing them. The cooling process is stopped by sudden cold, and when the surface thaws sufficiently for it to resume the process the pieces are in close contact with one another which not only prevents the animal heat from escaping, but throws it back upon itself, and causes the meat to sour at the bone.

Now, on the other hand, if the temperature rises rapidly after the hogs are dressed, allow them to hang outside as late as it is safe, then when taken to a place of safety, by all means hang them up. And should the temperature continue rising, cut your meat up and trim as for salting and packing, but instead hang the pieces up clear of each other, and the wall. Leave it hang, even if the weather is warm enough to wing a bluebottle, it is safe so long as the blood does not come to the surface upon its lean parts. And as it requires several days for this change, your meat is safer thus by far than if you were to hasten the salt and pack process because the weather is alarmingly warm.

The smokehouse should be provided with plenty of iron hooks, suspended from strong cross timbers laid upon the rafter plates. These need not be stationary, and indeed are better not so for convenience in suspending the hogs which should hang clear of each another, as well as the meat.

Country lard is worth two cents more per pound than butchers' or tierce lard, if it is properly rendered. And to do this the rind must be removed, also all lean meat; and the pieces cut as nearly uniform in size as possible, so that they may all be ready for the press together.

Put a quart of cold water to every gallon of fat, and let it have its own time, that is, do not hurry it, but allow it to boil unceasingly until the water is boiled out of it. The fat is then so thoroughly cooked that it is easily speared with a fork.

At this period of the process it requires watching and frequent stirring to the bottom of the kettle as it is inclined to form a sediment on the bottom, and burn.

When the fat is of a light brown color and floats upon the surface it is time to remove it from the fire, and turn it into the press.

The cracklings will prove the success of your effort. If they are brownish gray in color, and fibrous looking in texture, though hanging in a compact peice, your lard will be white and will at the end of eighteen months be sweet and good.

Now if this process of lard making, notwithstanding it is worth from two to three cents more per pound than any other, is too painstaking, let me give you one that is more commonly used:

Cut the fat into chunks of various sizes, removing the rind on the firm pieces only, pay no heed whatever to the lean streaks that run through the best pieces of fat; ignore the blood-shot tissues that fringe the leaf lard, and throw them all into the same vessel, to be gathered up promiscuously, and put into the kettle to cook.

Add enough cold water to keep from sticking to the bottom, and fire up. Let your aim be to "fire up," for the fat will fry furiously, and be ready for the press the sooner. Of course, you have to stir it often to keep it from sticking to the bottom, but no matter. You will soon be through with the stuff.

When you remove your cracklings from the press, what have you? Look and see. The leaf lard is crisp and dark brown; the blood shot fringed ones, black; the lean streaked ones, which through persistent stirring up from the bottom have just escaped burning, while the rind pieces, those which are not still stuck to the bottom of the kettle, are white next to the rind, and show want of greater pressure to remove the lard from the chunks of cracklings. Removed from the press, the pieces fall apart readily. Why? Because the fibrous tissue of the fat has been fried instead of boiled to separate it from the lard.

Look at your lard the next morning. What color is it? About the color of your thorough bred Jersey cow, a smoked cream. A. Le Faivre.

The Housewives' League of New York, which has branches all over the country, threatens to declare a boycott of beef if the prices do not soon come down. Sometime ago they boycotted butter and the price fell soon, and it is thought the boycott will work easier with beef.

PEERLESS

SELF-RAISING GATES

swing over the snow banks or other obstructions, no shoveling or digging when your time is worth more for something else. Every part of the Peerless is

Heavily Galvanized

A rust-proof coat, no paint to wash and wear off, leaving the steel red, rusty and unsightly.

Built to stand hard usage—big, massive frames; all No. 9 wire filling and a double safety latch.

Wonderful Tool Sharpener Lightens Farm Work

Sharpen your bluntest axes in three minutes, shape up your plow point in ten minutes, grind your sickles, ensilage knives, disks and all your tools in a few minutes without hard work—try this fast tool grinder with its wonderful artificial **diamond** wheels on your own tools for 30 days free. Send for free book from which you can select the outfit you like best and then, when you make a selection, I will send it on 30 days' trial. Use it all you please for 30 days, and if you don't want to keep it, return it at my expense. No money needed in advance.—C. J. LUTHER, Pres.

Read extract from letter of T. F. Hagan, Cash. 1st Nat. Bank, Glendive Mont.

"If it was not the best thing of the kind I ever saw I would have returned it.

Any farmer who owns machinery that needs sharpening cannot afford to be without it. My man sharpened 218 shoe discs with it in less than a day that would have cost me $14.40 for sharpening at the blacksmith shop."

J. W. Suddard, Newark, Del., writes, "It took my boy just three minutes to put a very dull ax in perfect order. Life is too short to use the old fashioned grindstone when the Luther Grinder can be had so cheaply It is like comparing the latest improved harvest machinery with the old fashioned scythe and cradle."

Luther Farm Tool Grinder

DIMO-GRIT wheels on Luther Grinders are made of artificial diamond crystals made of the same elements as real diamonds, fused in the marvelously hot electrical furnaces that melt fire brick like butter. They cut steel 25 times faster than grindstones—ten times more efficiently than emery—will not draw temper from steel—no need of cooling with water. The Luther Farm Tool Grinder is built all of metal—has enclosed shaft drive like an automobile, dust-proof bearings—patent tool rests and attachments for grinding sickles, discs, etc.—does all farm grinding, plow points, cultivator blades, etc.

In an addition to tool sharpening attachments, this machine has separate attachments such as forge, rip saw, jig saw, drill, lathe, milk tester, etc., all of which add to the wonderful utility of this machine. Any one or all attachments are furnished as desired.

Agricultural Colleges Recommend It

"I find the Luther Grinder an ideal machine for general farm use, and I believe it will be money well spent for any farmer to have such a grinder to keep the tools in shape on his farm. It is far in advance of the old fashioned grindstone. The machine is well put up, and I am happy to say is sold at moderate cost. HENRY G. KNIGHT, Director of Agriculture, University of Wyoming, Laramie, Wyoming.

Write for Free Book

which tells an interesting story of this wonderful artificial diamond sharpening substance, gives pointers on tool sharpening and illustrates Luther Farm Tool Grinders. From this book you may choose any outfit on 30 days' trial, without paying for it in advance.

Luther Grinder Mfg. Co., 583 Stroh Bldg., Milwaukee, Wisconsin

$850 Detroiter $900

11-4 Miles on a Teacupful of Gasoline

Get a Detroiter---for economy as well as for looks and action.

The figures quoted above mean that every Detroiter (as shown by a long series of tests---not claims, but actual tests---made over all sorts of roads and in all kinds of weather) averages from 20 to 25 miles on a single gallon of fuel. Its long stroke motor and ball bearings throughout are a marvel of engineering for economy.

In tire wear and depreciation the Detroiter is equally saving.

Are you looking for an automobile that is as exceptional in after cost as in first cost.

Then find out about this remarkable car. Write today

Herefords in 1912.

By. R. J. Kinzer, Secretary American Hereford Cattle Breeders' Association.

THE past year, from a Hereford standpoint, has been very successful and satisfactory. The breed has made splendid exhibits at the leading shows and fairs of the year. These exhibits have not been confined to a few of the fairs held in the central states, but have extended from New York to California and from Mississippi and Louisiana to Ontario, Canada.

The breed is fast coming into its own in the favorable consideration received from ranchmen, farmers, feeders, packers and consumers. During the past year the demand for breeding stock has been strong from all parts of this country and from several foreign countries. Cattle have been exported during the past year from the United States to Brazil, Uruguay, Central America, Cuba, Honolulu and Canada. It is also a fact worthy of mention that there has not been an importation of Hereford cattle to this country from England for nearly ten years and those most familiar with the cattle in both countries, do not hesitate in saying that the Herefords of the United States are better today than those to be found in England. The Herefords are the only breed that have been bred and developed in America until they are better than the cattle in their native land. This is a most credible thing to be said of the breeders in America.

It is also a fortunate thing for the breed that they have always been free from pedigree and color craze. Hereford breeders have almost universally, in making selections of breeding stock, given first consideration to individual merit, rather than to some particular fad or fancy in breeding. This undoubtedly has done much to place the breed in the enviable position which it holds today.

At eighteen shows and fairs of the past year, where competition in the steer classes was open to all breeds, Herefords have been awarded the grand championship of these classes. The following is the name of the show, its location and the name of the exhibitor of the champion steer at each show:

National Western Stock Show, Denver, Colo.; C. A. Tow, Norway, Iowa.
National Feeders' and Breeders' Show, Fort Worth, Texas; C. M. Largent, Merkel, Texas.
Pacific Northwest Live Stock Show, Portland, Ore.; University of Idaho, Moscow, Idaho.
Iowa State Fair, Des Moines, Iowa; Robt. H. Hazlett, Eldorado, Kan.
Indiana State Fair, Indianapolis, Ind.; J. H. & J. W. Van Natta, La Fayette, Ind.
Interstate Fair, Sioux City, Iowa; C. A. Tow, Norway, Iowa.
Oklahoma State Fair, Oklahoma City, Okla.; Robt. H. Hazlett, Eldorado, Kan.
Missouri State Fair, Sedalia, Mo.; University of Missouri, Columbia, Mo.
Colorado State Fair, Denver, Colo.; A. L. Weston, Golden, Colo.
Mississippi State Fair, Jackson, Miss.; W. J. Davis & Son, Jackson, Miss.
Louisiana State Fair, Shreveport, La.; C. M. Largent, Merkel, Tex.
Michigan State Fair, Detroit, Mich.; J. H. & J. W. Van Natta, La Fayette, Ind.
Montana State Fair, Helena, Mont.; A. B. Cook, Helena, Mont.
California State Fair, Sacramento, Cal.; A. B. Cook, Helena, Mont.
Texas State Fair, Dallas, Tex.; C. M. Largent, Merkle, Tex.
Northwest Live Stock Show, Lewiston, Idaho; Jones Land & Cattle Co., Wisdom, Mont.
Interstate Fair, Spokane, Wash.; A. B. Cook, Helena, Mont.
Utah State Fair, Salt Lake City, Utah; Geo. Chandler, Baker City, Ore.

In addition to this remarkable record, the grand championships have been awarded to Hereford car loads of fat steers, where competition was open to all breeds, at the Denver Show on a car of Hereford steers exhibited by Clayton, Murnam & Saunders; at Fort Worth, to J. W. Cook & Son of Beeville, Texas on a load of Herefords to their own breeding at Portland, to E. W. Coles on a load of Hereford steers bred by George Chandler of Baker City, Oregon; at the American Royal Show, to Geo. W. Wertz, of Alma, Neb.; at Toronto, Canada, the champion car load was awarded to Simon Downie & Son of Carstairs, Alta., Canada; at the Denver Show last January, the champion load of feeders was a load of Hereford yearlings owned by Monte Blevins and sold for $8.00 per hundred at the close of the show to Peter Hopley & Son of Lewis, Iowa, who fed them out during the summer and sold them during the recent International Show for $12.30 per hundred. They had made an average daily gain from the weights in Denver to the weights in Chicago of practically two pounds per day. At the American Royal Show, the champion load of feeders was Herefords exhibited by Washington & McDonald of Manhattan, Kansas and at the recent International Show, the well-known Matador Hereford steers were awarded the grand championship in the feeder division.

Jesse Engle & Son of Sheridan, Mo. won the championship carcass at Denver with a yearling Hereford steer. At Fort Worth in March, Lee Bros. of San Angelo, Texas won championship on a Hereford steer that dressed a higher per cent than the grand champion steer of the previous International Show. The grand champion steer of the Portland Show in March sold at auction for $1.20 per pound live weight, this being the second highest price ever paid for a steer on foot. The grand champion steer of the Northwest Live Stock Show held at Lewiston, Idaho sold for $1.05 per pound, being the third highest price ever paid for a steer.

The public sales of the past year have been most satisfactory. 931 heads of Herefords have been sold at an average price of $182.58 per head. Of this number, 419 were bulls which averaged $216.29 and 512 were cows, averaging $154.80. Association sales during the past year averaged as follows:

Denver	$182.00
American Royal	307.00
International	325.00

At nearly all of the leading fairs, the breeding classes have been well filled with uniformly good individuals. The absence of inferior entries in the Hereford classes has been a subject of general comment during the entire show season.

The future is exceptionally bright for the Hereford breeders. The high price of beef, the strong demand for breeding cattle at home and abroad, together with the growing popularity of the breed, is sure to materially advance the price of good pure-bred Hereford cattle far beyond where it is today.

EXCELLENT BOOK ON GASOLINE ENGINES.

A book of 700 pages with500 illustrations under the title "The Gasoline Engine on the Farm" has just come from the press. The author, Victor W. Page, designed this book for the workman of the farm, that is the man who is called upon to operate the great modern labor saver, the gasoline engine. He has avoided technical statements of law and philosophy and has used the simplest kind of language that will convey his meaning intelligently. Some idea of the scope of the work may be obtained from the chapter headings. These include: The Call and the Answer; The Internal Combustion Engine; The Combustion Chamber; The Piston and Its Auxiliary Parts; The port andVavle System; The Carburetor The Ignition System; A Chapter on Engine-speed Regulation; The Crank Shaft and Its Bearings; Setting the Engine; The Fuel Supply; Lubrication; Elimination of Engine Troubles; Selecting and operaing the Engine; The Traction Engine; What Is Best in a Tractor; Power Transmission; The Feed Room; The Workshop; The Farm Wood Pile; Orchard and Garden; Irrigation; The Woman's Story; Homemade Conveniences; Modern Power Applications; The Ideal Farm and Useful Rules and Formulae.

Arrangements have been made so that this paper can supply its readers promptly with this volume, the regular publisher's price being $2.50. It is a book that ought to be in the library of every man who owns a gasoline engine of any description.

When Hog Cholera Rages It's a Fine Thing to Know YOUR Hogs Are Safe

E. Myers, President, E. Myers Lye Company

Next time you read in your paper about an epidemic of hog cholera, how it is killing off hogs like flies and causing the loss of thousands and thousands of dollars, and you are beginning to wonder where it's going to break out next, just remember this: You can assure the safety of **your** hogs by taking this inexpensive precaution—go to your dealer and get a few cans of

Merry War Powdered Lye

Mix it with the hog's feed or drinking water according to the directions printed on the label and feed it **twice every day. This treatment has prevented hogs from catching cholera, even though raging right in the neighborhood.** It has been **proved** time and time again. Here is just one example among hundreds of similiar ones:

"We have had hog cholera all through our district. Those who have been using Merry War Powdered Lye have missed it. One man in particular who buys it by the case has cholera all around him, but so far his hogs have escaped." **C. M. COOPER, Prop., "The Right Place," Dawson, Nebraska.**

There Are No Substitues

Don't experiment with an old-fashioned, ordinary lye. Get MERRY WAR POWDERED LYE—the **time-tried** remedy—the specially prepared lye that is **safe** to feed to hogs—that actual **experience** has **proved** to be the **safest, most dependable preventive** of hog cholera the world has ever known. **Insist** on the genuine and **refuse substitutes.**

Costs only 10c a can—enough to protect a hog from cholera, keep him free from worms and make him strong, healthy and on his feed for **two months.** Tones up digestion and prevents feed waste by changing every pound into firm flesh and juicy fat. Produces the kind of hogs that bring top notch prices.

At the price of **5c per month, per hog** you insure against sickness and greatly increase the size of your hogs.

Make a test for yourself. MERRY WAR POWDERED LYE comes in 10c cans **(120 feeds per can).** It is convenient to buy in case lots—4 dozen cans for $4.80 at grocers, druggists or feed dealers everywhere. **There are no substitutes. WE WILL SUPPLY YOU DIRECT $4.80 for 4 dozen cans —IF YOUR DEALERS WON'T SUPPLY YOU.** Write for our valuable booklet "How To Get The Biggest Profits From Hog Raising." Sent FREE for the asking.

Farm Horses Fit For The Show Ring

ABSORBINE

TRADE MARK REG. U.S. PAT. OFFICE

Strengthens the muscles and ligaments, keeps out soreness, prevents fatigue, stops pain and lameness, reduces swellings and inflammation. Don't own a lame, blemished horse—increase his working and selling value by making him sound with ABSORBINE.

Absorbine does not blister or remove the hair and horse can be used

Absorbine is a mild, pleasant liniment to use—it is healing, soothing and invigorating and a positive **Antiseptic and Germicide.**

USE ABSORBINE to remove **Bursal Enlargements, Bog Spavins, Thoroughpins, Puffs, Shoe Boils, Capped Hocks, Swollen, Painful Swellings** and affections; to cure any strain or lameness; to repair strained, ruptured tendons, ligaments or muscles; to strengthen any part that needs it. You can buy Absorbine at regular dealers, price $2.00 per bottle, or sent to you, express prepaid, with full instructions. Write me about any case on which you would like advice. Horse book 4A free. Manufactured only by

W. F. YOUNG, P. D. F., 391 TEMPLE STREET, SPRINGFIELD, MASS.

Great Horse Story "Kate and Queen"

By Prof. Jesse Beery **Free**

A most wonderful and unheard of book offer. It equals the famous "Black Beauty" in human interest—surpasses it in practicability. "Kate" a victim of poor handling is vividly contrasted with "Queen" who was more fortunate. You sympathize with one—rejoice with the other—even as you sigh for the slum waif and laugh with the child of fortune.

Prof. Beery has skillfully woven into this intensely interesting and true story, many valuable suggestions for handling horses—a result of a lifetime's experience.

SPECIAL FREE OFFER

Prof. Beery desires that every horse owner, trainer, breeder—everyone interested in horses—should read this great story. To make it possible, for a short time he offers every interested horseman a copy **FREE.** He only asks that ten cents be sent to cover postage, and the names and addresses of five other horse owners. Send U. S. Stamps or coin. If you have even a passing interest in horses—if you own, train or breed them, you will gather from this book a fund of knowledge worth many dollars to you. Send for copy.

FREE With each book we also send free a beautiful colored picture of Queen--oil painting effect--suitable for framing.

PROF. JESSE BEERY, Box 684 Pleasant Hill, O.

GUARANTEED to pulverize and evenly spread all kinds and conditions of yard and stable manure, lime, ashes, compost and other fertilizers.
GUARANTEED to cover three full rows—5 to 7 feet.
GUARANTEED to be the best and lightest running spreader.

Light. Low-down. Two Beaters. Strong.

NEW IDEA Manure Spreader

Won the Hartman Contest

See the two beaters! See the distributing paddles! See the simple mechanism! No cogs or bevel gears. No choking. No bunching. Never clogs. Cuts manure into shreds. Easy loading—and carries big load. Easy haul for double team—tracks with standard wagon. Light—but stands hard usage. Rigid construction throughout. Solid bottom—will not warp. Perfect endless conveyor cannot slip. All power direct from rear axle. Only two levers to operate. Strong metal wheels.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office

SYMPTOMS AND TREATMENT.

GARGET.

One quarter of cow's udder becomes swollen and feverish. During the time it is swollen and has fever cow does not eat; if any, very little. Also the milk comes in chunks and thick. Will last from three to five days. After the fever and swelling have gone cow gives very little milk out of affected quarter, sometimes none. Last winter I had three cows affected. One lost two quarters for the season. At this writing have two cows affected, one with rear quarter and one with front quarter. Appears to hurt her very much. The one cow is the one that lost two quarters last winter. The other is a young cow with second calf, and has been giving five gallons of milk per day. Feed, ensilage, fodder, crushed ear corn mixed with oats. Ensilage is fed morning and evening in the stable. Fodder is fed out in the yard about midday. This is the second season that I have been feeding ensilage. Never noticed this trouble until I began feeding ensilage last year. Is it possible to feed too much ensilage?

Garget of the character present in your herd is a contagious disease due to germs which are present in and on the udder and on stall floors and are carried by means of the milker's hands. If every dairyman would instantly isolate any cow that shows the slightest signs of udder trouble and keep her apart from other cows until perfectly recovered, garget would be far less common than it is at the present time. This should be made a general rule in dairying. Cleanse, disinfect and whitewash the cow stable including ceilings, walls and floors. Treat a case such as you describe by administering at the outset of the attack one pound of epsom salts with half an ounce of ground ginger root and a cupful of black strap molasses in three pints of warm water as one dose. Follow with half an ounce each of saltpeter and fluid extract of poke root twice daily in water until the aggravated symptoms subside. Foment the udder three times a day with hot water and strip milk or other fluid away three or four times a day. At night rub the udder thoroughly with camphophenique.

LAME SHEEP.

Have some sheep that are lame and have been lame about a year. Have treated them with carbolic acid. I think it is foot rot.

Separate the lame from the unaffected sheep and keep all the sheep out of mud, slush, filth or gritty matters until lameness subsides. Treatment of foot rot consists in cleansing the foot, cutting away every bit of rotten, diseased, or under-run horn of hoof, then immersing the foot for a few moments in a saturated solution of sulphate of copper used as hot as the hand will bear. Afterward turn the treated sheep into a pen on the floor of which slaked lime has been spread two or three inches deep. Repeat the treatment as often as found necessary.

WORMS.

Please tell me what to do to rid a thirteen-year-old horse of worms and also a pony seven months old.

As often stated here, a good mixture for destruction of worms is made by mixing together two parts of salt and one part each of sulphur and dried sulphate of iron. The dose for an adult horse is one tablespoonful in the feed night and morning for a week; then skip ten days and repeat. Colts take less doses according to age and size.

SORE SHOULDERS.

About a year ago one of our horses had a sore shoulder and we had a core removed from it and it healed up, but as soon as we began working her the shoulder became sore again. Is there a collar that will protect her shoulders? We use her at farm work.

To prevent sore necks from the rubbing of the collar it is important to keep the harness clean and dry and have it fit properly. Possibly your horse may do better if worked in a strong breast collar instead of a neck collar, or a "humane" collar may be tried. Use a mixture of two ounces of tincture of iodine and six ounces of extract of witch-hazel as an application once daily to parts that are irritated by the collar.

Saving Feed and Horseflesh.

By M. Coverdell.

MOST farmers do not consider that it requires any special skill to manage the keeping of horses through the winter months, and as a result, many costly mistakes are made—errors which, if corrected with proper care and feeding systems, would net a wonderful saving in feed and horseflesh. We hear much these days about letting the horses follow their natural instinct (or whatever they may call it), and range out doors during the winter, choosing shelter only from the most severe or blustery weather, and while this is acceptable in a certain measure, it is hardly practical in all cases, as some of the animals would not seek shelter from the most severe weather we have during the whole winter.

The above-mentioned method of handling horses in winter is not at all in keeping with modern conditions, as we have developed different strains of horses which, while strong and vigorous, cannot adapt themselves to such treatment. They do not demand pampering and close housing, but they do require ample shelter from severely cold or stormy weather.

The kind of shelter furnished the horses will depend much upon various conditions. Horses that are in harness or saddle considerable of the time during the day, must be given snug, comfortable quarters at night. We make this an imperative rule, since heavy hauling or exercise through the day, then exposure of the animals at night, would be sure to have a most deteriorating effect on their entire systems. Stock horses, we will admit, should be ranged most of the time in winter, but even these we keep an eye on, and if we think occasion demands it, they are given shelter. There are times when it is the height of foolhardiness to even think of any animal on the farm being left out and exposed to the elements. Colts we believe in being furnished with the best of shelter every night.

By shelter is meant stalls, except for the stock herd. Individual box stalls are best for both colts and grown animals, as they are easier to keep clean, and the horses are not always kicking or biting one another. No horse likes to lie down in his own filth; so all stalls should be kept cleaned out, and well bedded at night with clean, dry straw, which not only promotes better health for the horse, but saves much brushing and currying, besides avoiding the hard task of digging packed manure from the stalls in the spring.

While stalls should be so arranged that they will have light and ample ventilation overhead and in front of them, the stall proper must be snug and warm; no wind coming from the rear. The horse that stands tied in the stall is too inactive for the sifting winds to steal in at cracks around him and chill his body. He is much more pervious to the action of cold air than the horse that is out in the open, where he can shift about and keep up a good circulation. Plug up the knot holes and cracks around the stalls, thus insuring the horses' comfort, and making it unnecessary to supply them with so much feed to keep up body heat and maintain normal flesh.

Proper care of the horses in winter is another point that returns big dividends, since it saves feed and keeps the animals in better condition. Horses that are worked or driven only at intervals should be handled in a manner not to cause overexertion, as stiffness, lameness and even some permanent ailment is apt to result from abuse in this connection.

Any horse that becomes heated will require careful handling while he is cooling off, or colds and more serious kindred diseases often follow a sudden drop in the temperature of his body. In no case should the heated horse be allowed to stand in the open air while cooling off; nor in a draft. Blanket him and stand him in a snug stall for an hour, giving him a very scant supply of hay to nibble at. After an hour, he may have a gallon of water, with the chill removed; then a generous quantity of hay. In a couple of hours he may drink his fill of water, at about the temperature of well water, when he may be given a regular feed of hay, followed in a half hour with his grain ration. Unblanket him then, rub him down well with an old sack or some clean hay, curry and brush him, and in ninety-nine out of every 100 cases, no evil results will follow.

It should be borne in mind that all horses must have open-air exercise every day when the weather will permit, especially those which are accustomed to working a goodly portion of the time, as a day off, standing in the stall, is a change that does not agree with them. Even the stallion should have a paddock in which to exercise; the brood mares and colts a lot of ample size to move about in and enjoy their sun bath every day. Aside from the beneficial effect exercise wields in keeping the digestive and assimilative organs of horses in first-class working order, close confinement in the stalls, especially on board or cement floors, encourages various ailments of the hoofs and among the joints and ligaments of the legs. Even where the weather is extremely cold or blustery, a half hour in the open air will prove beneficial to any horse except those that are in an exceptionally delicate or run-down condition.

Following along certain lines in feeding horses is just as essential and profitable as that of furnishing the cows with those rations conducive to dairy profits. It is more than a waste of feed to give an idle horse as much hay and grain as the work horse, as his body does not require such an amount, and the overloading of his stomach is a detriment to his digestive system.

Likewise, when the workers have a few days off, it is advisable to cut their roughage ration down about one-third and their grain one-half, increasing them to the regular amounts when the animals are again put in harness. Cleanliness and variety of rations for the horses during the winter months plays an important part in their good health, vigor and general condition. Musty or moldy hay, dry, woody, coarse and fibrous roughage of all sorts, are to be avoided in feeding horses, especially the colts, stallion and brood mares. These last in no case should be fed on such roughage.

Where it seems absolutely necessary to feed a certain percentage of musty hay, it should be dampened with water before feeding, to avoid part of the detrimental effect. However, in most cases it will pay the farmer to sell off his second or third-grade roughage at even a low price, and invest the money in first-class feed. Clover, alfalfa and oats hay, mowed as the grain was turning from "milk" to "dough," form excellent roughage for the horses. If clear timothy is at hand, it may be made one-half the feed, along with any one of the above-named hays, but is not always suited to feeding horses as a single roughage.

In feeding brood mares and colts too much heating corn is to be guarded against. They will of course require a certain amount of it to keep up body heat and maintain normal flesh, but in the main, they should be given those grains and mill feeds that will keep them in good appetites, promote ideal digestion, insure good health, and nourish bone and muscular tissue, rather than form fat. Equal parts oats, bran or shorts, and corn chop, form an excellent ration for horses, a couple of handfuls of oil meal being added twice or three times a week, to serve as a laxative for the bowels. Oats may seem prohibitive in price, but for brood mares and colts, we consider that they have no substitute, and should form a part of their daily rations. For horses that are worked or driven considerably, a ration of one-half corn chop and ear corn, the balance being oats and bran, is more strengthening, and no harmful effects are apt to be felt in feeding it. Salt being an excellent appetizer, tonic, conditioner, and of great importance in the processes of digestion and assimilation, should be kept where the horses can reach it at all times.

We mention the currying of horses separately from the other items of care, as it is a point which, while advocated by many, is thoroughly understood by a very few, and not only contributes to the good health of the animals, but is sure means of economizing in feed. A man in a certain branch of the government service, where horses are used in such a manner as to require an extra amount of currying, told the writer that he considered the point of thorough currying as a saving of one-third the feed bill; then added that he believed it would save one-half of it.

Of course, giving the horses a neater and cleaner appearance is one cause for some people currying the animals well, and this, together with the fact that it makes the horses feel better, is sufficient reason for the pains so taken; yet, there is another distinct and separate reason from these, and one which actually adds dollars to the worth of the horse and to the feeder's pocket by economizing in feed.

Coming down to the real point: As a rule, horses are not as active in winter as they are in summer; their skins do not become warm, expand and the pores open up, except in cases of profuse sweating (which are very rare, and even dangerous). This leaves the surface of their skins somewhat dry, scaly, and compact; so that many impurities of the body which were thrown off by sweating in the summer are left in the body during the winter months.

What must be the effect of confining this foul refuse in the horses' bodies? Again, because of this same condition of the skin, the filth and dust that settle on the animals' hair and body are not worked off by perspiration as they would be in summer. This accounts for the hair of the horses standing on end and appearing to be a veritable bed of dust, which rolls forth a diminutive cloud every time one slaps the animals on any part of their bodies.

Currying and brushing loosen these scales of the skin, open the pores and invigorate the nerves which nourish the skin, so that the combined effects remove all impurities. In this healthy condition, is it not safe to assume that the horses will require less feed, and at the same time possess greater vigor? We see many horses with tails scuffed up at the roots, thin and short. Thorough currying, from one end to the other, and straightening out the hairs, would transform these unsightly tails into long, silky, flowing ones that would be an ornament to any horse. The same is true of the mane. The neck directly under the flowing part of the mane rarely ever is touched by comb or brush, nor are the roots of the mane brushed and enlivened as they should be. Given proper attention in this respect, the mane will become what it was intended to be—an ornament without which the horse's forequarters would depreciate 99 per cent in general appearance.

GALLOWAY'S
Own True Story
Special To the Readers of This Paper

EVERYBODY likes a good story. If it is a true story, so much the better, for it is said that "truth is stranger than fiction". The Romance of American Business is filled with many interesting chapters—but none more fascinating than the wonderful results achieved by the Farmers of this country in transforming a cornfield on the edge of Waterloo, Iowa, into a vast, modern hive of industry giving employment to hundreds of skilled workmen and turning out tens of thousands of Engines, Cream Separators and Manure Spreaders in a constantly increasing stream.

The story of the rapid rise of William Galloway from a Farmer's Boy to the World's Greatest Manufacturer of Farm Implements selling direct from factory to farm is one of those thrilling fact-stories that grip the interest and tingle the nerves of every red-blooded American. To achieve what he has done in a few short years would have been impossible without the active co-operation of his Farmer Friends. In his own true story, told below, William Galloway frankly admits that all he has today he owes to his Fellow Farmers. Every Farmer in the land—and every Farmers' Boy—should read the remarkable true story told below by America's Famous Farmer-Manufacturer—whose career has proved another demonstration of the fact that

BY WILLIAM GALLOWAY
President WM. GALLOWAY CO.

"Truth Is Stranger Than Fiction"

I am going to tell the true story of how I happened to start this business.

As a rule, the beginning of all big things *is* small. And the growth of this great industry at Waterloo, with over 125,000 customers buying $3,000,000 a year from us, is no exception to the rule.

Sixteen years ago I was a farmer's boy on my father's farm (where I was born) near Berlin, Iowa. My parents still live on the old home place. There were four boys and four girls in the family.

My first job on the farm was to help milk the cows and teach the calves to drink skim-milk out of a pail. I was taught to do this job, and do it right—as my father was very strict with us boys. It was work! work! work!—early and late.

My early training on the farm then seemed very rigorous, and sometimes a real hardship—but I can look back to it now and realize the great blessings of health, practical knowledge of farm conditions and self-development in character it brought me.

Now I operate two big farms—nearly 2,000 acres in Canada and an up-to-date business dairy farm just on the edge of Waterloo. The experience I gained as a boy helps me to this day.

My First Start in Business

One day I picked up a farm journal (it was The Iowa Homestead) and saw an advertisement asking for agents to sell windmill springs. I answered the ad.

This was the starting point of my business career.

It was really the first step.

I made a deal with this concern and went out and sold hundreds of windmill springs, traveling from house to house with a horse that I traded for and an old buggy that cost me $12.50.

I found out in this experience that 99 farmers out of every 100 are square and honest, and I have to thank many of them for their friendly treatment in those early days when they gave me the "glad hand", a good meal and place to sleep.

It was this feeling of gratitude to my farmer friends that prompted me last year to build the splendid $60,000 Agricultural Club at Waterloo and dedicate it to the farmers of America, their wives and families.

Getting the Inside Facts

One day I met an implement dealer who wanted me to work for him by the month, which position I accepted; the first thing he did was to call me into the private office and in the strictest of confidence tell me the cost or wholesale prices of the goods, also the selling prices.

This firm which I represented soon branched out into the wholesale business, selling wagons, buggies and other implements in Eastern Iowa. I was again confidentially advised of the cost prices, only this time it was a few notches lower, as this firm was now a jobber. I was then sent out as traveling salesman, going from town to town selling implements to dealers, only this time at wholesale prices.

My Eyes Are Opened

Now right here was where I really awoke to the true situation of the farmer compelled to pay exorbitant prices on account of the middlemen between him and the factory which actually produced the goods.

It set me thinking—hard! I said to myself, "Wouldn't it be a grand thing for the farmer if he could only buy engines, manure spreaders, cream separators, harrow carts, etc., at wholesale prices or even less?"

That bee stung me good and hard. The idea wouldn't down, but kept buzzing in my head. And I made up my mind that sooner or later I would find a way to become a Farmers' Manufacturer, selling direct from factory-to-farm at one small profit.

In the course of two years I went into partnership with the firm I traveled for, and then after a year and a half I purchased the interest of my partner and took the management of the business myself. This was the third step. I then commenced to manufacture harrow carts. I had made one of my own on the farm and believed they would sell.

I used to sell this harrow cart to dealers for $8.00—not as good as the one I sell to farmers today for $5.05.

I Begin to Sell Direct

Well, it wasn't long before I made up my mind to sell direct and in spite of much opposition and prediction of failure I took the vital step that has meant so much to the farmers of this country.

While at first my progress seemed slow, yet from that day to this it has been sure and steadily upward. I added other articles—Engines, Cream Separators, Manure Spreaders, etc.—all made in my factory and sold on the same direct-to-farm plan.

The business grew, for the farmers were with me. Orders rolled in with a sweep from thousands of farms.

Today, in a little over seven years' direct selling, the Galloway Chain of Factories cover acres of ground, employing hundreds of men, turning out thousands of machines and implements and selling better goods direct to the farmers than I used to sell to dealers in carload lots for spot cash.

A Vast $3,000,000 Business

Over 125,000 satisfied customers last year bought $3,000,000 worth of goods from this company. And the business is growing by leaps and bounds.

Today farmers not only buy machines and implements from us, but come to us for their general merchandise as well—we save them money on furniture, incubators, roofing, clothing, sewing machines and practically everything for home, farm and personal use.

Our slogan, **"The Only Way Is the Galloway—from Factory to Farm"**—is endorsed by the great body of farmers everywhere, who know that the only safe, right and truly economical way is direct dealing with the concern that backs its goods with a $25,000 Cash Bond that is a legal guarantee of absolute satisfaction.

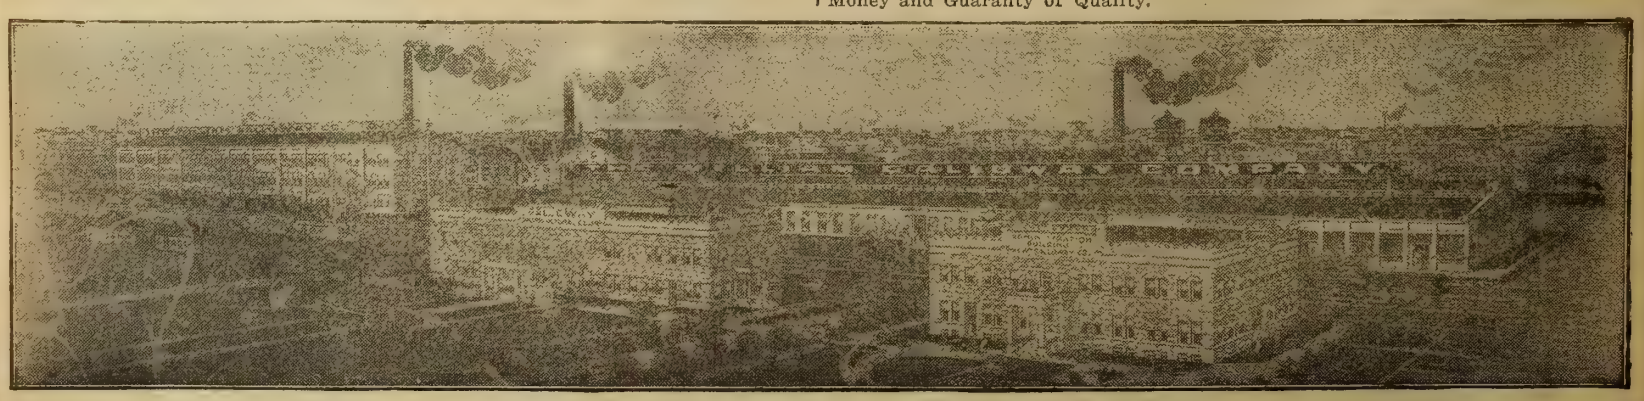
Galloway Co. is not owned, cotrolled or in any way dictated to by any Catalog House or Trust. (2) The crank shafts of all Galloway Engines are made from finest steel—never from cast iron. (3) All Galloway Engines, Manure Spreaders and Cream Separators are made in my own factories fro mhighest-grade materials by best skilled workmen and improved machinery. (4) The illustration below is a true picture of the Galloway factories, offices, Agricultural Club, etc. (5) The Wm. Galloway Co. carries out in good faith every offer made regarding Free Trial Tests; Refund of Money and Guaranty of Quality.



I WANT 1,000,000 FARMERS TO WRITE ME

Is *Your* Name On Galloway's List?

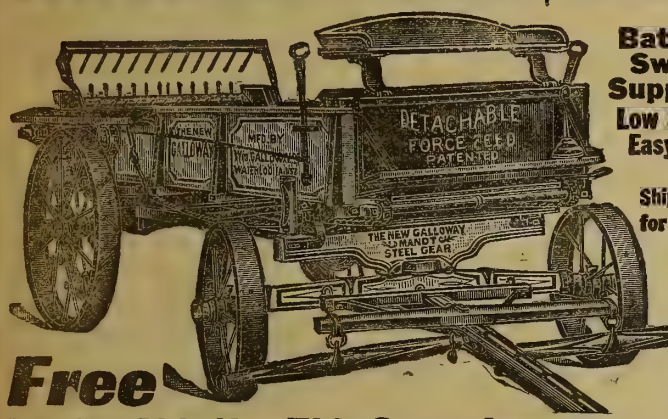
Have you ever written Bill Galloway? Do you know what it means to do business on my plan? If not, I want to know you as I know over 500,000 farmers who have either written or visited me here at Waterloo. This big, double page announcement is meant for you farmers who are holding back from Galloway—you who for any reason have never yet come up to the point of writing me. I ask you to do it now—a personal favor to me, if you want to put it that way. Is it asking too much? Will you oblige me?

In view of what I have tried to do for American farmers—the money, time and trouble I have actually saved them on my Direct-from-Factory-to-Farm-Plan—I ask you, as man to man, am I unreasonable in saying, "Write to me, or at least send me your name, so that I can write to you?"

You must have seen my announcements in the Farm Papers for many years past. Yet, no matter how much you have read about the Galloway Business, you will never really realize the truth about its wonderful benefits until you get the whole story—all the facts, figures, evidence and proof from customers, etc., that I will gladly send you—**FREE**—the very moment you say: "Galloway, do it."

No matter how you feel about me—no matter what your present needs may be—just let me send you my Special 1913 Offers, anyway. Look them over. Compare them with all others. Get posted. Be ready to save money when the time comes. Get my valuable free books—my Engine, Spreader and Separator Catalogs—the famous "Streak of Gold" book that has created the big sensation—"Evidence"—"Proof of the Pudding"—my new, fascinating "Cow Book"—any or all of the books shown below are yours—FREE—for the asking. Just check off the books you want and mail the FREE coupon NOW—at once.

Save $25.00 to $50.00 | **Save $21.25 to $45.00** | **Save $50 to $300.00**



Bath-in-Oil Swinging Supply Tank
Low Down and Easy to Turn

Shipped Anywhere for 90 Days' Trial

FREE for You to Test on Your Farm

Equal to Any Separator At Double the Price
Good for 15 Years of Steady Hard Service

1¾ to 15 H. P.

Free Let Me Ship You This Spreader Absolutely FREE—No Money Down—No, Not One Cent!

When I say "FREE" I mean it! This 1913 Galloway Spreader is so nearly 100% perfect that I am going to ship it right out without any strings to my offer. No money down—no bank deposit—no mortgage, lease, note or even a promise to buy it. Believe me, this is absolutely the limit—the lid's off—I challenge anyone to match this record-smashing spreader offer.

Test It FREE—at My Risk

I'll ship you the spreader absolutely free. Then you do this—with your money in your own pocket:

Test it out as you wouldn't think of testing any other spreader in the world. Pile on the manure a foot and a half above the box. Put on all she'll hold. Take the fine, powdered stuff or the toughest, heaviest, tramped-down, slough-hay kind from the calf yard. If it's frozen, so much the better. **Take it into your field, whip your team to a gallop and slam it in gear.** A test no other manufacturer dares even suggest to you. But do you think for a minute I'd ship you a spreader and let you abuse it that way if I didn't know it would make good?

11 Special Patented Features

40,000 farmers have proved the Galloway Spreader. They know that the 11 exclusive patented improvements make it the world's best; double drive chains furnishing power from both wheels alike direct to the beater and moving the load. The only endless apron force feed, roller bearing feed spreader built. Makes the Galloway worth $25.00 more than any other spreader sold today. Low down—easy to load—light draft—two horses will handle it easily. Pull between wheels entirely on the reach—and many other special features. I can't tell them all—get my catalog before you buy any other make or style of spreader.

"Streak of Gold"—FREE

The only book of its kind—chock-full from cover to cover with facts, figures, experience and valuable suggestions about fertilizing the soil, that every farmer should know. A book easily worth $100.00 to any business farmer. Tells how to handle manure, how to treat it, keep it and use it in a way to cash in fully on its wonderful value. Regular price of "A Streak of Gold" is $1.00. Free to you when you write for my Special 1913 Free Spreader Offer and Big Free Spreader Catalog. Write today!

The Galloway Bath-in-Oil Cream Separator Sets the Pace

I defy the world to match my Bath-in-Oil Separator for cleanliness, close skimming and easy running qualities. Here is the machine that has stood years of difficult tests—the separator that has been subjected to more severe and exacting tests than were ever asked of any other at any price. I tell you it's a sure winner—the best ever produced by human ingenuity. The more you learn about others, the more you will want the Galloway Bath-in-Oil.

Money Can't Buy Better

Pay twice my price if you will—you can't get more real, genuine separator value than this wonderful Galloway Bath-in-Oil gives you. Endless tests failed to detect enough butter-fat left in the "skim" to be put into figures. No machine at double the price will outlast the Galloway Bath-in-Oil. I know just how good it is, and I prove my faith in it by

My 90-Day Free Trial Offer

I will let the Galloway Bath-in-Oil speak for itself. For 90 days I will let one run on your place under the severest practical tests in competion with all others. This test is free—it will not cost you a penny—Galloway takes all possible risk. If you are not positively convinced that my machine sweeps away all competition on every point, return it to me and I will pay freight both ways. If you are enthusiastic in its praises—after 90 days' real test—say so and I will name you a price and liberal terms that will surprise and delight you. Don't fail to write me now for Catalog and Special Proposition. Do it t day—NOW!

Use My New Engine for 90 Days—FREE

I not only make the best engine, but I also make the best engine offer for 1913. You can have your pick out of my big Engine Catalog—any size from 1¾ to 15 H. P.—shipped right out to your farm ready to work; just set her up, turn on the gasolene and oil, throw on the switch, give the flywheel a turn and the **"Galloway"** is ready and eager to "show you" against any engine—at any price—on earth.

It Must Sell Itself

Galloway has only one Engine Salesman—the Engine itself. What it does for you on your farm is my only argument. Talk is cheap—big claims are easy—results alone count! Test the **"Galloway"**. Keep it working every day. Watch it carefully. Compare its power—reliability—simplicity—ease of operation—economy—with any other, and let the test be the proof. Try the Galloway Engine at my risk, 30-60-90 days, if necessary, to prove, then, if satisfied, keep it and I'll make you a special, low 1913 Factory-to-Farm price that will save you $50 to $300 real money. If my engine doesn't sell itself on this plan, just tell me, and I will take it back without a quibble or cross word, pay freight both ways—you'll not be out a penny, and you will actually have **one, two or three months' power FREE**—as a present from Galloway.

Make the Other Fellow Meet Me

Use your own common sense. Figure for your own pocketbook. If anybody offers to sell you an engine, ask him if he will meet Galloway's actual farm test. Make him say that he will run his engine against mine and let the best one win. If he won't do it, if he balks and wants to talk "hot air" instead of "cold facts," he's not the man to deal with, and you know it!

Free Special Service Bureau

Here's a big Galloway idea—something you need—something practical and valuable—and your'e welcome to it, FREE. My force of high salaried Engine Experts are at your command absolutely without charge. They will tell you how to select exactly the engine which is best suited for your particular purposes; how to test and judge an engine; how to use one to best advantage; how to fit up a power house—besides answering fully and completely any question about the care and operation ot an engine. This is absolutely free to you whether you buy a Galloway or not.

Get My 1913 Proposition

Send for my New Engine Book, Free Power Trial Test Offer and my new and original plan by which you can get your Galloway Engine either wholly or partly FREE. I'll explain this plan fully when you write me or mail FREE coupon below. Send it in today.

Galloway Says—Help Yourself—FREE!

A Big Thing on the Farm

Old Dutch Cleanser saves work and time on the farm in dozens of ways.

Aside from its many good uses in the home where it takes half the work from housekeeping, it is invaluable in quickly and hygienically cleaning the dairy pans and pails. In the barn, harness and carriage sides and tops clean easier and better. Everything that requires cleaning calls for Old Dutch Cleanser. Nothing else will do the work half so well.

Many uses and full directions on large Sifter Can — 10c.

Old Dutch Cleanser

4 BIG FASHION BOOKS FREE

WITH THE EDITOR.

If there is not enough to go around, it is so frequently the woman who does without.

Consider the farm home in the light of this statement.

When father thinks he should have a new seeder or an improved binder or one of half a dozen of the modern implements or machines which so greatly facilitate farm labor, he buys it.

Money to pay for it is gotten somehow. If there is no cash on hand, the money is borrowed, or stock is sold, or the future is mortgaged in some other way. The idea is that the implement is necessary.

Father's father sowed seed by hand and threshed the increase with a flail. Father would not dream of following in his father's footsteps; it can very easily be seen how foolish it would be to do so. He can invest his time and strength to better advantages, and he does so.

Meantime, what of mother?

Mother's mother washed with a board; rung clothes with her hands, and mixed bread with the same. She swept with a broom, chopped food and peeled apples with a knife.

Since mother's mother's day it has become possible to secure washing machines and wringers, carpet sweepers, food choppers, and a score of other labor-saving appliances and conveniences for the home, but mother has none of them!

Thanks to modern inventions, father's labors, heavy enough even now, are lightened in all sorts of ways; mother, however, toils on as if there were no labor savers, no kitchen conveniences on the market.

It is time that this matter received the thoughtful consideration of both the husband and the wife in the farm home. It is no doubt that sometimes it seems necessary that the work on the farm be facilitated at the expense of the home and the woman, but it is an open question if such a course is really necessary in the long run.

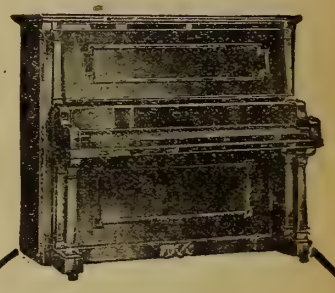
A loving woman in normal health is always willing to bear the heavy end of the load and to insist that she is able to do all sorts of tasks, but if her husband be wise he protects her from herself as far as possible. He reminds her that she cannot give healthy bodies to their children if she depletes her physical energies by overwork. He tells her that if she overdoes she will surely have to pay for it later in life. He tells her that labor savers cost less than doctors. He calls her attention to numbers of worn-out, sickly women among their neighbors, and points to the cemetery where others went before their time leaving children to grow up without the mother love and care which is their right.

Best of all this wise husband does such things as make his wife's household tasks as easy as circumstances permit. In such a home the water supply is carefully planned to save time and labor, the fuel is convenient, the wife neither coaxes for money nor hoards pennies to buy labor saving conveniences. All such things are purchased from the family purse or are love tokens from the husband who is anxious not alone that his wife's strength be conserved for the higher part of homemaking, but that she shall be reminded of his love and continued interest in her work.

Women do without labor savers when they should not for several reasons. Some women have a passion for self-sacrifice, and as long as there is anybody else needing anything they are quite content to do without. Some women live a day at a time, never dreaming that they are overdrawing their account, that if Nature's bills are not paid, compound interest is exacted in the shape of diseased bodies and nerves that make life a burden. Some women forget that their physical services are the smaller part of their duty to husband and children and that they should be so arranged that the duties of wife and mother on the spiritual plane are not interfered with.

All such women need to be reminded that they have also duties to themselves, that it is wrong for them to submit to working conditions which reduce them to a mere machine with no thought or care for the development of the spiritual, or which wreck them until they are bundles of disease and discontent.

Every soul, that of woman no less than man, should make growth and unfoldment the main object of living. When this thought is grasped,



One of Our 38 Styles

Rock-Bottom

Yes, Rock-Bottom Prices and on a Piano of the Highest Quality.

Your choice of 38 new styles of the **Superb Wing**—at rock-bottom prices—no money down—easy payments if you prefer not to pay cash—absolutely free trial—a four weeks' free trial in your own home.

It will be an ornament to any home. Given with a year subscription to People's Popular Monthly for only 30 cents. Our supply is limited. Order now. Dept. D.

People's Popular Monthly
Des Moines, Iowa

the day's work becomes a means not an end, and life is regulated accordingly. In this regulation things that save time, labor and strength should have a definite place.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

"We know not what duties are waiting
For hands that are willing and true;
We should ask but for strength to be faithful,
And do well what he gives us to do.

"And if he should bid us stand idle—
Just waiting—in weakness and pain,
We have only to trust and be faithful,
And sometime he'll make it all plain."

The pathway to success is in serving humanity. By no other means is it possible, and this truth is so plain and patent that even very simple folk recognize it.—The Fra.

"If I can scatter flowers along the path, or put touches of a rosy sunset into the life of any human being, if I can sow in any human heart the seeds that awaken desire for heavenly manna—by word or deed, sentiment or song—then I feel that I have walked with God."—Selected.

TEACHING THE CHILDREN.

As soon as the babies are old enough to learn anything, teach them to put the playthings in their places. Make them feel ashamed of leaving things for their mother to pick up. It will require patience, far more than to do it yourself and have done with it. The children will be heedless and careless and forgetful. Do not expect to succeed the first time, nor the hundred and first. But perseverance will conquer in the end; your child will acquire the habit of order and be the better equipped by so much for the battle of life.

HEALTH HINTS.

A disordered stomach can generally be put into pretty good working condition with a pint of hot water, taken just as hot as possible, sipping very slowly, before each meal and before going to bed at night. The habit should not be allowed to become a chronic one, however.

Moderation in eating is as important a factor toward good health as any one can mention, because just enough of the right sort of food is all that profits the body. Food over and above what the body needs putrefies and fills the stomach and intestines with gases.

If subject to cold feet, rub them thoroughly with something rough before going to bed. Strictly avoid anything heated—a soapstone, flatiron, etc.—for keeping the feet warm in bed. It makes them tender. Use instead knitted bed shoes or stockings, or use very large woolen socks or stockings. Hosiery of the usual size worn will impede circulation and the feet will remain cold.

A quick rubbing all over the body with a rough towel, a flesh brush or horsehair gloves is an excellent thing to do just before going to bed, as it quickens the circulation and often induces quiet sleep, but this should not be done in a room where the temperature is so low as to suddenly chill the body when the clothing is removed.—Exchange.

FOR THE COOK.

Fruit Cookies.—Beat to a cream one cupful of sugar and one-half cupful of shortening; add one-half cupful of sweet milk, one beaten egg, two and one-half cupfuls of flour and three level teaspoonfuls of baking powder. Filling: Three-fourths of a cupful of sugar, one cupful of boiling water, one cupful chopped raisins or figs. Cook until thick. Roll cookies very thin. Place teaspoonful of filling on, cut out cooky and place another on top. Press the edges lightly together. Bake quickly.

French Fried Potatoes.—In the home where a great many potatoes are used the family grows tired of the ordinary fried potatoes. If you try the French fried you will find them much superior to the ordinary fried ones. Take as long potatoes as possible, cut in long, square-sided cubes about the length of your finger or as long as the potatoes will admit. Have rather dry, drop in frying pan with rather deep fat. Salt, pepper and allow to brown on all sides. Lift with a wire spoon so as to leave the fat in pan. You will find these highly palatable and are not extravagant, as the fat can be used for other purposes. They take up very little of the fat. A small portion of butter will aid in the browning.

Filled or Stuffed Cabbage.—Cut the stalk off close to a large, firm head of cabbage, then slice off the crown neatly for a cap. Now dig out the center, first the stalk, then leaf by leaf, from the inside until the cavity is of the right size. Filling: Run through the food chopper a quarter of a pound of suet, four thick slices of stale bread previously soaked in water and three medium-sized onions. Add this to two pounds of finely chopped raw beef, two eggs, a teaspoonful of celery, and salt and pepper to taste. Work and stir well with the hand, using no spoon. Fill the cabbage with this mixture, tie up in a cloth closely fitted to the cabbage, and boil in plenty of water for two hours or more, according to the size of the cabbage. Put an old plate in the bottom of the pot to prevent the cloth from burning.

Sauce for Stuffed Cabbage.—One-half cupful each of melted butter and the water in which the cabbage was boiled. Season to taste with nutmeg. Boil up once and serve hot.

AMONG OURSELVES.

It seems suitable that at this time we should begin to think about the strawberry plot and the rest of the garden things we mean to set out in a very few weeks. For our most northern friends it may be somewhat early, but for our sisters of the south it will be not at all so.

So I present to you the articles on growing strawberries which were written some time ago for just this very occasion. Among the articles sent in were some by professionals. They clearly showed that the writers thoroughly understood their business, but it would scarcely be the right thing to admit these to our competition. With the permission of these writers, however, I hope to let you have the pleasure of reading one or two of them later.

Were I to judge by the letters I received, I would say that Kansas and Wisconsin were the states where farm women took the most interest in this delicious fruit. I have eaten Kansas strawberries with the dew on them, and I also know how sweet are Wisconsin's berries, but Missouri, at least in the Southwest, is a great strawberry country and I had hoped a prize winner would have appeared from there, but the choosing committee awarded two to Wisconsin and two to Kansas, and one to Iowa. Can you tell the north from the South and the middle from the extremes?

A STRAWBERRY BARREL.

A strong barrel—a burned-out oil or molasses barrel is best—that will stand the weather is the first need. Knock out the top and with an inch auger bore about six holes in the bottom. These are for drainage. Then, measuring to get the spaces regular, bore holes in rows circling the barrel and about six inches apart. Only the holes of every other line should fall directly under each other. There will be space for about six rows of ten or twelve holes each. The barrel should be set in a sunny place, having a few blocks under to assist drainage, and should stand exactly level so that the drainage may be straight down; otherwise the water will run out of the holes in the sides and waste the earth. Have some rich earth prepared, well mixed with rotted manure, as this serves to hold moisture for the plants. A good light soil, one that will not bake or pack, is best. Fill the barrel up to the first row of holes with earth. Then sprinkle the soil, from watering pot or hose, so that it settles well. Thrust the roots of the plants through the holes, packing the earth lightly about the roots on the inside. The crown of the plant should be in the mouth of the hole. Put in a new layer of earth and repeat. Be sure to sprinkle each layer of soil as it is put in. This is important. If the soil be sprinkled only after all the layers of earth are put on, the whole mass will settle and the roots be badly misplaced. We find the strawberry barrels fine. There are no weeds with which to contend. Frost on early blooms may easily be guarded against by covering. Drouth is no foe, since a bucket of water poured gently into the top of the barrel will nourish the whole crop. And, too, the berries can be picked without tiresome stooping.

A FAMILY PATCH.

I do think every farmer's family could have their strawberry patch and other small fruits, too. We set a new patch one year ago, rows four feet apart so they can be cultivated just like potatoes or truck, plants two feet in the row, and then we went through and picked off all blossoms and pinched off all runners till after the middle of July. A few years ago we set a patch of 300 plants bought from a nursery, the agent advising us as to the best varieties just for our own use. It lasted seven years, with two years of a more bounteous crop than we could use. We tried twice to reset plants from the old patch, but were not successful with them. Last spring we ordered our plants from a special strawberry grower in Michigan, ordering 350 plants of four different varieties. We received twenty-five extras of a new variety. We set out patch in five rows, seventy-five plants to the row, and about sixty rods from the house, out of reach, we hoped, of our Leghorn chickens, in ground used for potatoes and truck. After ordering plants the ground was manured and plowed; when we received them the ground was harrowed and plants set three or four inches deep, with the roots spread fan shaped. If the ground is in fine condition the only and best way is to set them by hand, pressing the soil firmly. We set ours in a shower and two weeks after not a plant had died, but as last season was very dry I noticed after every hoeing a few plants would dry up, the two outside rows having the most loss. Last fall the manure spreader was run over the patch again, and then a mulching of straw was put on them when the first good freeze came. This mulching is not taken off, but the plants are allowed to push their way through; then the berries will have this old straw to lay on and be nice and clean, while if no mulching is used, or if it is lifted off, the plants would start so early that sometimes the late spring frosts would catch the blossoms, or later on, after a rain, some berries would be buried in mud. And now for the work. When I asked the good man if I could have another strawberry patch he said, "Yes, if you will keep the weeds out of it," so I counted my working force, four boys, their papa and myself, all able to handle a hoe. With the cultivator going through the patch every time the potatoes and vegetable garden were plowed and hoeing between each plant following, we kept our patch in perfect con-

300 Main St. Cedar Falls, Iowa

dition till late summer. The crab grass had to be pulled out by hand, as it is such a persistent grower here, especially in our dry seasons. To be sure, the weeds will grow and have to be hoed and pulled out every season, but as the plants get more thick and shaded there will not be so many weeds. These plants will send out more runners this summer, filling up all the space between the rows, so this fall, after the middle of September, plants should be cut out in the old pathway. And now for the pay. For three weeks we had strawberries, not like we so often got from the market, but fresh and delicious. For a week we picked three and three and one-half gallons a day and this first year is only a sprinkling of what our patch will bear the next two or three years.

The boys said they would just unhitch their horses to graze on the road while they stopped at the patch to pick and eat their dinner, but that would not last long till they would be coming to the house to see if mother didn't have those two rounds or squares, three or four layers high, of short cake piled up there waiting to supply their wants, that most wonderfully prolific, ever-increasing product of the farm, the farmer boy's appetite.

CULTIVATING STRAWBERRIES.

As I have two fine strawberry beds of 1,000 Senator Dunlap plants apiece, I think my experience might help some new beginner. One bed is on timothy sod, heavily manured, the other on old ground with a very heavy dress of hog manure. Both were plowed in the spring and worked fine. One was set out about April 10th, the other May 20th, so I will say that they can be successfully raised where corn will grow and set at any time. I furnished plants for a bed last August that did fine. Mark the ground with a planter set about one foot apart. The important thing is to set "right." If plants are not trimmed when they come, trim all dead leaves and leave about two inches of the roots on. Make a small hole, spread root well in all directions, put in a little loose dirt, pour in a little water, let stand till settled, then fill up with dry dirt. Be very careful not to get any water on crown of plant, as it will die if you do. I don't think it necessary to water plants after setting if this is done. Cultivate with plow once a week till about August 1st, keep clean and free from weeds, train runners to a matted row as soon as they appear. A little loose dirt thrown on them will hold them in place. Cut off all bloom the first season. I never cover in the fall, but about April 15th mulch them with whatever I have, straw or wild hay, not too heavy, but enough to cover ground well. They will grow up through. The berries will always be clean, no matter how hard it rains; then, too, you can get down and pick them soon after a rain, as mulch soon dries. Mulch heavier in your pots between the rows, as it also helps to hold the moisture longer. I have always done this and always have berries when others fail. Winter mulching often smothers out plants. Nature's mulch is best, which is generally snow.

CAREFUL CULTURE.

When one considers the ease with which the strawberry may be grown, and the universal fondness for the fruit, the wonder is that more do not plant at least a small bed for home use. A few square feet of ground and a little time employed in cultivation will give to the farmer all the strawberries his family can use. I have grown the strawberry for many years, both here and in my former home, and have found that it succeeds in a great variety of soils. Any soil that will grow good crops of corn, potatoes or garden truck will grow strawberries. A deep, rich and moist soil suits the strawberry perfectly. The soil where I now live is a clay loam. When I set out a new strawberry bed I spread on a heavy coat of well-rotted stable manure and have the ground plowed deep as early in the spring as the ground can be worked. If the soil is not very rich, I spread on, after plowing, another coat of well-rotted manure and harrow until this is well incorporated with the soil, and the soil is in the finest possible condition. I then set out the plants in rows three feet apart and one foot apart in the rows. After planting I cultivate around the plants and between the rows often enough to keep the ground clean and mellow. In garden culture there is for this purpose nothing superior to a steel garden rake. With this one can go over a bed a rod square in less than fifteen minutes. As the runners appear I turn them along the row, where they take root, forming a matted row, and covering the ground all but about a foot space between the rows. After the ground is frozen in the fall I cover the plants lightly with cornstalks, leaves or litter that is free from weeds. In the spring, when growth commences, this covering is removed. As to varieties, I have grown in this locality with marked success the Warfield, Senator Dunlap, Cumberland, Bubach's No. 5 and Jessie. These are all desirable for the home garden and also fine for market. The Senator Dunlap and Warfield go well together and are my favorites. The berries are of superior quality and excellent for canning. The plants have the ability to succeed under all circumstances. As showing the wonderful productiveness of strawberries I may here state that I have grown on a bit of ground fourteen feet square 110 quarts of as fine berries as anyone ever saw. After the plowing or spading and harrowing is done I always plant and care for the strawberry bed myself. It is easy work and very profitable. Plants set out in the spring in rich ground, and the bed kept clean, will give the best crop that can possible be produced the following season.

STRAWBERRY GROWING.

Our strawberry bed has been such a source of profit and pleasure to us that I am always glad to say a good word for this most delicious of all fruits. I first started to grow strawberries in a small way and father plowed and harrowed the ground, which was of a rich, mellow loam, into prime condition. We made the rows about four feet apart so that they might be cultivated with a horse and we kept them absolutely clean. After the first year we allowed the rows to become matted, so when we picked our first crop, the second year, we had nice, clean berries. As to varieties, we had only a few plants to start with, but they proved to be good kinds and well suited to our locality. We had the Wilson, Warfield, Captain Jack, Crescent, Senator Dunlap and a few of a northern variety called the Blizzard Belt, which are fine. Our berries did well from the start and, besides being a great treat to us and our friends, I soon found I could make some money from them. I gradually enlarged the bed and tried to read and learn all I could. Each year I have tried to raise better berries than before. I have always found a ready market for

Tone

That's where the Victor-Victrola is pre-eminent

You might be able to build a cabinet that outwardly would resemble a Victor-Victrola. You might even copy the inside construction and details, if they were not protected by patents. But there is no copying the superior Victor-Victrola tone-quality.

That represents years of patient experiment—with various woods, with different proportions, with numerous vibratory surfaces—and it is simply astonishing how slight a variation in size, in shape, in position, seriously affects the pure tone quality.

No, the Victor-Victrola tone can't be equaled! Even though the eye could take in every detail of construction, there is still that same indescribable "something" which makes the Stradivarius supreme among violins, which gives to the Victor-Victrola the wonderfully sweet, clear and mellow tone that has established this instrument as pre-eminent in tone quality.

Hear the Victor-Victrola today at the nearest Victor dealer's—you'll spend a delightful half-hour and come away with a greater love for music and a more thorough appreciation of this superb instrument.

Write for the handsome Victor catalogs, showing the different styles of instruments and portraits of the world's greatest artists who make records only for the Victor.

Victor Talking Machine Co., 25th and Cooper Sts., Camden, N. J.
Berliner Gramophone Co., Montreal, Canadian Distributors.

Always use Victor Machines with Victor Records and Victor Needles—*the combination.* There is no other way to get the unequaled Victor tone.

hem, because I had first-class fruit and hey sold themselves. As to time and are, strawberries respond so readily to ood care that it pays to give them the ery best; and I believe I put no more are and labor upon each row of straw- erries than upon a row of onions. trawberry growing might be very prof- tably taken up by farm women and irls who want to earn a little extra oney. It is nice, first of all, to have hem on our own tables and preserve shelves and since nearly every one likes them one can find a ready sale for any surplus. Of course it takes a good deal of hard work, but we all know there is no reward without effort. Long live the strawberry!

ESSAY CONTEST NOTICE.

Suppose that, this time, we have a good discussion along the lines of modern methods of housekeeping with special reference to household conveniences and labor-saving appliances (homemade cones included). To encourage a flood of letters along this line, we will have a prize letter contest and the first prize will be a one-vessel fireless cooker; second, third, fourth and fifth $1 each. Tell us why you purchased certain articles; whether or not you found them come up to your expectations; or, tell us what you consider the most useful modern household appliances, giving reasons for your opinion. Make your article from 250 to 300 words and send it in on or before March 5th.

MONTGOMERY WARD & CO.

THE pinnacle of saving perfection is reached in the new book of a thousand pages issued by Montgomery Ward & Company.

It is the highest achievement in making this institution the real idea of a modern Bargaintown.

There are one hundred thousand "suggestions to save" in its pages.

In order to make it possible to present to you these bargains we are obliged to buy not only carloads of many items but in some cases the output of entire factories.

Multiply 100,000 items by the output of a factory on a single item and you will readily see why we can undersell almost every other merchant in the world and then make the very small reasonable profit that satisfies us.

Garth Jones, the wonderful English Artist, has tried with his gifted pen to convey to you this idea of "The Highest Peak in Bargaintown." But you can never really get what he means until you have seen the book on which the idea is based—the new 1913 catalogue of Montgomery Ward & Company.

Why not write now—it won't cost you a cent. We mail it free. All you need to say is "send on your catalogue without cost to me" and it will reach you without delay. Address Dept. P17.

MONTGOMERY WARD & COMPANY

A Nature Lover.

Although this is the last of January, this is the second "taste" of winter we have had. And is there anything so invigorating as a cold day? I live on a farm and to me there is no place like it. Perhaps you think I've never been to the city, that's why. No, I've been to the city several times, and like the country better every time. You are free to do as you like, sing and laugh as loud as you please, and "next door neighbor" will not tell you she has just put baby to sleep. Every day there are new and different things to be seen. Yesterday was a gray, solemn day, but as I stood on the river bank and watched the waves splashing around every log and snag (they seemed angry, in sympathy with the weather). I realize that nature put beauty in even the gray day. On the farm if you are kind, every animal is a friend. In my walk yesterday, I visited the calves, and do you know, they almost ran over me, so glad they seemed to be, but, of course, they know I sometimes have salt for them, and always rub their necks and heads. I sat on the fodder pile in their pen, and one actually kneeled in my lap. In the country, God's nature seems to inspire one to be good, while in the city, man-made theaters, public dance halls and saloons make one think "What's the use?" City cousins who read this, please do not censure me, as I certainly do not mean that all people living in the country are perfect as to morals, and that city people are all bad. No, surely there are more temptations to resist in the city, and those who do resist must be really good. Morning Glory gives us a pretty pen picture of what she does when it snows and sleets. Bedouin, Hiawatha, Blue Bell and all of you old writers and new ones, too, put on your wraps and take a long walk in this jolly, cold weather, and then write us what you have seen or done, I know it would interest others as well as me. Don't you think so, Aunt Mary? How many of you have an "Old Maid" for a chum? I have, and find she isn't like one at all. I must quit, and take another walk to the river and see what the waves say now.—Vashi.

MOTORS FOR SALE

A PROMINENT automobile manufacturing concern offers for sale, at a bargain, a few slightly used motors. These motors develop horsepower ranging from 34 to 50, and are all of the four cylinder type. They have been slightly used for testing purposes, but have since been overhauled and are at present in first-class running order. They are offered at very attractive figures and should give excellent satisfaction as a means for furnishing power for almost any purpose about the farm. If you are interested in obtaining an excellent power plant cheap for use about your place, we invite your correspondence. Address "R," care this paper.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5489 Lady's Six-Gored Skirt—In this model we have one of the new effects, using a pleated section as an insert at the lower part of the side seams. The panels are retained in front and back and there is no apparent widening of the skirt, although the pleats give greater ease of movement. Serge, cheviot or broadcloth can be used for this skirt.

The pattern, No. 5489, is cut in sizes 22 to 30 inches waist measure. Medium size requires 3⅛ yards of 44-inch material. Price of pattern, ten cents.

5978 Miss's Dress—This dress can be used for the small women as well as for the miss. It can be made with either the empire or regulation waist line. The skirt is a four-gored model. Serge, cheviot or pongee can be used to make this dress, with the collar of contrasting goods.

The pattern, No. 5978, is cut in sizes 14, 16 and 18 years. Medium size requires 4½ yards of 44-inch material, with ½ yard of 27-inch contrasting goods. Price of pattern, ten cents.

5888 Lady's Three-Gored Skirt—This garment is cut in three gores and closes at the front. It is one of the most attractive models of the season. Serge, mohair, pongee, linen, pique and other wash fabrics may be used.

The pattern, No. 5888, is cut in sizes 22 to 30 inches waist measure. Medium size requires 3⅜ yards of 36-inch material. Width of lower edge is 2¼ yards. Price of pattern, ten cents.

5722 Child's French Dress—A jaunty little French dress is illustrated in this design. It is a practical garment and one in the fashioning of which there is nothing puzzling for the home seamstress. Chambray, gingham, madras or French percale can be used and pretty relief is given by having the collar, cuffs and belt of contrasting goods.

The pattern, No. 5722, is cut in sizes 2 to 8 years. Medium size requires 3¾ yards of 27-inch material, 3 yards of goods 36 inches wide or 2½ yards of 44-inch fabric. Price of pattern, ten cents.

3760 Boy's Russian Suit—The Russian suit is always suitable for the small boy. The blouse of this suit closes at the right side of the front. The trousers are made without a fly and finished with leg bands or elastics. Serge or linen can be used to make this suit.

The pattern, No. 3760, is cut in sizes 2, 4 and 6 years. Medium size requires 2⅜ yards of 36-inch material. Price of pattern, ten cents.

5960 Lady's Apron—This pattern provides for both apron and dust cap. The apron can be made with or without sleeves. It is a becoming model as well as a practical one. Gingham, percale, chambray or lawn may be used for development and the same fabric is used to fashion the dust cap. The trimming is of contrasting material.

The pattern, No. 5960, is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 6¾ yards of 27 inches wide or 5 yards of 36-inch material for apron and cap, with ¾ of a yard of 27-inch contrasting goods. Price of pattern, ten cents.

MEN WANTED!

SOUND men 21 to 40 years old wanted at once for electric railway motormen and conductors in every state. Wages $60 to $100 a month. Experience unnecessary. Permanent employment, no strike. NEWS OF THE SALE RING

James Williams' Duroc Sale.

At the sale of Duroc Jerseys held by James Williams, at Marcus, Iowa, on Wednesday, January 22d, there was much in Mr. Williams' favor. Contrary to the usual rule of his sales he had a good day and a good attendance of buyers. The tops were not high, not extremes, nor did the low ones drop very badly. An average of $47.25 was secured on the entire offering. A feature was the sow, Miss Mortgage Lifter, and her litter of nine gilts by Model Chief VII. The ten head brought $507.50, a great example of what good a prolific brood sow in a herd can do. The gilts brought $437.50 and the sow $70. The top sow was No. 1, the Golden Model 2d sow, bred to Model Chief VII., which went to A. L. Neville, Aurelia, Iowa, at $85. Only five gilts, and they were late farrow or bred late, sold below $40, showing it to be an even sale. Col. F. F. Luther made it a snappy sale and the buyers from several states, as per the appended list, were right after the good stuff. The following is a list of those selling at $40 or more:

1. A. L. Neville, Aurelia, Iowa	$85
2. Peter Miller, Marcus, Iowa	51
3. Walter Rasmussen, Cherokee, Ia.	49
4. H. S. Fain, Emmetsburg, Iowa.	45
5. J. H. Willtse, Prosper, Minn.	80
6. A. A. Hoyle, Churdan, Iowa	43
7. Ed Rasmussen, Minden, Iowa	44
9. M. J. Quinn, Pomeroy, Iowa	45
10. A. Lentz & Son, Pierson, Iowa	40
11. Henry Holland, Kingsley, Iowa.	50
12. Joe Trienan, Remsen, Iowa	40
13. E. A. Springer, Cleghorn, Iowa.	42
14. Geo. Skeggs, Cleghorn, Iowa	42
15. Geo. Skeggs	41
17. Gearke Bros., Aurelia, Iowa	46
18. A. L. Neville	46
20. L. Essenich, Sioux City, Iowa.	53
21. Nick Hansen, Alton, Iowa	70
22. A. Lentz & Son	57
23. D. G. Mortz, Remsen, Iowa	50
24. John Hourscne, Remsen, Iowa	40
25. R. M. Miller, Prosper, Minn.	65
26. Frank Kritz, Remsen, Iowa	43
27. M. J. Quinn	40
28. John Hourscne	41
29. Joe Trienan	51

31. N. C. Molgaard, Alta, Iowa	41
33. John Sonsmann, Remsen, Iowa	48
34. W. H. Iosty, Centerville, S. D.	60
35. Joe Hendrickson, Marcus, Iowa.	43
36. R. A. Simons, Marcus, Iowa	43
37. J. H. Willtse	57
38. C. E. Walden, Washta, Iowa	41

Breeders' Combination Sale.

At Lincoln, Neb., on January 22 and 23, 1913, was held a combination sale of Percheron and Belgian stallions and mares. Thirteen head of stallions two years old and over sold for $8,185, with an average of $629.80. Eleven head of stallions one year old and under sold for $1,863.50, with an average of $169.41. Nineteen head of mares two years old and over sold for $8,042, with an average of $423.30, and nine mares one year old and under sold for $1,800, with an average of $200. Fifty-two head sold for $19,888.50, with an average of $382.47. Stallions were a little slow in selling, but the mares and young stuff sold readily and brought good prices. This being the first breeders' sale held in Lincoln, it was considered a splendid success.

Marshall's Poland China Sale.

G. F. Marshall, Monroe, Iowa, sold forty-nine head of Poland China sows on January 28th at an average price of $47.60 each. It was an even sale from start to finish, nothing going below $25, and with $120 top. The latter figure was paid by S. M. Reed, Monteith, Iowa, for Lady Giant, a last April yearling of more than ordinary merit. The sale was conducted by Col. W. B. Duncan and was entirely satisfactory to buyers and sellers. In addition to the forty-nine sows sold there was one last August boar by Giant King which sold at $45 to J. G. Gallman, Van Horne, Iowa. The list of animals sold at $35 or over is as follows:

Miss Expansion; Tom Kane, Fairmount, Iowa	$ 60.00
Lady Ex.; W. R. Marshall, Monroe, Iowa	90.00
Lady King 2d; Melvin Tool, Monroe, Iowa	55.00
Lady King; W. R. Marshall	90.00
Lady King 3d; A. D. Henry, Beacon, Iowa	62.50

markets of the country than any oth-

Smith's Duroc Sale.

J. E. Smith, Victor, Iowa, held a very successful sale of Duroc Jerseys at his farm on January 25th. The top of the sale was No. 22, a great fall yearling sow by Royal Col., selling to Walter Bowen at $80. The sale was a very even one and Mr. Smith received a lot of favorable comment regarding the uniformity and high quality of the class of sows he offered. This is Mr. Smith's eighth sale and each year he has made a marked improvement in his offering. Colonels Kraschel and McIlrath did excellent work as auctioneers. Those selling over $40 are listed below:

1. Walter Bowen, Garwin, Iowa	$60
2. Fred Gurne, Williamsburg, Ia.	50
3. Fred Gurne	45
4. John B. Gant, Delavan, Wis.	47
6. Walter Niswander, Brooklyn, Ia.	57
7. T. A. Coglen, North Liberty, Ia.	53

Healy's Short-horn Sale.

One of the successful Short-horn sales of the present season was held at Marshalltown, Iowa, on Tuesday, January 28th. There was a brisk demand for both the bulls and females and many of the younger calves were sold separately from their dams and are included in the average. Mr. Healy has been a successful breeder of Bates Short-horns and the offering, though not fat, was in condition to do the most good for the purchasers and was readily taken by breeders at the ringside. Royce & Burger, Shellsburg, Iowa, topped the bull offering and secured the three-year-old son of Earl of Barrington, 7th Duke of Wapsie, at $220. F. W. Guffy, Unionville, Mo., secured one of the bulls which Mr. Healy had used in his herd with much success, Earl of Barrington, at $200. Jas. Collins, Waukon, Ia., topped the female offering, securing the splendid roan heifer, 6th Oxford of Wapsie (Lot 22) at $220. John E. Smith, Laurel, Ia., secured a bargain in the three-year-old heifer, 16th Duchess of Wapsie, at $200. Col. Carey M. Jones sold the entire offering in his usual satisfactory manner. Animals selling for $100 or over are listed below:

17th Duchess of Wapsie, calved July, 1909; Jas. Collins, Waukon, Iowa	$195
Oxford Beauty, calved October, 1904; Arthur Pekers, Cedar Falls, Iowa	170
16th Duchess of Wapsie, calved June, 1909; John E. Smith, Laurel, Iowa	200
Grand Duchess, calved May, 1907; J. M. Ferguson, Marshalltown, Ia.	160
Grand Duchess 2d, calved April, 1908; W. E. Craig, Aurora, Ill.	145
11th Duchess of Wapsie, calved	

I will tell you how to become a prosperous Fruit Rancher in the San Joaquin Valley, California

I will show you how to go to work to get a home for yourself and those dependent upon you.

California is no lotus land, where men gain wealth and ease without effort. But its great central valley is blessed with a soil of wonderful fertility. The high Sierras furnish an abundance of water for irrigation. The climate is ideally arranged for the perfect ripening of a wide range of fruits, vegetables, grain crops, and live stock. The social organization effected by those now there makes it a splendid country in which to build a home and rear a family. It is a land blessed with tremendous natural advantages, and every ambitious, earnest, industrious man who goes, will find there the conditions necessary to insure a permanent success.

Fruit ranching is the way to the greatest ultimate profit. But the development of a good grove, orchard or vineyard takes time. So we say, go slow, even to those who are financially able to enter the business and carry it until the trees and vines have had time to come into bearing. Plant only a part of your land to trees, use the rest for quick-money crops. Plant to alfalfa and buy a few dairy cows. These, with a flock of chickens and turkeys, a few hogs and a garden, will meet the running expense until the fruit begins to come in. Then orchard or vineyard gradually may be enlarged until all the land is planted. The resulting profit is your absolute insurance against the future.

You will not have to undergo pioneer privations. The San Joaquin Valley is a finished country. The varieties of fruit best adapted to the several sections are known. Irrigation water is ready or economically may be developed. The fruit growers' exchanges and other marketing organizations have perfected a system of getting greatest returns for the grower. The state is spending millions of money on country roads. California's school system is superior to any in the country, and the state-wide library organization gives to all access to the great collection of books in the state library.

In a word, you will find here a splendid country for business, even a finer country for home-making, and the greatest country in the world for children.

I believe that every man who buys land in California to-day will find his place an asset of increasing value every year hereafter.

I am anxious to get into touch with men and women who are considering the West as a place to make a home. I know that the organization of which I am the head is in a position to be of great service to all, and I want you to feel at liberty to call upon me for any information about California that you may require. This service is free.

We have just published an illustrated folder describing the San Joaquin Valley. It's free. Read it.

Wright & Sons' Poland China Sale.

The sale of Poland Chinas held by W. M. Wright & Sons, Allen, Neb., at the farm on January 29th, was a very successful one. The crowd of breeders was not at all large, but the farmer buyers were strong competitors on all the sows entered. It speaks extremely well for Wright & Sons that the people in that section come back each year for the product of his herd and many of them speak in high terms of the money-making qualities of the hogs he produces. The day for the sale was ideal and the comfortable pavilion was well filled with a business crowd. The sale was good, as sales go, and was conducted in a businesslike manner by the auctioneer, Col. W. R. Ritchie. The top sow of the sale was Allen Maid, a litter sister to the great breeding boar, Wright's Big Bone, that heads the herd there. She sold to James Reed, Wakefield, Neb., at $101. An average of $53.72 was secured on the forty-four head. The following is a list of sales at $45 or over:

1. Clyde Mather, O'Neill, Neb... $ 72.00
2. Roy Hausserman, Wakefield, Neb. 77.50
3. James Reed, Wakefield, Neb. 101.00
4. L. S. Comstock, Allen, Neb. 80.00

Handley's Duroc Jersey Sale.

One of the best crowds of the year was present at the E. E. Handley Duroc Jersey sale at Carroll, Iowa, on January 29th, and fifty head made an average of $61.82. His offering was in nice condition and was appreciated by those present. No high prices prevailed, but it was an even run from beginning to end. Col. N. G. Kraschel did splendid work and the outcome was very satisfactory to Mr. Handley. Below we list those selling for $40 and above:

1. A. L. Neville, Aurelia, Iowa.... $88
2. I. H. Graham, Cherokee, Iowa... 70
3. F. A. Barr, Carroll, Iowa..... 55

Kissinger's Poland China Sale.

One of the most disagreeable days of January was the sort of weather handed out to G. A. Kissinger for his Poland China sale held at the farm near Milford, Neb., on January 30th. The exceptionally high wind and the biting cold kept many away from the sale. However, there was a fair outside attendance and about the same sort of local crowd. The average of $41.25 on the forty-one head sold must be considered a very satisfactory sale under these conditions. Col. H. C. Wickham conducted the sale and worked hard for the last dollar. All sales of $35 or more are listed below:

1. F. O. Cooper, Milford, Neb..... $68
2. Wm. Kuhlman, Milford, Neb..... 39
3. J. W. Pfander & Sons, Clarinda, Iowa 62
4. Seward County Farm, Seward, Neb. 50

B. J. Harding's Poland China Sale.

Another good crowd attended the R. J. Harding sale at Macedonia, Iowa, on February 3d, and he made an average of $81.50 on thirty-eight head. Nineteen sows bred to Col. Gano made an average of $114. The top of the sale was No. 13, a daughter of Chief's Protection, and she went to W. N. Shanks, Worthington, Minn., at $235. Colonels Reppert and Kraschel cried the sale, assisted by Colonel Putnam in the ring. Below we list those selling for $40 and over:

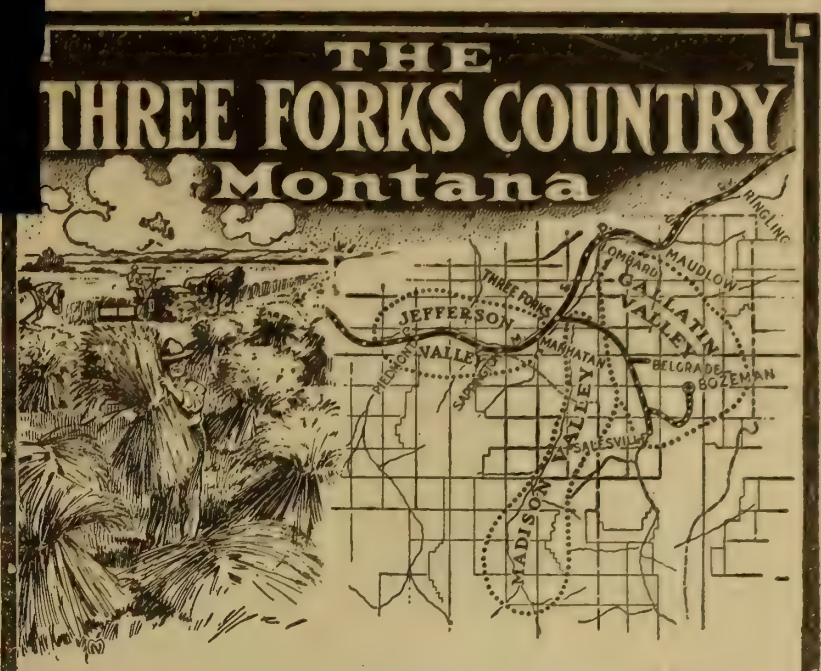
THE THREE FORKS COUNTRY Montana



The most remarkable agricultural section in Montana, comprised by three rich valleys—the Gallatin, Madison and Jefferson.

The climate is mild—air, clear and dry—water pure—surroundings beautiful—land prices low—making this district a most desirable place to locate.

The fertility of the soil and favorable climatic conditions account for the extraordinary yields of all grains, vegetables and small fruits.

At the recent New York Land Show the prize cups were awarded the Gallatin Valley for the best oats and barley grown in the United States.

This wonderful section of Montana was opened to the markets of the world by the new transcontinental line—the

-ACRE FARM in Southern Manitoba for rent or would sell at $35 per on crop payments. Good buildings, 400 acres r cultivation. Also 320-acre farm. Geo. E. athron, 123 Bannatyne Ave., Winnipeg, Man.

FLORIDA FARMERS

are NOW shipping fruits and vegetables and enjoying the most ideal outdoor life. What are you doing at this season of the year? The winter months are not the only profitable farming months in Florida, because we grow at least three crops a year on the same field—besides many varieties of summer fruits. Intensive cultivation on 20 acres in Florida pays a much bigger profit than the single crop on 160 acres in the North. Come, see and be convinced before buying. Our book, **"FACTS ABOUT FLORIDA,"** tells the truth. A postal card or letter will bring it to you. Address Dept. E,

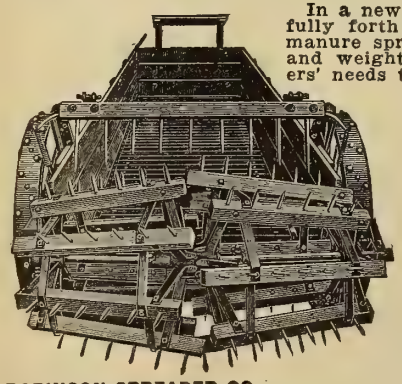
The Spreader That Spreads.



In a newspaper advertisement we cannot set fully forth the merits and advantages of this manure spreader. Its size and style and width and weight make it more suitable to the farmers' needs than any other on the market. It has a capacity of 60 cu. ft. It is low and easy to load, the front and hind wheels track with each other and track with a farm wagon. Being narrow, it is handy to drive into a barn and easy to back into a shed. Its weight is 1,420 lbs. and two good farm horses handle it easily under all ordinary conditions. Its operating parts are simple, strong and serviceable, guaranteed to do the work a manure spreader is intended to do. The sectional cylinder rotates outwardly and spreads to the width of the wheel tracks. It is an ideal spreader. Your implement dealer should handle it. Write for our latest folder describing it. Address

Wm. Retzlaff's Duroc Sale.

A very nice sale of Duroc Jerseys was held by Wm. Retzlaff, Bennet, Neb., on February 4th. There was only a fair attendance on account of the very stormy day, but the few breeders who were on hand and the farmer crowd was there to buy. A few small sows that really should not have been included cut the average very materially, yet an average of $40 per head was made. Col. W. I. Thompson did the selling in a very efficient manner. Those selling for $35 or more are listed:

Cooper's Poland China Sale.

W. H. Cooper, Hedrick, Iowa, held his annual bred sow sale at his Eastside Farm on February 4th and it was successful from every point of view. The buyers will make money on their purchases and Mr. Cooper made money on the offering at the prices received. The sale was very even, as the top was Price Maid, a great three-year-old sow, she selling for $150 to E. W. Kreischer. John I. Dripps secured three good sows in Nos. 3, 16 and 20 at $115, $102.50 and $100, respectively. The offering was good and suited the buyers. Col. W. B. Duncan did a creditable day's work in selling the sale and was assisted by Theo. Martin and C. C. Evans. A list of those selling at $50 and above is appended:

1. E. M. Kreischer, Mt. Vernon, Iowa.....$150.00
2. Mark Shaw, Monroe, Iowa..... 90.00
3. J. I. Dripps, Mt. Vernon, Ia.. 115.00
5. W. D. Ward, Bentonsport, Ia. 90.00

Brook and Wright's Hampshire Sale.

C. A. Brook and J. E. Wright, Washington, Iowa, held their first sale of Hampshires on February 5th and made one of the most successful sales of the season. These gentlemen had a high-class lot of Hampshires and the sows bred to Joe, Mr. Brook's International prize-winning boar, were in strong demand. J. Crouch & Son secured the top of the sale in No. 12 at $200. Breeders were present from several states and most of the hogs were bought by breeders from a distance. The average of this sale indicates a strong demand for good Hampshires and at the prices paid the purchasers will make plenty of money on their investment. Fred Reppert sold the offering in his usual satisfactory manner. A list of those selling is appended:

1. N. W. White, Bloomfield, Ia..$ 60.00
2. I. K. Beal..... 60.00
3. H. W. Rueppel, Dysart, Iowa 57.00

The Swan & Ellis Duroc Sale.

The first public sale of Duroc Jerseys ever made by Swan & Ellis was held at Indianola, Iowa, on February 8th and was well attended. They made an average of $46 on everything, the top being a Col. Gano gilt that went to John Krebs at $108. It was a good sale, considering that it was the first they ever made. Colonel Kraschel cried the sale, assisted by Colonels Allen and Putnam. We list those selling for $35 and above:

1.	W. U. Young, Rushville, Ill.	$ 92
2.	C. F. Weil, Prole, Iowa	46
3.	John Krebs, Riverside, Iowa	108
4.	Miles Harkins, Pleasantville, Ia.	70
5.	H. Gilbert, Perry, Iowa	78
6.	G. P. Maynard, Indianola, Iowa	45

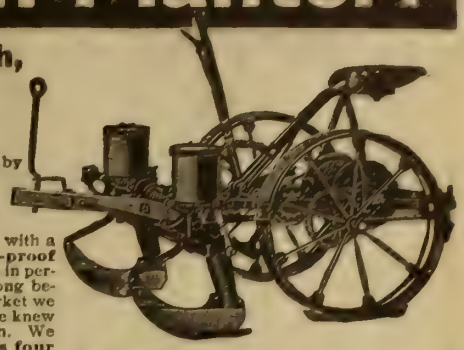
Gritters' Poland China Sale.

The following is a report handed us by E. Gritter, Hull, Iowa, of his sale of Poland China brood sows held on his farm January 22d. This was one of the good offerings that Mr. Gritters has made and that it was appreciated by the breeders of big-type Poland Chinas was shown by the large attendance from outside and the large number that were bought at good prices to be shipped away. The top of the sale was No. 12, which went to L. M. Neyens, Muscatine, Iowa, at $222.50. This gentleman also bought the herd boar, Big Surprise. The following is a list of sales at $50 and over: Bert Bouma, Hull, Iowa, No. 68, $60; C. F. Barrett, Doon, Iowa, No. 1, $146; Wm. Claerbout, Perkins, Iowa, No. 37, $66; John Dougherty, Rock Valley, Ia., No. 55, $75; John Den Beste, Maurice, Iowa, No. 39, $62.50; R. L. Doore, Dougherty, Iowa, No. 70, $82; T. A. Drake, Melvin, Ohio, No. 23, $77.50; H. E. DeVries, Hull, Iowa, No. 56, $60; No. 46, $60; Wm. Grooters, Boyden, Iowa, No. 49, $50; J. H. Jantzen, Hull, Iowa, No. 48, $80; No. 7, $82; T. H. Kirshinmann, Menno, S. D., No. 62, $100; H. T. Klitzke, Stewart, Minn., No. 26, $50; Henry Lauer, West Union, No. 21, $56; G. O. Moen, Leland, No. 58, $60; R. Mayhew, Sargent Bluffs, Iowa, No. 40, $76; L. M. Neyens, Muscatine, No. 60, $90; No. 59, $137.50; No. 12, $222.50; Ida Rogness, Hills, Minn., No. 67, $77.50; Arthur Rogness, Hills, Minn., $52.50; Wm. Smiley, Albana, Wis., No. 34, $62.50; Jas. Tancate, Edgerton, Minn., No. 64, $89; J. C. Thornburg, Greensburg, Ind., No. 42, $65; Harry Uitenbogaard, Archer, Iowa, No. 2, $100; No. 3, $85; W. F. Voris, Woodburn, Iowa, No. 5, $57.50; No. 13, $70; F. M. Zenor, Woolstock, Iowa, No. 10, $67.

Sixty-two head sold for an average of $62.25.

A Marvelous Corn Planter!

Put in Extra Kernels Where Soil Is Extra Rich, Thus Increasing Corn Crop Amazingly! No Stopping to Adjust Machine



Our patented Variable Device now makes it possible to **instantly** change the number of grains dropped. **No stopping or even slowing down!** Just shift a lever, **while riding**, and presto!—you plant as many grains to the hill as you choose.

Do you realize what this latest corn planter invention means?

It means that you can plant EACH HILL according to the richness of the soil. You can shoot in an extra kernel where soil is rich enough to make it grow. Where soil is thin or poor, you plant **less** grains to the hill and thus waste no seed corn.

Ten thousand farmers are already using this latest-model planter, some for the past three seasons. They say it's the most wonderful farm machine of the age. In all our 57 years' implement making we have never seen a more remarkable machine. It seems that this planter almost **thinks!**

From Edge to Flat Drop Without Emptying Hopper

And with the Rock Island No. 1 you don't even have to empty the hopper when changing from edge to flat drop or back again. Simply tilt hopper forward and slip in plates. You can do it in a moment. **We furnish all plates needed without extra charge.**

Straight Rows Regardless of Speed

No matter how fast or slow your team walks, or who drives—yourself, your hired man or your boy—**you'll always get straight, even rows.** Hills are in **perfect check.** All done by our patented Kick Back Valve.

Most Positive Clutch

Every Rock Island No. 1 is blessed with a **positive, yet absolutely trouble-proof** clutch. We spent thousands of dollars in perfecting the clutch feature **alone.** Long before this Planter was put on the market we **knew** we had a **positive** clutch. We knew we had a **TROUBLE-PROOF** clutch. We knew we had a clutch that **outwears four ordinary** clutches. The **principle** of our Clutch is fully pictured and described in the catalog we will send you.

Built for Hard Service

Every piece and part of this Planter is **built right**—built of **best** materials—built by **experts** of widest experience. Every little **detail** has been perfected. We use a special flexible connection to front frame to insure even depth in planting and to prevent possibility of breakage on rough ground. The width is adjustable. Seat is adjustable. Discs or runners, as wanted. 30 or 36-inch wheels, concave, flat or open.

Yet with all these improvements and perfections, with all this added quality, the price is very reasonable. The machine much more than earns its cost in one season.

Write! Send a postal today and you'll get by next mail our latest

Rock Island No. 1 Corn Planter

Corn Planter Book. And we will tell you where you can see the Rock Island No. 1 Planter. Then with your own knowledge and experience you can see why it's truly a **wonder** and a great **crop getter.**

Postal brings all information. Don't do a thing about buying any planter or even using your old one without learning all about the Rock Island No. 1.

FREE—We have just bought 6,000 additional copies of Professor Holden's famous book on corn growing. One copy is yours free if you write for it at once, and you should certainly know more about this planter. Write today.

ROCK ISLAND PLOW CO.

186A **Second Avenue** (121) **Rock Island, Ill.**

Rosenfeld's Poland China Sale.

As per advertisement in these columns Carl A. Rosenfeld held a public sale of Poland China hogs at Kelley, Iowa, February 3d. While Mr. Rosenfeld is new in the business of breeding Poland Chinas and practically unknown beyond his immediate neighborhood, he made such an excellent start with quality and size that his sale was a remarkable success. The entire offering sold at an average of $54.14. At the same time a number of Aberdeen Angus calves were sold and these also brought good figures. A list of the animals disposed of is as follows:

1.	Geo. Burkey, Sheldahl, Iowa	$ 70
2.	Frank Allen, Nevada, Iowa	55
3.	Joe Anderson, Sheldahl, Iowa	47
4.	Wm. Lentz, Ankeny, Iowa	59
5.	C. J. Biewin, Ames, Iowa	56
6.	O. C. Cramblit, Ames, Iowa	56
7.	Geo. Houge, Slater, Iowa	52
8.	M. J. Lundall, Boxholm, Iowa	48
9.	Geo. Houge	40

Angus heifer calf.	Harry Maxwell	100
Angus heifer calf.	W. L. Wiley, Madrid, Iowa	92
Angus heifer calf.	W. L. Wiley	81
Bull calf.	W. L. Wiley	90

The Poland China sows sold for $1,949, or an average of $54.14, and the Aberdeen Angus calves sold for an average of $97.60.

The Breeders' Horse Sale.

Total receipts of $115,378 was the result of the four days' sale of horses at Bloomington, Ill., January 28th to 31st, under the management of C. W. Hurt and the Breeders' Sale Company. A total of about 350 head were sold during the four days of the auction. The first three days were given over to the representatives of the different draft breeds, the Percherons largely predominating. The closing day the majority of the offering was trotting-bred and road horses and Shetland ponies. The attendance was good all through the sale and good prices were obtained for the right kind of horses, while the sub-standard sort sold for every dollar they were worth. Buyers were present from Illinois, Indiana, Ohio, Michigan, Pennsylvania, Wisconsin, Minnesota, Iowa, Missouri, Kansas, Colorado, South Dakota, North Dakota, Wyoming, Oregon and Washington.

J. Schmidt's Duroc Sale.

The sale of Duroc Jersey bred sows with which J. Schmidt, Everly, Iowa, wound up the circuit of sales of this breed in northern Iowa was the best one of the series. From the start the bidding was live and the men who were there realized the value of the sows that were up for sale. It was the first sale that Mr. Schmidt has ever held and the type of the sows and the shape that the whole offering was in showed him to be a good hog man and a breeder as well. The entire offering had about it the uniformity of type and size that marks good breeding and good management, and that the people who were at the sale appreciated this was shown by the amounts that they were willing to pay for them. The average of $50.90 was most encouraging and the evenness of the sale will show that there was but little difference in any of the hogs that were sold. The top of the sale on sows was $75, paid by C. Stephenson, Spirit Lake, Iowa, for the sow, Royal Luna 2d, a yearling by Royal Muncie and bred to the boar, Col. Tientsin. On gilts H. J. Luymes, Boyden, Iowa, topped the sale at $71 on a gilt by the same boar and bred to the big fall yearling, Col.'s Model by Col. Grant. The following is a list of the buyers of the hogs:

1.	Geo. Moeller, Everly, Iowa	$53
2.	H. H. Winterbore, Everly, Iowa	53
3.	Jacob Wunn, Everly, Iowa	70
4.	Thomas Peterson, Everly, Iowa	56
5.	Otto Klein, Alvord, Iowa	65
6.	C. Stephenson, Spirit Lake, Iowa	75
7.	Jacob Wunn	60
8.	T. E. Bly, Brewster, Minn.	61

SUMMARY.

40 head ——— $2,036; aver ——— $50.90

Fesenmeyer Averages $150.41.

One of the greatest Poland China sales of the year was made by Henry Fesenmeyer, Clarinda, Iowa, on February 6th, when he made an average of $150.40 on everything. The top sow of the sale was No. 3, a daughter of old Long King, bred to A Wonder, and she went to Stephen Brown at $280. The offering was good, the crowd was large and it was a great sale. Below we list those sold:

1.	Harry Nelson, Miami, Tex.	$252.50
2.	F. L. Rood, Clearfield, Iowa	175.00
3.	Stephen Brown, Shambaugh, Iowa	280.00
4.	J. A. Beaumaster, Elmo, Iowa	230.00
5.	J. B. Lawson, Clarinda, Iowa	180.00
6.	Ed Brinkhoff, Galva, Ill.	190.00
6½.	W. E. Zimmerman, Neola, Ia.	155.00
8.	Adam Ashbaker, Mt. Sterling, Ill.	135.00
9.	W. W. Carter, Jacksonville, Ill.	280.00
10.	A. Kuhl, Fifield, Iowa	200.00
11.	Pederson & Newcomb, Dunlap, Iowa	220.00
12.	Frank Roberts, Earlham, Iowa	175.00
13.	J. A. Beaumaster	180.00
14.	Frank Roberts	230.00
17.	E. E. Caverly, Toulon, Ill.	145.00
16.	C. M. Pederson, Dunlap, Iowa	127.50
15.	C. C. Wade, Perry, Ill.	142.50
18.	E. J. Ausperger, Pulaski, Iowa	110.00
19.	Frank Roberts	135.00
20.	Grant Jones, Davis City, Iowa	165.00
22.	Grant Jones	100.00
23.	E. S. Buffin, Leroy, Iowa	100.00
24.	W. W. Carter	190.00
25.	Frank Roberts	100.00
26.	Geo. Ruby, Lacey, Iowa	72.50
27.	Frank Roberts	140.00
30.	Allen Martin, Cooperstown, Ill.	100.00
31.	Joe Hemmy, Hill City, Kan.	97.50

39.	Lee Dearth, Onarga, Ill.	92.50
40.	H. F. Adams, Castle, Ill.	125.00
41.	O. B. Hensel, Eddestein, Ill.	105.00

Grant Lynn's Duroc Sale.

Grant Lynn's sale of Duroc Jersey bred sows, held at his farm north of Spirit Lake, Iowa, on February 5th, brought out a good attendance of breeders, but the cold weather must be blamed for the comparatively light attendance of farmers from the immediate vicinity. The sale was held in the new sale pavilion, which was reasonably well filled when Colonel Mossman opened the sale. There was hardly the spirited bidding that one would expect from the class of Durocs which Mr. Lynn is breeding. That he is making steady progress in breeding was shown by the quality of the herd boars exhibited and the fall pigs driven into the ring before the sale as well as by the good sort of brood sows that have been retained for service in the herd. Prices ruled quite even throughout the sale, with a

top of $80, a number of the best things going to prominent breeders from Iowa, Minnesota and South Dakota. The following is a list of the sales at $40 and over:

1. J. Schmidt, Everly, Iowa----$80.00
2. O. E. Reno, Terrill, Iowa---- 58.00
3. A. J. De Young, Sheldon, Ia-- 48.00
4. E. A. Thompson, Terril, Ia-- 61.00
5. Frank Kraeger, Terril, Iowa-- 51.00
6. W. W. White, Spirit Lake, Ia- 51.00
7. Peter Jacobs, Kanaranzi, Minn. 60.00
8. O. E. Smith, Spirit Lake, Iowa 61.00
9. C. Stephenson, Spirit Lake, Ia. 46.00
10. Guy Panburn, Spirit Lake, Ia- 48.00
12. I. F. Clark, Terrill, Iowa---- 41.00
13. T. E. Bly, Brewster, Minn--- 66.00
14. R. C. Veenker, George, Iowa-- 62.50
15. J. Schmidt ---------- 50.00
16. H. E. Huston, Iowa Falls, Ia-- 70.00
17. J. B. Thompson, Jackson, Minn. 64.00
22. J. H. Grady, Spirit Lake, Iowa 42.00
24. H. Arthur & Son, Spirit Lake, Iowa ---------- 42.00

Glasier's Second Poland Sale a Success.

The second sale of J. M. Glasier's Poland China bred sows, held this year at the fair grounds at Algona, Iowa, was very much of a success. The sale was snappy all through and the excellence of the offering is attested to by the fact that the forty head brought a total of $2,233, making an average of $55.82. The hogs went mostly to breeders from towns near Algona and in the northern part of the state. This herd will be missed from this section, as Mr. Glasier is moving to Minnesota, near St. James. The following is a list of the sales:

1. L. J. Allbright, Algona, Iowa----$73
2. E. S. Hays, Algona, Iowa---------- 70
3. C. E. Campbell, Algona, Iowa---- 64
4. Pat Durnin, Britt, Iowa---------- 51
5. M. W. Fandel, Whittemore, Iowa 66
6. J. F. McFadden, Britt, Iowa---- 67
7. E. S. Hays---------- 61
8. J. R. Ballard, Boone, Iowa------ 70
9. H. M. Steussy, Irvington, Iowa-- 60
10. C. C. Robinson, Algona, Iowa--- 76
11. L. R. Dutton, Algona, Iowa----- 67
12. F. L. Powell, Algona, Iowa----- 94
13. F. L. Powell---------- 67
14. R. O. Dryer, Lone Rock, Iowa--- 56
15. T. R. Cook, Algona, Iowa-------- 60
16. C. C. Robinson---------- 51
17. R. O. Dryer---------- 50
18. C. C. Robinson---------- 50
19. Emil Laabs, Lone Rock, Iowa--- 55
20. O. Radig, Lone Rock, Iowa------ 49
21. B. B. Hemstock, Nevada, Iowa--- 60
22. H. M. Steussy---------- 56
23. D. Fogarty, West Bend, Iowa---- 48
24. A. Radig---------- 43
26. T. M. & W. S. Billsborough, Fenton, Iowa ---------- 66
27. E. O. Sheets, Hutchins, Iowa---- 46
28. L. R. Dutton---------- 51
29. F. L. Powell---------- 50
30. H. Gettman, Ledyard, Iowa----- 49
31. H. M. Steussy---------- 50
34. J. H. Jensen, Fenton, Iowa------ 53
36. G. Lauster, Meservey, Iowa-----
40. R. L. Gilmore, Burt, Iowa-------- 55

Murray's Chester White Sale.

One of the greatest sales of Chester Whites ever made in the West was held by Chas. H. Murray, Friend, Neb., on February 7th. Buyers were present from all over Nebraska and many nearby states. The entire offering sold for an average of $49 per head and, while there were many bargains, yet it must be conceded a very nice sale. Mr. Murray has put forth a mighty effort to bring his herd up to the very highest possible point of excellence and we are glad to know that his efforts were appreciated. This was a great offering all the way through. Col. W. J. Thompson did the selling. Those selling for $40 or over are listed:

1. A. H. O'Neill, Ravenna, Neb----$100
2. Albert Lake, Hampton, Neb----- 64
3. Wm. Moody, Elwood, Neb------- 48
4. C. B. Thompson, Beatrice, Neb-- 50
6. Dean Dick, Valparaiso, Neb---- 41
7. Aug. Gesiking, Seward, Neb---- 65
8. Joe Davidson, Friend, Neb----- 42
9. C. H. Fleming, Kearney, Neb--- 42
12. Bert Cummins, Seward, Neb---- 40
13. Verne Ketchum, Shickley, Neb- 45
14. N. D. Mysenberg, David City, Neb. ---------- 49
16. W. R. Ransdell, Kearney, Neb-- 45
17. W. W. Spencer, Mankato, Kan-- 43
18. N. D. Mikenberg---------- 47
19. C. B. Thompson---------- 49
20. W. W. Spencer---------- 50
21. Albert Lake ---------- 40
22. John Simmons, Friend, Neb----- 50
23. John Edmunds, Princeton, Neb- 42
26. B. Frank, Elmwood, Neb-------- 48
27. Bert Cummins ---------- 55
30. Wm. Buehler, Sterling, Neb---- 49
31. E. Youngberg, Essex, Iowa------ 51
32. J. W. McNalley, Marcus, Iowa--- 40
33. N. D. Mysenberg ---------- 41
34. Jos. Treaher, Pauline, Neb------ 50
36. W. R. Ranswell ---------- 41
37. Henry Murr, Touganoxie, Kan-- 51
38. N. D. Mysenberg ---------- 58
39. Chas. W. Crosier, Juniata, Neb-- 91
40. N. D. Mysenberg ---------- 42

Veak's Duroc Jersey Sale.

The Duroc Jersey sale of C. E. Veak, at Essex, Iowa, February 4th, brought out a good crowd of breeders and farmers and he sold forty head at an average of $43. There were no high prices paid, but it was an even range of prices from beginning to end. Colonels Kraschel and Reppert cried the sale, assisted by H. S. Allen in the ring. Below we list those selling for $35 and above:

1. L. A. Mooney, Mazon, Ill-----$43.00
2. Wm. Walkinshaw, Griswold, Iowa ---------- 40.00
3. Frank Racine, Shenandoah, Ia. 41.00
7. Roy Shotwell, Shenandoah, Ia-- 50.00
8. Strong & Winn, Orient, Iowa-- 56.00
9. Waltemeyer Bros., Melbourne, Iowa ---------- 48.00
10. C. O. Peterson, Essex, Iowa--- 37.00
13. C. A. Smith, Shenandoah, Iowa 41.00
14. M. I. Mouser, Red Oak, Iowa-- 38.00
15. Wm. Walkinshaw ---------- 44.00
16. M. I. Mouser---------- 47.50
17. W. S. Crane & Son, Shenandoah, Iowa ---------- 62.00
18. Clyde Lingo, Essex, Iowa----- 41.00
19. Frank Racine ---------- 48.00
20. John Shoberg, Essex, Iowa---- 38.00
21. M. I. Mouser---------- 46.00
22. Bert McClintock, Essex, Iowa- 40.00
23. Sam Eakle, Prophetstown, Ill- 68.00
24. L. Seebloom, Essex, Iowa------ 50.00
25. C. A. Smith---------- 41.00
26. Wm. Walkinshaw ---------- 39.00
27. Joe Shoeberg ---------- 41.00
28. Day & Welsh, Villisca, Iowa--- 53.00
29. W. R. Crow, Hutchinson, Kan-- 70.00
31. A. O. Barker, Riverton, Iowa-- 43.00
32. E. L. Gudgell, Shenandoah, Ia- 43.00
35. M. I. Mouser---------- 38.00

Davis' Closing-Out Sale.

E. W. Davis, Glenwood, Mo., dispersed his herd of Duroc Jerseys at public auction on February 7th. Model Queen, the noted show and breeding sow, topped the sale at $325 to L. Koenig, Sullivan, Kan. J. T. Higgins secured the grand champion sow, Chief's Maid, at $175. Colonel Boyd got a great Ohio Chief sow in Ohio Queen at $185. Colonels Kraschel, Reppert and Allen sold the offering in a satisfactory manner. Those selling for $50 and above are listed below:

2. W. M. Putman, Tecumseh, Neb. ----------$142.50
4. L. Koenig, Sullivan, Kan------ 325.00
5. J. T. Higgins, Abilene, Kan-- 175.00
6. Colonel Boyd, Centralia, Mo- 185.00
7. Mr. Henningcamp, Hickman, Neb. ---------- 100.00
8. C. D. Caldwell, Milton, Iowa-- 55.00
9. Ed Friez, Nora Springs, Ia--- 127.50
10. A. White, Jr., Almira, Mo----- 82.50
12. W. A. Bell, Milton, Iowa------ 64.00
13. G. Henselly, Queen City, Mo- 72.00
17. E. C. Hastie, Kalona, Iowa--- 71.00
30. John Merritt, Milton, Iowa--- 50.00
32. A. S. Sneeden, Davis City, Ia. 52.00
37. A. S. Sneeden---------- 60.00
42. C. O. Anderson, Manhattan, Kan. ---------- 65.00
47. L. Koenig ---------- 60.00

The Fain-Dickey Duroc Jersey Sale.

The sale of Duroc Jersey bred sows that the above gentlemen held at Emmetsburg, Iowa, February 4th, was a well-attended event and was well conducted from the standpoint of rapid selling by the auctioneer in charge, Colonel Mossman. There were no sensational prices secured, but the average was pretty even all through the sale and the attendance of both breeders and farmers showed that the work these two breeders are doing is coming to be appreciated by those who are after the good things in this breed. Both Mr. Dickey and Mr. Fain put up a good class of sows and there were many good bargains sent through the ring on the day of this sale. The feature of the offering were the big-boned gilts by Col.'s King, owned by Mr. Dickey, and the Fain's Select gilts bred to the excellent young boar, Model Top Jr., consigned by Mr. Fain. His consignment averaged $51.80. The following is a list of those that sold for $40 or more:

DICKEY'S CONSIGNMENT.

1. Ed Burt, Whittemore, Iowa---$47.50
2. J. A. Henderson, Emmetsburg, Iowa ---------- 40.00
3. M. S. Maxon, Curley, Iowa--- 46.00
4. Walter Fox, Britt, Iowa------ 49.00
5. S. T. Scott, Emmetsburg, Iowa 43.00
6. Matt Gappa, Emmetsburg, Ia- 40.00
7. H. J. Sulley---------- 47.00

Weaver's Duroc Jersey Sale.

The sale of bred Duroc Jersey sows that was held by S. C. Weaver at his farm near Lake Park, Iowa, February 6th, was not as well attended as the class of the sows merited. They were thin in flesh, but there were some real bargains among them. The most of the sows went to local buyers, as would naturally be expected from a first sale, but there were several that were taken by breeders who had been attending the rest of this circuit of sales in the northern part of the state. The top of the sale was only $56, paid by Hinrichs Bros., Humboldt, Iowa, for the sow, Crimson Rose, a two year old bred to the big boar that the Mr. Weaver, of Weaver & Fountain, has had in his herd for the past two seasons. This boar is a good big one and his pigs should have sold for higher prices, but the crowd that day was not disposed to pay more than the lowest money. Mr. Weaver has retained a good lot of sows for his next season's crop of pigs and we predict that his offering next year will be one of the good ones of the year. The following is a list of the sows that sold, their prices and buyers:

1. J. Schmidt, Everly, Iowa-------$55
2. H. S. Fain, Emmetsburg, Iowa--- 50
3. H. H. Rowe, Lake Park, Iowa--- 31
4. Hinrichs Bros., Humboldt, Iowa-- 56
5. H. H. Rowe---------- 33
6. I. W. Spurgeon, Lake Park, Iowa 50
8. P. Peeper, Lake Park, Iowa----- 42

Kreischer's Poland China Sale.

E. W. Kreischer, Mt. Vernon, Iowa, held his second annual sale of Poland China sows on February 7th and it was very successful. It was a high-class offering, was the subject of much favorable comment among breeders present and the list of sales that follows will show that breeders appreciated the great lot of sows Mr. Kreischer offered in this sale. Colonels Cooper, Burge and Martin sold the offering and did excellent work. A list of sales follows:

1. John I. Dripps, Mt. Vernon, Iowa ----------$115.00
2. John Hynd, Moline, Ill------- 80.00
3. S. W. Wolf, Mt. Vernon, Iowa 95.00
4. J. M. Nesbit, Aledo, Ill------ 115.00
5. S. W. Wolf---------- 112.50
7. John I. Dripps---------- 100.00
8. A. A. Berry---------- 107.50
9. J. F. Miller, Tipton, Iowa---- 75.00
10. W. G. Bell, Nora Springs, Ia- 85.00

SAVE 25 TO 50% ON HARNESS $25.00 FREIGHT PREPAID

For $25.00 we offer our Leader No. 53—1½ inch Team Harness set down at your railroad station. This harness, designed and made for durability and service is the biggest bargain we have to offer. While the price is exceptionally low for a harness of this nature, quality has not been sacrificed on that account. But, "after quality, it's the price that counts." In the harness here illustrated only the very best grade of Oak Tanned Leather has been used in its manufacture and our money-back guarantee stands behind every sale.

We issue a 100-page, completely illustrated catalog, jammed full of just such bargains as shown in the illustration.

Just drop us a card and we will send you by return mail one of these handsome books. We manufacture all our own harness in our spacious factory at Waterloo. This alone accounts for the rock bottom prices we quote—no jobber, salesmen, agents or brokers to split up the profit—just the manufacturing cost with one small profit added. This accounts for the fact that we are absolutely the largest manufacturers of harness and leather goods, selling direct from factory to user.

A comparison of quality and prices will surprise you. Write today to

WESTERN HARNESS & SUPPLY CO., 613 Main Street, WATERLOO, IOWA

WEDDING BELLS!!

"Let Them Ring for You at Waterloo"

—GALLOWAY

This is an offer to any young couple who is contemplating marriage. If you will come to the Galloway Agricultural Club in Waterloo and have the knot tied here, I will pay for the license, furnish the minister, flowers, music and a fine wedding dinner—all free! And listen—I'll also give the bride and groom a handsome present.

Let Me Entertain You

I want Farmers and their Families to visit me here at Waterloo. Come on over while you've got time for a vacation. I'll take care of you—free—at our splendid $60,000 Agricultural Club, planned and built for my Farmer Friends. Plenty to eat, music, good company—everything to make you enjoy life while here. Last week over 600 Farmers visited my big chain of factories. Many of them bought Engines, Spreaders, Cream Separators, etc., at a big saving, direct at factory prices. No obligation to buy, though. Just come and spend a day or a week, if you like, as my guest. I'll give you the time of your life.

Special 5% Discount!

If you cut out this "Ad" and bring it with you, I will give you a special 5% discount on your purchases while here. This will help pay your railroad fare. And remember, your expenses are paid while in Waterloo.

If You Can't Make the Trip Right Now, Write Me When to Expect You

Legislation That Farmers Want.

A FEW weeks ago the Missouri State Board of Agriculture submitted the following question to more than 500 farmers, representing 114 counties in the state: "What new legislation along agricultural lines would you suggest, or what present laws, in which the farmer, dairyman, stockman and other country people are most interested, need to be amended or repealed?"

More than 400 replies were received. Road legislation comes in for the largest consideration. Of the 400 replies, eighty deal with this problem. This is three times as many as any other single subject. Evidently, if the farmers of Missouri have their way, there will be some changes in road legislation. The suggestions reflect in large measure the growth of the good road sentiment in the state. They are not complaints from chronic fault finders, but are, in the main, the opinions of men who actually want to see better roads. In many communities, the present road law, as carried out, seems to have been a failure. In other places excellent results have followed. Yet, strange to say, there are but few who have a good word for the law as it now stands. One opinion shared in by many is that farmers who keep the roads along their farms graded up should be allowed something for this work. It is also surprising to note how large a number inclined to the opinion that land owners should be required to keep the roadway along their places free of weeds and brush; some even go so far as to say that this particular piece of road should be worked by the land owner. Some of the replies as to the road law follow:

Marion County—"Divide the county into districts. Hire a gang of men for each district and keep them at work all year, unless it is a month in winter, and even then they might be needed to shovel snow." Clark—"Rebate to the farmer his poll tax if he will use four-inch wagon tires on the public roads." Wayne—"Make more money available for country roads and have it applied under contract just as the railroads do." Franklin—"Repeal the present road law that has the road overseer appointed by the county court." Pulaski—"Give us a county road law that can be enforced and which will do justice to the poor class of farmers as well as to the rich." Wayne—"I would suggest that a law be enacted taxing every acre of land, say from five to twenty cents per acre, for the purpose of good roads." Bates—"A good road law compelling farmers to keep up the ordinary dirt roads along their land would solve the good roads problem. We need an arrangement whereby counties under township organization can secure their share of the permanent road fund by doing the same thing other counties do." Greene—"Build more macadamized roads." Daviess—"We need any sort of a law that will improve the public highway, so as to bring about the consolidatiton of rural schools." Lincoln—"We should have township assessment and more revenue for road improvement." Perry—"We must understand that in order to have better roads we must put up more money." Cass—"Give us a road law for the counties under township organization so that the township can bond itself to build rock roads. We have itself to build rock roads. We have township organization, but under this system we get less work done every year.

That the farmer is beginning to study the market end of farming, as well as the increase in production, is shown by many replies touching this subject. A Livingston county correspondent writes: "Since the farmers grow all the products, they should control the selling price. Let every farmer pay one mill on the dollar valuation of his farm and personal property to start a sinking fund for the purpose of buying the products of the renting class of farmers. The products would then be stored in elevators until the proper time to sell them. This would result in a fair price for corn, hay, wheat and other farm crops, and it would be a price that could be depended upon from year to year."

The need of legislation preventing the manipulation of market prices is suggested from Franklin county. A McDonald county man writes: "We need some law to do away with the middleman, such as the commission man and the drummers, so the consumer can buy direct from the producer." "We don't need legislation. We need organization by the farmer and for the farmer, especially for the purpose of selling farm products, fixing a uniform price and taking that out of the hands of speculators," writes a southern Missouri farmer. The need of some legislation that will afford protection for the producer and give to him a larger per cent of what the consumer pays is voiced by many. It is suggested that no wholesaler, who compels the retailer to sell at a price fixed by the wholesaler, should be allowed to do business in the state.

Some system of legislation, such as the land loan plan, is urged from practically every part of the state. There seems to be a general belief that lower interest rates would help the farmer more than would any other one thing. It is believed that this would go a long way toward solving the problem of how to keep the young man on the farm. Some suggestions on this subject follow: Ozark county—"Give us a law that would prevent bankers and others from charging legal interest, which they are now indirectly doing by charging a per cent payable in advance." Holt—"Get some legislation that will let the farmer have cheaper money. He must have it if he makes farming profitable with the increased cost of the land." Nodaway—"We should have some law whereby the farmer who really desires it can borrow money from the government for the purpose of buying himself a farm. This would make of the farmers a people who live on and own their own homes instead of being a renting class, as is now the case in many communities." Marion—"We want cheaper money by a co-operative plan on farm land." Douglas—"We need a law forbidding bankers from charging 8 per cent interest, and in addition a commission."

There seems to be a growing demand for legislation to encourage the employment of county agricultural advisers. On the other hand, some are of the opinion that the present law under which Pettis and Cape Girardeau counties are now working is sufficient. Some replies on this subject are as follows: "Gentry—"I think it would be well to have a man in each county to instruct us farmers in our work, especially in orcharding." Dade—"We need a specialist in each county to advise with us as to the management of our farms and as to the disposition of our farm products." Clay—"We should have state aid for an agricultural expert in each county." Ralls—"If we had additional provisions made for an agricultural farm or an experiment station in each county it would do more for the farmers than anything I can think of." Clinton—"We want an expert in agriculture in each county and at the expense of the state." Johnson—"I think there should be some provision made for a county farm adviser in each county in the state, such as they have in Pettis county. Let's have some kind of a law to that effect."

That the rural school of today is not what the farmers want and that there is a real demand for something better is shown by many comments on this subject. Some replies are as follows: Pike—"We need a better school system, and must have it if farming succeeds in the long run." Saline—"The frequent changing of books and the quitting of children at the eighth grade are hard on poor country people." Atchison—"I would suggest that the school law be amended so that a child in the country could attend the nearest school, whether in the same district or not." Gentry—"The children in rural districts, when they have passed the eighth grade, must if they wish to take a higher course, go to some town or city school and there lose their desire for country life and often form bad habits. What we need is the centralized school or consolidation of districts. Then these children would have the chance of continuing their school work after passing the eighth grade and would remain at home instead of going away and becoming attached to city life." Macon—"It should be compulsory to instruct school children in the growing of farm products, the operation of farm machinery and the value of grain and forage as feeds. We need a general campaign for real country education." Osage—"We should have rural agricultural high schools and continuation schools in every township." Scotland—"One need is the immediate centralization of rural schools." Moniteau—"The distribution of public school moneys on the average attendance instead of local enumeration is wrong, as it gives the towns and cities an advantage over the rural districts. For this reason they would all show a greater attendance in proportion to enumeration."

WHOM ARE WE WORKING FOR?

Are we working our farms for self or for self and the boys?

Sometimes it seems as if many of our farmers carry on their farm operations solely with a view to making all they possibly can for themselves, forgetful of the fact that there will be men here tomorrow, men who will have to live on the farms they are robbing of their very best and who must somehow or other get their living out of that very soil.

Just now I am thinking of a man who says he is working his farm for all it is worth—to him—going on the plan that nobody will thank him if he keeps his soil fertility up by growing stock and plowing under costly clovers and other green crops. Men who rent and coming generations, anyway, will have to take care of themselves. He is in for what he can make now, today.

Another farmer comes to my mind while I write. This man says: Somebody will be here after I am gone. It may be my boys, it may be somebody else's boys. I claim to think well of my fellow men. I am trying to do what I can to make the world better. I do not believe I can do it anymore directly than to pass my farm on in the best possible shape. I can get all the money I need and still keep my land in good heart. Why should I care for more? I would just as soon give the man who comes after me a good farm as to let him have a few thousand dollars I have earned and taken from the soil and passed on to him."

That I consider the view of a real man, a man who is not so selfish that he cannot and will not recognize his obligation to the future. That man will be, he is, a real benefactor.

"But why should I work myself to death to keep up a little land for some man I never saw and care nothing about?"

No, don't do that. You need not; it would not be wise to do it. Just work on steadily, possessing your soul in patience, doing your work the best you can according to your strength and nobody could ask more of you. You will find your greatest happiness that way. The honest effort you put out will surely bring you all you want to make you comfortable and happy. You will live better and live longer than you would, if you made money getting the sole aim and object of your life.

Subscriber.

"Kuhn California Project"

In the Sacramento Valley

The canal, drainage and road construction completed, these lands are now being sold in small subdivisions. The soil, a deep alluvial silt loam, the best in the valley.

RAILROAD PASSES THROUGH THE LAND

Towns, Schools and Churches Near At Hand

CROPS—All kinds of fruits (including oranges and lemons); vegetables, seeds, berries, alfalfa, cattle, hogs and chickens.

WATER SUPPLY—Unlimited. Water delivered to boundary of every 40 acre tract. Canal and drainage system perfect.

FIELD NOTES.

W. W. Scholes, Onawa, Iowa, has Galloway bulls ten to twelve months old for sale. His advertisement appears in this issue.

Harry Hurless, Ogden, Iowa, offers some bred Chester White sows for sale at this time in his advertisement elsewhere in this issue.

Write E. H. Kahl, Buffalo Center, Ia., for his prices on the bred Chester White sows that he is offering in his advertisement in this issue.

In this issue U. G. Burton, Storm Lake, Iowa, starts his card announcing bred Duroc Jersey sows and gilts for sale. They are of good blood lines and are bred to a grandson of old Model Chief and to Lincoln Model 2d, the second-prize boar pig in the under six months' class at Sioux City last fall. Write for descriptions and prices on these. Address U. G. Burton, Storm Lake, Iowa.

In looking up a herd bull Short-horn breeders should remember the kind that J. C. Charlson, Leland, Iowa, is offering in his card in this issue.

Write to C. H. Porter, Eagle Grove, Iowa, for a list of the sows of his growthy Poland China breeding that he is advertising in this issue.

A. J. DeYoung, Sheldon, Iowa, has a few gilts left for those who may want something of the good kind that he handles. Write him for his prices.

The chances for buying the good sort of Clydesdale horses that James Pedley, Britt, Iowa, is advertising in this issue are not plentiful. Write him for his prices.

Ed Anderson, Alta, Iowa, can furnish some good Chester White bred sows to any who may want something of this kind this season. His card appears elsewhere.

Jacob Layland, Audubon, Iowa, has three French draft stallions that he is offering for sale to Homestead readers in an advertisement found elsewhere in this issue.

A. C. Orme, Nodaway, Iowa, advertises July and October Chester White boars for sale. He also has a few good gilts for sale. Write him for prices at once on these.

C. H. Drake, Hazleton, Iowa, makes an announcement in this issue of The Homestead that he must close out his entire herd of Short-horns. Read advertisement for more particulars.

Smith & Baumert, South English, Ia., have an imported Percheron stallion, six years old, and one home-bred four-year-old Percheron stallion for sale. Their advertisement appears in this issue.

J. C. Porter, Ogden, Iowa, always has some good Duroc Jerseys to sell and this year is no exception. Write him for his prices and get some descriptions of the sows that he is offering.

W. W. Neely, Greenfield, Iowa, is offering Partridge Wyandotte cockerels, Scotch Collie puppies and Mammoth Bronze turkey toms for sale in his advertisement in the poultry department of this paper.

V. W. Harris, Fairbury, Ill., directs attention in his advertisement elsewhere in this issue to the fact that he has a choice lot of imported Percheron stallions and mares in his barns and will make prices and terms satisfactory.

W. H. Barr, Villisca, Iowa, writing under recent date, says: "A field note in a recent issue of The Homestead sold the Polled Durham bulls which I had intended to sell at public sale. One of these went to John A. Patrick, Ute, Ia. My Poland China sows are in fine shape and prospects are good for a reasonable sale."

U. G. Davidson, Algona, Iowa, advises us that he has sold the two Duroc Jersey boars referred to in a late issue of this paper. One of these went to Myles Harkin, Pleasantville, Iowa, and the other to Wm. Runchey, West Bend, Iowa. The latter expects to fit his pig to show next fall and as he carries a good deal of Crimson Wonder blood he has an excellent chance of winning.

The advertisement of the Wragg Nursery Co. appears elsewhere. The catalog mentioned in the advertisement is a complete one describing many varieties of dependable apples, crab apples, pears, plums, cherries, peaches and a great number of small fruits and shrubberies. Wholesale prices are quoted in this book. Write for it to the Wragg Nursery Co., Des Moines, Iowa.

Farmers who contemplate a change of location in the spring will be interested in the advertisement of Hamilton & Crenshaw in this issue. These gentlemen have for sale good farm lands adapted to the production of wheat, clover, corn and blue grass. They sell this land at prices wich will make it profitable as an investment or as a permanent home. For further information address Hamilton & Crenshaw, Box 4, Fulton, Mo.

Farmers who want to buy the right kind of farm fences at the right price cannot go far wrong in selecting that made by the Coiled Spring Fence Co. and advertised elsewhere. This fence is strong and durable. It is made in varieties suitable for farm lawn or poultry yard. It is fully described in a catalog. Special prices also may be obtained by readers of this paper by writing for them to the Coiled Spring Fence Co., Winchester, Ind.

The interior construction of the De Laval cream separator is fully illustrated in the engraving to be found in the advertisement elsewhere in this paper. This engraving shows in particular the perfection of the oiling system and everybody knows that the manner in which any machine is oiled is one which has everything to do with its long life and effective work. Other facts concerning this separator may be learned from the De Laval dairy handbook. Obtain a copy of this by writing to the De Laval Separator Co., Chicago, Ill.

As will be noted in our list of dates claimed for live stock sales, J. A. Shade, Kingsley, Iowa, will put forward an offering of Hereford cattle on March 6th. His consignment will include fifty head. Mr. Shade advises us that this will be a Hereford show all of his own and that the twenty-five bulls will be the best he ever saw go into one sale. Two of them are eighteen months old and over. The remainder are from twelve to fourteen months. Each one is good enough in individuality and breeding to head the best herds of the breed. Fifteen head of cows will sell with calf at foot. Ten two-year-old heifers are also an extraordinarily good lot. Catalogs of this sale may be obtained by writing to J. A. Shade, Kingsley, Iowa.

On Saturday, February 15th, at Atlantic, Iowa, C. W. Humerick will make his annual public sale of fifty head of Poland China bred sows, and he has an offering that the breeders will all like. He is selling daughters of New Tecumseh, Big Jericho, Iowa Model, Smooth Wonder 2d, King Wonder, Victor Hadley and Big Buddy. The sale will be held right in town. M. T. White will represent The Homestead at the sale.

T. A. Gough, Bristow, Iowa, is advertising Scotch Collies for sale in his advertisement elsewhere. He writes: "The parents of the puppies I am offering for sale are from the best kennel of Collies that can be found. I paid as high as $50 for one of them. The pups will make great workers and I will guarantee them to give good satisfaction. I will furnish pedigrees with each pup eligible for registry in the American Kennel Club."

The advertisement of the Rockford Silverware Company appears in this issue. Some handsome new designs in tableware have been presented. These are the outcome of forty years' experience in the manufacture of silverware. Farmers will find that in the matter of knives, forks and spoons this ware is much better than is ordinarily purchased. It is handsomely illustrated and described in booklet "Exclusive Silverware." This book may be had free of cost by writing to the Rockford Silver Plate Co., 100 Wyman St., Rockford, Ill.

Breeders of Poland China hogs and, in fact, all live stock men will learn with regret that W. Z. Swallow, the veteran Poland China breeder, has been compelled by reason of ill health and the recent death of his wife to give up the business of swine raising. On March 6th he will make a public sale to include all his farm stock and fifty or sixty head of pure-bred Poland China hogs, with cattle, horses and other property. Additional facts will be given with reference to this sale in later issues of this paper. Any further information may be learned by writing to W. Z. Swallow, Waukee, Iowa.

H. J. Hess, the well-known breeder of Aberdeen Angus cattle and Shropshire sheep, Waterloo, Iowa, advises our readers in an advertisement elsewhere in this issue that he has now for sale a number of high-class bulls ranging in age from twelve to eighteen months. These bulls are of the popular Blackbird, Erica and Pride families and they possess the breed character and individual merit which have been the means of establishing the reputation of Mr. Hess as an unusually good breeder. No buyer need be disappointed in these animals. Reasonable prices will be quoted. Address inquiries to H. J. Hess, Waterloo, Iowa.

On March 21st, R. P. Clark, Brayton, Iowa, will make a public sale of about fifty head of Hereford cattle, including about twenty bulls. Among the latter will be Gay Donald 12th, a four-year-old son of Beau of Shadeland 31st and out of a dam by the 2,800-pound bull, Monarch of Shadeland 3d. Many of the young bulls and heifers will be sired by him and all the cows are in calf to him or will have calves at foot by him. Mr. Clark's sale follows the A. F. Hager sale at Avoca the day before and parties can come direct to his place. Drop Mr. Clark a postal and have him place your name on his list for a catalog.

In an advertisement elsewhere in this issue M. C. Cramer & Son, Monroe, Ia., state that they have for sale large-sized, growthy Duroc Jersey gilts. These are by Grand View Col. and their dams carried the blood of Golden Model and Model Keep On. They have been bred to Chief's Model 2d for March farrow. These gentlemen have also for sale August and September pigs by Cramer's Col. and Wonder's Crimson. Cramer & Son have for many years maintained a Duroc Jersey herd of more than ordinary excellence and the animals they now offer for sale are of the same desirable merit. See advertisement and for prices or additional descriptions write to M. C. Cramer & Son, Monroe, Iowa.

Strawberry planting time is now not far distant and those of our readers who are planning to plant strawberries this season should begin to investigate the merits of different varieties before ordering plants. J. L. Todd & Co. make a wonderfully liberal offer of 200 choice plants for $1; 100 of these are a new variety called Senator Dunlap, and the other 100 is made up of two separate and popular sorts. On orders of this sort a book of instructions is sent which gives complete information with respect to planting and care. The senior member of this firm is a strawberry specialist who has spent many years in this line of work and who has thousands of pleased customers all over the West. Send orders to J. L. Todd & Co., Route 3, Des Moines, Ia.

Henry Moll, Garner, Iowa, has a little announcement in this issue that must interest those who want to buy thoroughbred stock. The gentleman offers for sale one red roan yearling Scotch Short-horn bull, one eight-months-old Percheron filly of excellent breeding, one coming three-year-old bay French colt stallion and six very choice big-type Poland China gilts. The Short-horn bull is the son of Roan Lad 338981 and his dam traces to Imp. Butterfly 43d. The Percheron filly is by an imported sire, but three removals from Brilliant 3d, and the dam is also from imported stock. She is the making of a big and good animal. The Poland China gilts are sired by Black Victor, he the son of Lonergan's Black Victor. They are big, thrifty and in excellent condition, although not fat. They have been bred for May farrow. For additional information and prices write to Henry Moll, Garner, Iowa.

One of the classiest little books gotten out by any seed company is that which reaches us from the office of the G. D. Sutton Co., having places of business at Mason City and Geneseo, Ill. The Sutton book deals with corn alone. It describes the better varieties of corn that are best adapted to the conditions of our readers, and illustrates methods of harvesting, drying and sorting preparatory to shipment. The book contains also a large number of testimonials from patrons of the firm who have been pleased with their purchase. Copies of the book may be obtained without cost by writing the G. D. Sutton Co., Mason City or Geneseo, Ill.

Imported Belgian Mares.

Elsewhere in this issue Ed Boll, Jr., Scribner, Iowa, is offering a splendid lot of young Belgian stallions and some very high-class imported and home-bred Belgian mares for sale. He has a splendid span of mares that are great bargains to any man who wants Belgians.

McClarnon's Night Sale.

One of the attractive Poland China sales to be held this winter will be that of L. R. McClarnon at Braddyville, Ia., on the night of February 26th, a special train being ready to take them from the Pfander sale down to Braddyville. This is going to be some sale and will be an interesting sale to attend. Watch next week's issue for further particulars of the McClarnon sale and in the meantime write for a catalog and kindly mention this paper.

Fox Terrier Pups.

N. R. Rogers, Peru, Neb., one of the best known stockmen of the state, is offering for quick sale a number of extra choice fox terrier puppies. They are from the very best of breeding and the parent stock is great rat stock. Those of our readers who are bothered with rats will do well to order one of these puppies. They are priced well worth the money and one of these dogs will easily save their cost in a short time on the average farm. Mention this paper and address as above. See advertisement elsewhere in this issue.

Banks' Short-horn and Poland China Sale.

On February 18th, A. J. Banks, Montour, Iowa, will sell a high-class lot of Short-horn cattle and Poland China hogs at auction. In this offering Mr. Banks is listing some Short-horns and Poland Chinas that he would be glad to retain in his herd, but he wants to put in some attractions and is selling these good ones in order to induce the better breeders to attend this sale. The advertisement appears elsewhere in this issue.

The Frank White Holstein Sale.

Frank White, Hampton, Iowa, will hold his second annual sale of registered Holstein-Friesian cattle on February 19th and 20th, at which time he will sell 125 head of extra good cows and heifers. It will pay anyone interested in this great dairy breed of cattle to attend this sale, as some very attractive animals have been listed. A number of show cows and heifers will be sold and a large number of the offering descend from animals with extraordinary records as producers of milk and butter. Write for a catalog, mentioning The Homestead.

Galbraith & Son's Horse is Denver Champion.

At the recent Western Live Stock Show in Denver, Colo., the Clydesdale stallion, Royal Voucher, owned and exhibited by A. Galbraith & Son, De Kalb, Ill., won the championship of the show over all Clydesdales and Shires. This is good evidence of the class of horses handled by this well-known firm. They buy only the very best, their many years of experience making them especially well qualified to secure the class of horses best needed for the wants of the American farmers, and buyers will always find a desirable lot in their barns. See their advertisement elsewhere in this issue.

Trotter's Jack and Jennet Sale.

Those of our readers who want to buy a good jack or some choice jennets will be interested in the sale of W. T. Trotter at Mt. Ayr, Iowa, on February 27th. He is selling fifteen of the best jacks that have even been sold in the state of Iowa, together with fifteen choice jennets. He is selling one of the best mule jacks that has ever been used in the West. There are several others that are right up to this fellow. Mr. Trotter is regarded as being one of the best jack breeders today in the West and he is selling a great lot of jacks and jennets in this sale. Remember the sale will be held at Mt. Ayr, Iowa, on February 27th. When writing for catalog kindly mention The Homestead.

Choice Short-horn Bulls.

One of the best opportunities of the season presented the readers of The Homestead to secure Short-horn bulls of high quality is now made by L. Chestnut & Sons, Geneva, Neb. They are offering a number of young bulls, ready for hard service, and they are certainly an exceptional lot. They are all the get of the great young breeding bull, Royal Sovereign, a son of the great Golden Sovereign. We wish to say that Royal Sovereign is one of the very best Short-horn bulls in use in Nebraska today. He is big and smooth, nicely filled in all parts, being especially good over the crops and loin and well filled in the round. He certainly carries a wealth of flesh and comes of one of the best milking families of the Scotch cattle. Chestnut & Sons have always maintained an excellent herd of choice, beefy cows that were heavy milkers. They try to breed the real farmers' Short-horn and we must say that but few breeders breed as closely to the line. All the beef possible to obtain with great milk production is their aim. Those of our readers looking for this class of cattle will do well to write Chestnut & Sons at once. The bulls for sale constitute a

very choice offering and we know they the prices as low as such cattle should sell. Mention The Homestead when you write. See advertisement elsewhere.

Strawberry Planters, Take Notice.

In the recent fire which destroyed a large part of The Homestead printing plant the thirty-two-page catalog of J. L. Todd & Co., the strawberry growers, was destroyed. This has necessitated a delay in issuing the catalog and all patrons are requested to hold their orders until they can secure one of these handsome catalogs, which will be off the presses in ten days or two weeks and well worth waiting for. Send us your name and we will see that you get a catalog just as soon as they are printed. In the meantime we are still offering 200 choice strawberry plants for only $1, together with a book of instructions on how to plant and grow small fruits. Send in your orders and your requests for catalogs at once. Address J. L. Todd & Co., Des Moines, Iowa, R. 3.

Bred Sows for Sale.

Those of our readers who are wanting to buy some good sows at private treaty should write or go and see Wigstone Bros., Stanton, Iowa. They are offering a splendid lot of Poland China bred sows bred to their 1,057-pound boar, Chief Price Again 2d. One of these is a daughter of old A Wonder, a June yearling and a very fine sow. They also have a litter of fall sows by W.'s Wonder that will weigh 500 pounds or better and they are grand good sows. A January gilt by Big Jones 3d, out of Giantess B., is another good thing. In fact, they have a lot of good sows and it will pay Homestead readers to write these gentlemen or go and see these sows. Kindly mention The Homestead when corresponding with them.

The Marshalltown Percheron Sale.

H. C. Lowrey, Nevada, Iowa, and R. C. Dannen, Marshalltown, Iowa, will hold a combination sale of Percheron stallions and mares in Harmon's sale barn, Marshalltown, Iowa, on March 6th. Fifty head of high-class Percherons will be offered, thirty-eight of which are mares. The twelve stallions are all imported, with one exception, and were selected with the same care that these gentlemen would use in selecting a stallion for their own use. The mares are a high-class lot, nearly all imported, and their pedigrees have been inspected and passed on by the French and American governments. Part of the offering was shown in 1912 at Des Moines, Sioux City, Hamline and Huron and were good winners at those shows. The four-year-old stallion, Jambameau 82337 (83856), was a first-prize winner at the state fair of Minnesota, 1912. The offering is young, clean and in nice condition. Write these gentlemen for a catalog, mentioning The Homestead, and make your arrangements to attend the sale. The advertisement appears elsewhere in this issue of The Homestead.

The Berry Seed Book.

This office is just in receipt of the eighteenth annual catalog and seed book of the A. A. Berry Seed Co. This is a book which, while it contains practically all information and descriptions of farm and garden seeds that anyone may require, gives that information in a condensed form that makes it easily found and gives important facts only. The illustrations which it contains are just as instructive as the reading matter. There are two pictures of seed corn, one showing corn which has been graded and which has all the promise that any seed could have, while the other shows defective grains that should not be planted and that are a dead loss for their planter. For eighteen years A. A. Berry has been catering to the wants of the western farmers and gardeners. He has built up a business by use of the utmost caution in the selection of seeds and infinite care in getting them to the user in a vital condition. Farm seeds are also fully illustrated and described in the catalog. This department is an attractive one, containing as it does all the old-fashioned, hardy varieties, together with such newer ones as have proved their merit. This catalog may be obtained free of cost by writing to A. A. Berry Seed Co., Clarinda, Iowa. See the advertisement elsewhere.

Shrader & Co.'s Sow Sale.

On February 25th, at their farm between Stuart and Greenfield, Iowa, W M. Shrader & Co. will make a public sale of twenty-five head of Poland Chinas, including their herd boars and all their brood sows. In the herd boar line is that noted sire, Choice Look, one of the best of all the big-type breeding boars. Choice Look has bred some splendid things, both in the boar and sow line. He is the sire of the boar that topped the Mart Sheehan sale two years ago and he is the sire of the Sid Reed boar that was one of the most conspicuous winners at the Iowa State Fair last fall. This boar, Choice Look, is one of the best breeding big-type boars in the state and he will be sold for the high dollar in this sale. The young boar they are using is also a good one and they call him Big Improver. He is a son of Big Victor's Improver, out of Fancy Pride by Hadley's Expansion. He was one of the highest priced and best pigs sold last fall and he has an outcome to him. Most of the sows that will be in the sale will be sired by Choice Look and there are some wonderfully good ones. No. 1 of catalog is a daughter of Choice Look, out of the noted old sow, Lady Blackbird, and she is just an outstanding good sow and few can show a better one. They are selling three yearling sows that are out of the ordinary and these are Black Giantess 1st, Black Giantess 2d and Black Giantess 3d. These are out of Black Giantess and for length, depth and general all-around usefulness these sows are hard to beat. Lady Tecumseh is another good yearling sow. Sunflower Pride is a granddaughter of Big Tom and she will sell with a litter of nine pigs by her side sired by I Am Big Too. Also her fall litter of five boars and one gilt sired by I Am Big Too. There will be three good fall sows sired by Long Price, he by Guy's Price 2d, out of the famous old sow, Mayflower 4th. No. 2, a Choice Look yearling. He also one of the choice things in the sale. There will not be an old, worn-out sow in the sale. Old Choice Look weighed 920 pounds in just fair flesh, so you can get an idea of what the old boar is like. Write W. M. Shrader & Co., Stuart, Iowa, for catalog and kindly mention The Homestead. M. T. White will represent this paper at the sale.

Holst's Chester White Sale.

On February 27th, at Denison, Iowa, John F. Holst, Jr., will make his annual public sale of forty head of Chester White sows and he has selected the tops of his herd to go into this sale. Included will be nineteen head of yearling sows and three of these will be tried sows. There will also be four matured sows and the remainder will be his choicest spring gilts. Among the good matured sows he is selling is one daughter of Perry, a grandson of old Combination; another by Buster, also a Combination boar, and another by Young America, he by the great Teddy R. The latter sow is called May and she was bred by J. L. Barber and she is bred to Fancy Boy, a boar bred by L. C. Reese, and he in turn is a son of that noted boar, Keep On. The nineteen yearlings that he is selling in this sale are nearly all sired by this boar, Fancy Boy, and he has proven one of the best breeders he has ever used in his herd. The twenty gilts that he is selling are sired by Fancy Boy and Combination 3d and the entire offering is bred to Fancy Boy, Combination 3d and a boar called Ike. Mr. Holst has done a splendid business and a satisfactory business and his customers have all been satisfied. He has listed a splendid lot of good sows for the occasion and Chester White breeders will be interested in his sale. Write for a copy of his catalog and kindly mention The Homestead. C. C. Carlin will be the selling Blackbird of Arndale, one of his foundation Blackbird cows, and she is the dam of a great many of the Blackbirds he will offer. This cow was the dam of the top of his sale five years ago at $575, and she is the dam of eight head in this sale. Among these are some very excellent Blackbirds of the kind that the breeders all want. She is safe in calf again to Black Star 2d for an April calf. He is selling a nicely bred Blackcap in this sale and she should be a good attraction also. He will also offer some good Trojan Ericas as well as some of the other representative tribes. There will be about ten or twelve young bulls in the sale. Write J. V. Arney, Leon, Iowa, for a copy of his catalog and kindly mention The Homestead.

Prize-Winning Scotch Collies.

A great many stockmen will say that they do not care whether or not a dog is of prize-winning blood, so long as he will do good work about the farm or ranch. The writer agrees with them, but the fact is that the greatest per cent of the best workers are from the best winning blood. They have been bred for work, have had that tendency developed to a greater degree than the hogs of plainer breeding, and for that very reason are more valuable. When it comes to selling some stock it is also of importance that they be of some family that is known for some reason, and it looks to the writer like a good male or a pair of females from well-known breeding, breeding where the highest kind of intelligence has been developed, would be the right sort of stuff to buy and the price should be only a secondary consideration. A. A. Martin & Son, R. F. D. 4, Box 107, Lincoln, Neb., have some of that sort to offer. A great deal of the stuff is sired by the great breeding and show dog, Buckler by Glencroft Buckler by Southport Student. The dam of Buckler is

NEXT WEEK'S SALE PROGRAM

Monday, February 17	Duroc Jerseys, Bob Ewing, New Hampshire, Ohio.
Tuesday, February 18	Duroc Jerseys, Geo. Briggs & Sons, Clay Center, Neb. Duroc Jerseys, Chas. F. Sprague, Lima, Ohio. Chester Whites, Barr & Rae, Ames, Iowa. Short-horns, Barr & Rae, Ames, Iowa. Poland Chinas, James Cockerton, Whiting, Iowa. Poland Chinas, G. J. Bloemendaal and Korver Bros Alton, Iowa.
Wednesday, February 19	Poland Chinas, C. C. Polly, Whiting, Iowa. Holstein-Friesians, Frank White, Hampton, Iowa. Duroc Jerseys, S. J. Miller, Lima, Ohio. Duroc Jerseys, Dr. Herr, Lima, Ohio. Poland Chinas, Peter Mouw, Orange City, Iowa. Duroc Jerseys, Gilbert Van Patten & Son, Sutton, Neb.
Thursday, February, 20	Percherons, Percy Baird, Sec., Lincoln, Neb. Poland Chinas, Ruebel Bros., Marathon, Iowa. Duroc Jerseys, J. W. Storm, Seville, Ohio. Holstein-Friesians, Frank White, Hampton, Iowa.
Friday, February, 21	Short-horns, Fred Schaefer & Son, Estherville, Iowa. Duroc Jerseys, Geo. Davis & Son, Milford, Neb. Duroc Jerseys, E. C. Stemen & Son, Middle Point, Ohio. Poland Chinas, Orville O. Jones, York, Neb. Poland Chinas, W. J. Crow, Webb, Iowa. Poland Chinas, R. W. Halford, Manning, Iowa.
Saturday, February, 22	Poland Chinas, James Lawler, Clare, Iowa. Duroc Jerseys, Menaugh Bros., Gardner, Ill.

field man for The Homestead and bids sent to him will be properly cared for.

Arney's Angus Sale.

On February 27th, J. V. Arney will make a public sale of Aberdeen Angus cattle at Leon, Iowa, at which time he will offer some of the best bred Angus cattle that have gone through a sale in a long while. Mr. Arney is one of the most representative and best known young Angus breeders in the state and he has made an enviable reputation as a breeder of high-class show and breeding cattle. He will sell about thirty-five or forty head in this sale, among which will be ten young bulls. There will be ten choice Blackbirds in his offering, a number of Trojan Ericas, K. Prides, Prides of Aberdeen and Queen Mothers. Included will be daughters of such noted sires as Imp. Earl Eric of Ballindalloch, Imp. Black Jester of Ballindalloch, Imp. Proteros, Baltimore of Glendale and his own great breeding bull, Black Star 2d. It will be remembered that the most of his show cattle that he has been producing the last two or three years have been sired by Black Star 2d, and he must therefore be regarded as not only one of the best breeding bulls today in the West, but he is an individual that any breeder could be proud of. We think he is looking better than we have ever seen him before and he has certainly sired some good things for Mr. Arney, both in males and females. All the cows and heifers not related will be in calf to Black Star 2d, and therefore will be choice things to buy. Mr. Coldwell, Burlington Junction, thought enough of this bull to buy his splendid young son, Ebony of E. 3d, a Trojan Erica that he expects to show next fall and he is one of the very promising young bulls that will be fitted for the fall shows. One of the best young cows he is selling is Katrino of A., a K. Pride that was never lower than fourth except at the International. She is safe in calf to Ebony of E. 3d and she is just one of the very choice things that will be sold in any sale this year. He is Glencroft Trixie by the well-known Dashaway. The dams of the young stuff for sale are mostly strong in the blood of Parbold Piccalo by Anfield Model. This last named dog is one of the most noted of the breed. These dogs are all for sale at prices usually asked for the ordinary sort. For full particulars address as above at once and kindly mention The Homestead when you write.

Polly's Sow Sale.

February 19th, at Whiting, Iowa, is the day that C. C. Polly is going to interest the big-type breeders with one of the best offerings of Poland China sows he has ever listed for a public sale. In last week's issue we spoke of Lakeside Wonder at some length, because we had considered him one of the greatest young boars in western Iowa, and there are a whole lot of people who think as we do about this boar. There will be twenty daughters of Lakeside Wonder in the sale and some of the sows will be bred to him. We spoke of the Expansion sow last week that he intended to sell, but he has left her out and he will offer instead Big Queen by old Sioux Chief and she goes in bred to Lakeside Wonder for an early litter. She is one of the best individuals he is offering and she is capable of weighing 700 pounds. He has also added to his last week's list three daughters of Pawnee Expansion, he by Dorr's Expansion, out of Royal Dude-bred dams, and these are bred to Lakeside Chief, he by Lakeside Wonder. These are splendid gilts of the Henry Dorr type and they are individually good enough to go into any herd. The Lakeside Wonder gilts are certainly a splendid lot, both from an individual standpoint, and also carry the best of big-type blood lines. Just a word about Marvel Chief, the boar that some of these sows are bred to. He was fourth in the under-year class at the Nebraska State Fair last fall in a class of twenty-nine shown. He was also first, champion and grand champion over all breeds at the Gage County Fair following the state fair at Lincoln. His sire, Norval Chief, and his dam, Bright Light, were also well-known winners at the Nebraska, Kansas, Missouri and other state fairs, and consequently this boar has a right to be good. The Polly offering is a good one and deserves the support of every breeder and farmer who is going to want some good Poland China bred sows. Write for his catalog and mention The Homestead. M. T. White will represent this paper at the sale.

The Lincoln Horse Sale—Last Call.

In making the last call for the sale of Percheron and Belgian horses that will be made by the Nuckolls County Horse Breeders' Association at Lincoln, Neb., on February 20th, we think we are calling attention to one of the really great draft horse sales of the season. This sale will contain a great lot of big, sound brood mares, all of nice ages and all old enough to breed will be bred to stallions of known breeding value. Some of the very best young mares that the writer has seen in a long time will go in this sale. This is not an offering of old, worn-out stuff or of dealers' horses, but instead it is an offering of strictly choice stuff drawn from some of the best breeders' studs in Nebraska. This is a class of stuff that it pleases the writer to recommend to the buying public. We feel confident that they are the profitable kind to buy. We would be pleased to see a good attendance at this sale and believe they will be well repaid for their coming. Plan to be on hand. Lincoln is easy of access and the very best of hotel service may be had. There is still time to get the catalog if you act at once. Mention The Homestead when you write.

Paul's Percheron Place.

Paul's Percheron Place, Washington, Iowa, as the name indicates, is the Percheron farm owned by George H. Paul, a well-known business man of that place. Mr. Paul has an excellent farm nicely equipped to handle horses adjoining the city limits. It has been the ambition of the owner to get a collection of Percherons that would be the equal of any on the American continent. In 1911 he commissioned his efficient manager, A. R. Smith, to visit France and purchase the best stallion obtainable, as well as some of the very best mares to be found. Mr. Smith purchased Joblot (84016) 82288, a dark gray stallion that is almost faultless. He weighs over 2,100 pounds as a three year old and has the clean limbs and heavy bone that breeders like. He is a full-made, well-proportioned horse that has the look of an impressive sire. Mr. Paul raised fifteen colts this year that are with one exception sired by Fricoteur (63402) 52012, an eight-year-old dapple gray stallion that is still in service. These colts are an extra large, good-boned lot and are excellent proof of the superior ability of Fricoteur to sire good ones. Twenty-seven mares on the farm are safe in foal to these two gray stallions and any of them are for sale. They also have some yearling and two-year-old stallions that are the right sort and will be priced worth the money. This collection of sixty-five imported and home-bred Percherons are worth looking over, as it is rarely you see so many good ones on one farm. See advertisement elsewhere and write for any information you want, mentioning The Homestead.

Peter Mouw's Annual Sow Sale.

This week we give the last call for the sale of Peter Mouw, Orange City, Iowa, on February 19th. This famous breeder is selling an unusually good lot of tried sows and yearlings, also including a few spring gilts that are of the same sort and with the same prospects of growing into the sizable sows that the older ones are now. It is unnecessary to call attention to the work of this breeder, who for so long stood alone in the production of this type that is considered to have regenerated the breed, and to the fact that in this herd is the very foundation of the big-type hog, now so universally prevalent in this breed. Mr. Mouw certainly gets size on the product of his herd and he has a good eye for the individuals that have good build. The class of the sale offering that he is selling this year will be all the proof of that statement that any one will need. In the cataloged list are several sows that are smooth enough and well enough proportioned to make show sows, in fact, they are show types right today. No. 1 of this sale is one of that sort and No. 3 also. The breeding of both the famous Big Jumbo and the boar, Long Orange, now in service here, has produced sows that possess all the qualities that have made the Mouw Polands famous wherever they have gone. There is a pleasant surprise in store for the breeders of Poland Chinas who may be at the sale, for the sows are extra good. In support of the class of the sale stuff it is superfluous to call attention to the great number of good herd boars that are now in service in so many of the leading herds of the whole country that have been bred on this farm, or from hogs that have come from here. And while breeders are there on the farm they will have a chance to see why the hogs that go out from Mr. Mouw's place are of such wonderful size. Just go out in the lot where he keeps the sows that he is going to raise next spring's crop of pigs from, and in the size they have now, and the uniformity of the type they show, will be seen the cause of big pigs and the reason for big litters. The fact that the major part of the offering is of yearlings and matured sows, the sort that are always the best kind of mothers, makes the purchase of a sow from this sale the safest forecast of good litters well raised and therefore the surest method of infusing a goodly amount of this prepotent line of blood into any herd. Getting such blood at its very source also has advantages that are not to be forgotten. There will be fifty head of the sows in the sale and it will be held in the spacious new pavilion that made such favorable comment a year ago, just after it had been erected. If you are not able to attend the sale Ray

L. Gribben, Homestead representative, will insure you honorable treatment in the handling of your bids. Write today for the catalog, mentioning The Homestead. Address Peter Mouw, Orange City, Iowa. See advertisement elsewhere in this paper.

Manager J. G. Truman, of the Pioneer Stud Farm, Bushnell, Ill., writes: "We had the pleasure of a visit from John F. Maynes, Pottawattamie county, Iowa, last week. He has been looking for a strictly high-class Percheron stallion for some time. He finally selected the gray colt, Karvi, champion at the Minnesota State Fair last fall, beating at that fair the champion Percheron stallion of the Iowa State Fair. The breeders and farmers of Pottawattamie county are to be congratulated upon having a horse of this high character in their midst. Our regular January importation of Shire and Percheron horses is about ready to leave Europe and will include some of the best specimens possible to procure in England or France. Our 1913 catalog is now ready for distribution to any of your readers who are interested in high-class horses." See advertisement elsewhere in this paper.

Williams & Sons' Poland China Sale.

On February 13th, at Villisca, Iowa, L. B. Williams & Sons will hold their annual Poland China bred sow sale and they will sell forty head. They have selected six of their best tried sows, four fall sows and the remainder will be spring gilts. The spring gilts will be litter sisters to the boars they sold in their fall sale and two or three of these are full sisters to the boar that sold for $100 in that sale. This is one of the oldest firms breeding Poland Chinas in the state and they are offering some very choice sows in this sale. Remember their sale will be held at Villisca, Iowa, on February 13th, and their catalog is now ready for distribution. When writing for it kindly mention The Homestead.

Scott's Mammoth Jacks.

G. M. Scott, Rea, Mo., proprietor of the Quiet Glen Stock Farm, has in his barns this year a class of Mammoth jacks that should please the more critical buyer. Mr. Scott says he believes he has more big, heavy-boned jacks than have ever been in the Quiet Glen barns at any one time before and all who have visited there know that some great jacks have been owned there since the establishing of this jack farm somewhere near seventy years ago. Mr. Scott has been breeding jacks since 1866 and is known as a conservative and safe gentleman to do business with. He invites inspection of his stock and says he is in position to make even better prices than usual. Note his advertisement and when writing or visiting him kindly mention The Homestead.

Dunhams' Percherons.

In their advertisement in this issue the old, established Oaklawn importing and breeding establishment of the Dunhams, at Wayne, Ill., call attention to the fact that at this time, their forty-seventh year of continuous business, they are better prepared than ever to care for the wants of those in the market for high-class Percherons. The late M. W. Dunham established Oaklawn on a high plane and those who have succeeded him in its management have always endeavored to live up to his high-class methods of doing business and present a class of horses that will stand up under the hardest tests. The barns at Oaklawn are filled with good horses, a new importation having recently landed, and the inspection of discrimnating buyers is invited. A handsomely illustrated catalog will be sent free to any address if you write Dunhams, Wayne, Du Page county, Ill., and mention The Homestead.

Moline Plow Co.

Within the recollection of the writer the Moline Plow Co. was an almost insignificant concern giving the attention of its very small shop to the production of Moline plows. The work, however, was set on a firm basis because the plow was right. As a result, farmers kept buying Moline plows until a little shop became a little factory, then a bigger one, and today a mammoth manufacturing institution with capital of $30,000,000. While the Moline plow still remains the chief factor in the production, additions have been made of the Mandt wagon, Heney buggy, Freeport carriage, the Monitor drill, the Acme steel and McDonald pitless scales. A quite recent addition is that of the harvester plant of Adriance, Platt & Co., Poughkeepsie, N. Y. The latter is a concern established and in operation since 1855, which produces a well-known line of goods which will make a valuable addition to the Moline list.

Cockerton's Great Offering.

On February 18th, James Cockerton will again make his annual sale of Poland China brood sows and he is one of the breeders who always puts up a great offering. We will say this for Mr. Cockerton, that he is one of the breeders who always gets a great bunch of sows together for a sale, and you will make no mistake if you attend his forthcoming sale, as you will see there one of the most excellent and useful big-type offerings of the season. In this sale he is going to sell that great sow, Long Mollie, which is regarded as one of the largest and best sows in the West. Every breeder who has seen her pronounces her one of the greatest sows in the state and he has listed her for this sale as a special attraction. He is also selling a daughter of hers that is a corker. Six tried sows, eleven fall sows and thirty of the best spring gilts you ever saw go into his sale and these are bred to Orange Jumbo, Big Wonder, A Defender and Cloverdale Wonder. The Cockerton offering is one that we can recommend to anybody who wants some good sows. Write for his catalog and kindly mention The Homestead. M. T. White will be field man at the sale. Address Mr. Cockerton at Whiting, Iowa.

Bargains in Duroc Jersey Bred Sows.

Robert Pritchard, Carroll, Neb., is advertising in this issue of The Homestead some of the choicest bred gilts and sows that will be put up for sale this year by any breeder of the Duroc Jersey hog. He has yearling sows that he is placing a very low price on, and for quality, stretch and brood sow types they will prove the very best sort of bargains. He must get rid of them very soon, as he has but very little room on his place for the extra sows and the season for farrowing will soon be here, which will take all the room that he can very well spare. To move them a little more rapidly he will for the next few weeks quote you some very low prices. Several of the gilts are out of sows by the old boar that Mr. Pritchard sold to E. E. Handley, Carroll, Iowa, Frankfort K., and are sired by boars that have the most popular blood lines. Some are by Soo King, one of the famous lot of pigs that Sol Frank sold at the Sioux City fair a year ago. They are all bred to one of the biggest spring boars that we have seen this year. He was the top of Mr. Moderow's sale last fall and is indeed a good pig. Write to Mr. Pritchard now while the chance of securing one of these bargains is still good. Address Robt. Pritchard, Carroll, Neb.

Ewing's $6,000 Superba Sale.

Bob Ewing, New Hampshire, Ohio, will sell a great lot of Duroc Jersey bred sows on February 17th. A large part of the offering will be bred to the Iowa and Illinois grand champion, B. & C.'s Col., and the noted prize-winning boar, Superba. Twenty-one will be bred to Superba and fourteen to B. & C.'s Col. Eleven will be bred to Orion Chief, a yearling son of old Orion Chief. This boar is said to be one of the greatest sons of Orion Chief living and is the making of a great sire. Two are bred to Proud Chief, one to Crimson Col. and three to Crimson Chief, second-prize boar at Ohio in 1912. He is selling eight fall pigs sired by Superba and two by McNeil's Model. Mr. Ewing recently purchased East Bros.' interest in Superba and is now the sole owner of this noted boar. Breeders generally know the high value that has been placed on sons and daughters of Superba at the leading sales during the past year. A Superba sow out of a Proud Advance dam is one of the attractions of the sale. Another good sow is by The Professor and she is a litter mate to Reformer, the International junior champion last year. Perhaps one of the best sows to be sold this winter is American Beauty by Superba, bred to B. & C.'s Col. She is all that her name implies and might have been the world's beauty, as she is about as good as one could describe a perfect sow. Send bids to H. E. Browning, representative of The Homestead, in care of Mr. Ewing. Address for catalog Bob Ewing, New Hampshire, Ohio, and kindly mention The Homestead.

McCray's Hereford Sale.

Among the seventy-six head of Herefords that will be offered at Kentland, Ind., February 26th, by Warren T. McCray, there will be no "tail ends." It is a well-balanced lot throughout and there is not a bad one in the entire offering. Among the twenty-five bulls cataloged will be found the strongest lot of herd-heading and show-yard material that has been offered in a draft sale by one breeder for many years, if ever. Fifteen sons and grandsons of the great Perfection Fairfax are listed and there should be keen rivalry to secure some of the blood of this, the greatest Hereford sire of modern years. Many sensational show bulls have been bred at Orchard Lake Farm in recent years, but in the forthcoming sale will be found some of the strongest prospects. Mr. McCray has ever produced. There are a number that Manager James McHendry would prefer to keep and grow out, but the rule at Orchard Lake Farm is to always give the public more than an even divide. A sensational youngster is offered in Duke Real by Beau Real and out of Lady Fairfax 9th, a full sister to the grand champion cow. Duke Real was a year old January 21st and in the 1912 show rings he was always at the top, being first at Des Moines, Indianapolis, Springfield and Syracuse, and second at the International show. This is absolutely as good a young bull as was ever sold from Orchard Lake Farm. Perfect Fairfax by Perfection Fairfax is a top bull in any company. His dam, Sister Perfection, was the dam of Gay Lad 6th, the Harris grand champion bull. Perfect Fairfax is a bull of great scale, wonderful depth and thickness, exceedingly strong head, with remarkable back and evenness of flesh. He was a member of the 1912 winning show herd. Another outstanding good one is Baron Fairfax by Perfection Fairfax, a low-down, thick and meaty fellow, the kind that reproduces. This bull should attract attention sale day. It would be impossible to call particular attention to each one of the bulls in this sale. There is no want in the bull line that cannot be supplied at Kentland on February 26th. The bulls range in age from yearlings to three years old and everyone is fit for herd-heading duty. The fifty-one females cataloged for the sale are a remarkable lot. Fifteen of them sell with calves at foot, nearly all by Perfection Fairfax or one of his sons. There is an abundance of show and breeding material among these females and every lover of good Herefords should be on hand sale day. In fact, there are so many good ones that it is impossible to particularize. The two-year-old Francis Brummel Manager Hendry considers the greatest prospect in the country for a show cow and he certainly is competent to judge. She is bred to Baron Fairfax. Gay Lass 5th is a remarkable young cow by Prime Lad 16th. She is a half-sister to the champion bull of 1911 and was herself close to the cow championship at many of the state fairs in 1912. Donna Lass 9th was first as a yearling at Des Moines, Indiana, New York, and second at the International. Fleeta Fairfax, winner at Chicago in the junior heifer class, and Armour Fairfax, full sister to Lady Fairfax 4th, are two sweet heifers. Dolly Dale 2d was a winner at the 1912 shows in her two-year-old form, while Primrose Fairfax by Perfection Fairfax is as thick and mellow as one could ask. Donna Fairfax and Sister Fairfax are two young heifers of great promise. And so it goes all down through the list. This will be the greatest Hereford sale of recent years. In fact, no better lot was ever offered in a draft sale by any breeder. They are bred right and under the skilful hand of Manager McHendry they will go into the sale ring in satisfactory condition. The handsomely illustrated catalog will be sent upon application. Write Warren T. McCray, Kentland, Ind., as per the advertisement in this issue. Kindly mention The Homestead.

Pederson's Poland China Sale.

On Friday, February 28th, C. M. Pederson will sell forty-one head of Poland China bred sows at Dunlap, Iowa, and he not only has a good offering, but he also deserves to have a good sale. Mr. Pederson has built up a good herd and he has bought the very best that money could buy. The sows that he is selling in this sale are bred to the three good herd boars he has been using in his herd. One of these is that splendid boar, Long Orange, and he is a son of that famous boar, Big Orange, and is out of Fussy 4th, one of the best sows ever bred by L. R. McClarnon. Another is Gold Dust Wonder, a son of the noted Hadley Gold Dust, and the other is Defender Again, a son of the show winner, D.'s Defender. Among the well-bred sows that Mr. Pederson is selling in this sale are daughters of old Miller's Chief Price, Miller's Tecumseh, Big Hadley 3d, Chief Price Again, Orange Boy, Gold Dust Wonder, Big Wonder, B Wonder and other well-known sires. Mr. Pederson is selling an excellent lot of sows in this sale and it will be a good place to buy them. Write for catalog and kindly mention The Homestead. M. T. White will be field man at the sale.

Miller's Percheron, Jack and Jennet Sale.

On Thursday, March 6th, at his barns in Kirksville, Mo., S. J. Miller, of that place, will sell twenty head of imported and American-bred Percheron stallions and mares and twenty-five head of Mammoth-bred jacks and jennets. The stallions weigh from 1,800 to 2,000 pounds, are all blacks and dark steel grays and are horses Mr. Miller has imported or have been bred in this country by reliable breeders. He knows the stallions are sure foal getters that sire high-class colts. The imported stallions were brought over two years ago and have stood one and two seasons at his barns, so that he knows they are right. The ages are right and they are ready to go into hard service. Among the mares is the second-prize two-year-old filly at the Missouri State Fair in 1911, also first-prize weanling in 1910. They are bred to Mr. Miller's imported herd stallions that are known as sires of prize winners. Among the jacks will be found some as good as are found. Planter Jr. by King Planter and out of a Clearmont jennet is the sire of several and the jack to which a number of the jennets are bred. Other young jacks are by Dandy John and a number of the good jennets are bred to Miller's Stonewall, that cost Mr. Miller $2,050. The foundation stock of many of these jacks and jennets traces direct to old Hannibal. King Mammoth, the jack that sired Missouri Queen, the 2,200-pound mule that sold for $1,600, is the grandsire of a number of head in the offering. A number of the jennets sell with colts at foot. There are some yearling jacks listed that will bear inspection and should go to some jack man who will grow them out. In future issues we shall have more to say of this offering. In the meantime write Mr. Miller for a catalog and kindly mention this paper when doing so.

Van Patten & Son's Duroc Sale—Last Call.

One of the pioneers in the Duroc Jersey business, and a man who has registered a distinct success, is the senior member of the firm of Gilbert Van Patten & Son, Sutton, Neb. Few men have been honored so many times in the show ring, few men have sent forth so many good breeding hogs, and few men hold as high a place in the esteem of fellow breeders as this man. These things are not accidents, nor can they rightfully be attributed to luck, for those who have been over the road are only too well aware that such success can only be had by years of painstaking effort and many obstacles overcome. Therefore there is reason for this measure of success of which we speak, and those starting in the business of Duroc breeding will find that these reasons may well be looked into, as they will guide the inexperienced past many a bad place in the road. The most important of all the causes of advancement in this herd was to start with the very best to be had, buy the very best that could be found from time to time, take good care of the stock on hand and give buyers a square deal in every way. Show herds were bred for, mated for, years in advance of their coming. They were not accidents. They were the result of judgment and patience. The brood sow herd has been bred for in advance and the sows now bred and that will go in the sale that will be made on February 19th are mated with the best judgment that the years of experience best direct. Uneeda Crimson Wonder was purchased over two years ago and was purchased to sire a line of big, roomy brood sows. He has certainly done his work. The country was searched for a boar to breed on the Uneeda Crimson Wonder gilts, and he was found in Model Wonder. To the writer's way of thinking this will be a splendid mating and if it does not produce results we do not know where to get off at. The blood lines are right to produce the very best and the individuals are the sort that have made world-renowned matings. We don't see how it can miss. We believe that the breeder who has his own best interest in mind will attend this sale and take home one of these sows. This sale is the day following the Geo. Briggs & Sons sale at Clay Center, Neb., and is only a few miles from that place. These are actually two of the greatest Duroc events to be pulled off this season. Arrange to attend.

Mart Sheehan's Sow Sale.

On February 24th, at his farm south of Stuart, Iowa, J. M. Sheehan will make his annual Poland China brood sow sale and he is cataloging another great offering. One of the things that always attracts attention in the Sheehan sales is the size that he has in his hogs and the bone. First and foremost is the boar, King Wonder, that heads his herd. King Wonder is one of the sensational sons of Fesenmeyer's old A Wonder and he has for a dam that famous old brood sow, Mammoth Giantess. He is an 800-pound yearling and he is the sire of many of the good sows that will be sold in the sale and he is also bred to many that are cataloged for this sale. Running through his catalog you will find daughters of that noted boar, Choice Look, King Wonder and other noted large-type hogs that have been making history for many of the noted breeders throughout the West. For this sale he has picked out some of the best tried sows he has in his herd, also some of the best yearlings and spring gilts. No herd here in the West has any better blood lines than will be found in the Sheehan herd. If any of our readers want some good sows here will be a good place to buy them. Write J. M. Sheehan, Stuart, Iowa, for catalog and kindly mention The Homestead. M. T. White will represent The Homestead at this sale.

Duncan Offers a Superb Lot of Durocs.

On Thursday, February 27, 1913, J. O. Duncan, Lebanon, Ky., will hold his annual Duroc bred sow sale as advertised in this issue. It should be remembered by readers of The Homestead that this sale and that of E. S. Mayes, Jr., Springfield, Ky., and McKee Bros., Versailles, Ky., will hold their annual sale at Springfield, Ky., February 28th, the day following this sale, and that visiting breeders and farmers from a distance will be entertained at Lebanon, Ky., the two nights of these sales, both sales being made at one expense. Mr. Duncan has an unusually nice offering, in fact, few better will be sold this year. The blood lines are the very best. The boars used are Professor Good by The Professor, dam by Col. Casey, and Bellefounder by Col. King by King of Cols., dam by Chief Orion. The sows are by Ohio Chief, Tippy Col., Col. King, B. & C.'s Col., King of Cols. Jr., Orion Chief, Garnett Col., Masterpiece, Ky. Col. and others. But among the young stuff are some specimens we wish to call special attention to. These are the fall pigs by Defender and Superba, some eleven males and three gilts being offered. They are real live ones, great in quality and massive in size. If in need of a herd boar special attention is called to these. H. E. Browning will represent The Homestead. Bids by mail or wire should be sent to him. Colonels Igleheart and Wheeler, auctioneers. For catalog address J. O. Duncan, Lebanon, Ky.

Bloemendaal & Korver Bros.

G. J. Bloemendaal & Korver Bros., Alton, Iowa, hold their second annual sale of bred Poland China brood sows at their farm, three miles northeast of Alton, on the 18th of February, the day preceding the sale of Peter Mouw at Orange City. For a man who has only been in the breeding of this class of hogs for a short time Mr. Bloemendaal has made progress that can be matched by but very few. The sale of a year ago was among the best in this section of the state and this year he has even surpassed the quality of that sale. Perhaps the most prominent feature in the herd at this farm is the big boar, Big Black Jumbo. Of the sons of the great Big Orange none has made a better record and few are likely to make a better one than this boar. He has big breeding on both sides of his pedigree, having been from a sow by the 1,030-pound Beauty's Jumbo that made a good account of himself in the herd of Geo. Castle at Inwood, Iowa. This is now one of the largest boars in this section of the state and it will hurry any other parts of the country to show one with much more size. He is not only big himself, but he gets the same size in the pigs he sires. And the good things that these pigs have do not stop with mere size. They are smooth and are good things in the yards of the man who wants to put his hogs on the market at an early age in shape to go up near the top of the sales. At the head of the Korver Bros. herd there is a yearling boar that has a lot of merit in this strain of breeding. He is Mouw's Chief by a good son of the old Chief Price 2d, the sire of so many of the good sires of big breeding, and has some of the same smoothness that marks Farver's Goliath, a son of the same boar. He is also a big one and for a yearling has made a good showing in his breeding so far. The other boars that are now heading the herds are Gerstdale Wonder, Big Wonder by A Wonder 143421 and Big Jones Again, all good selections for this line of breeding. Sows by Big Orange, the sows that raised last year the two best gilts that were in the sale, and this year bred to Gerstdale Wonder. Another of the good things in the tried sows is one by Long King 2d, out of a Big Orange dam. She is bred to the same boar as the two preceding ones. And the sow that was mentioned last week and which is good enough for mention until someone who is satisfied with nothing but the best gets her, is Big Wonder's Girl, which will be bred to Mouw's Chief. This is one of the best things in the sale consigned by either of the men. It comes from Korver Bros. The entire sale is full of the most prominent breeding and the sows are all the good kind one would expect to get from such lines. Write now for a catalog.

DO YOU WANT TO BUY HIGH-CLASS HEREFORDS?

The opportunity to pass upon one of the best lot of Herefords ever presented in a public sale ring will be given at

Kentland, Ind., Wednesday, February 26, 1913

W. T. McCRAY WILL OFFER 76 HEAD OF THE PERFECTION FAIRFAX KIND

SHOW AND BREEDING CATTLE TO SUIT ALL

25 SHOW AND HERD BULL PROPOSITIONS

15 SONS AND GRANDSONS OF PERFECTION FAIRFAX

THE 51 females in the offering are all young and of the most practical and desirable sort, show heifers and tried breeding propositions, included in the list being several daughters of PERFECTION FAIRFAX, the greatest sire of the Hereford breed, while practically all the balance are bred to him or one of his sons. Every animal in this offering will add strength to any herd in America. The representatives of the leading live stock papers, who have inspected the cattle for this sale, pronounce it without question the strongest lot, numbers considered, that any one breeder has ever sent forward to a draft sale. The big majority of the offering was produced on Orchard Lake Farm, and we submit the cattle confident they will suit the buying public in every particular. You will have an opportunity to attend both a cattle show and sale at Kentland, February 26th. The handsomely illustrated catalog tells the story. It will be sent only upon application. Mention The Homestead and address

WARREN T. McCRAY, - - KENTLAND, INDIANA

Cols. Reppert, Huxley and Igleheart, Auctioneers.

mentioning The Homestead. Ray L. Gribben, Homestead representative, will give you the most careful attention on bids and will assure you of fair treatment. Address either G. J. Bloemendaal er Korver Bros., Alton, Iowa. See advertisement elsewhere in this issue.

Jess Andrews' Duroc Sale.

On February 24th Jess Andrews, West Point, Ind., will sell forty-five bred sows at La Fayette Sale Company's pavilion, La Fayette, Ind. The offering consists of tried sows, fall yearlings and spring gilts sired by Pine Chief by Orion Chief, Col. V., Fancy Col. 2d ond other noted sires. The sows are bred to Crusader, one of the good sons of Orion Chief that Mr. Andrews recently bought in the Browning sale. Others are bred to Pine Professor, a son of The Professor. There will be one sow in the sale bred to Colonade, the Indiana and International grand champion of 1912. This is the only sow to be sold at public auction this year bred to this noted boar. This is a high-class offering and every animal sold is well bred and of the useful sort. Bids sent to H. E. Browning, Homestead representative, care of Mr. Andrews, will receive careful attention.

Stemen & Son's Duroc Sale.

E. C. Stemen & Son, Middle Point, O., will sell a grand offering of sixty bred sows at their farm on February 21st. The offering is sired by fifteen of the most noted boars of the breed. The offering consists largely of yearlings and spring gilts and every one is a good one. The boars used in this herd are as well bred and as good as can be found anywhere. One of the main sires, Highland King, an International champion, has sired most of the young show herd that this firm exhibited at the leading fairs this fall. At the Hanks & Bishop and Droz sale in Iowa last week the top gilt in the sale was sired by Highland King. Defender King is also used on a part of the offering. He is a large, smooth son of Defender. There will be a few gilts bred to Proud Professor, a son of Professor and out of a Proud Advance dam, a line of breeding that has never failed to make good. Others are bred to Fancy Col. 2d, a son of Mahan Bros.' champion, Fancy Col., and a few are bred to I Am Buddy K. and Wonder Chief, two boars that sire the big type. This is the best and most even lot of sows that this firm has ever offered. Send for catalog, mentioning The Homestead. H. E. Browning will handle bids sent to him in care of E. C. Stemen & Son, Middle Point, Ohio.

Crow-Type Poland Chinas.

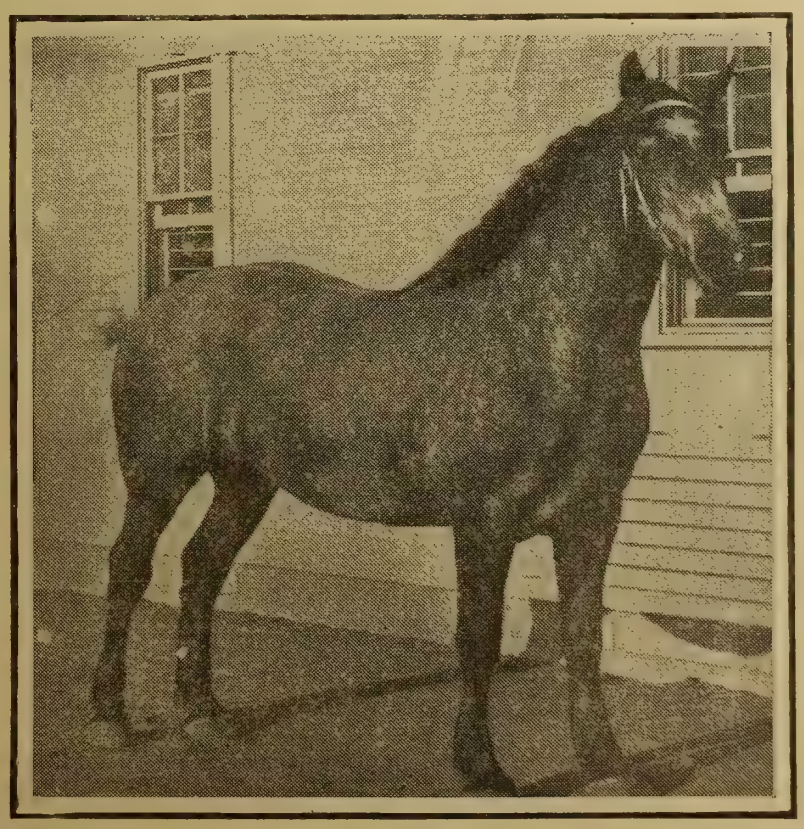
W. J. Crow, Webb, Iowa, holds his twenty-fourth annual sale of Poland China bred sows at his farm on February 21st, the day following Ruebel Bros.' sale at Marathon, Iowa. These two sales are only a few miles apart, making it an easy matter to attend both of them. When considering which sales to attend this season or any other season, one wants to go where there are hogs which will do best in their new homes. The object of all breeding is improvement and places where one can buy what he is sure of, that is, with a list of ancestors of uniform enough type to insure their offspring of producing their own sort, are certainly the places one would prefer to go for breeding stock. Mr. Crow is not merely a raiser of pure-bred hogs, for he has always had a definite idea of what he was after and why he wanted it. As a result he has established about as practical a type of hogs as farmers want or need. Since his herd is the result of continuous selection for a single type, the ancestors of the sows he sells this year are uniform, and Mr. Crow's stock breeds uniformly. Hogs that are produced by a constructive system like this are the ones that give the most satisfactory returns. That the products of this herd give such returns is proven by the number of them that head prominent herds, that have topped other breeders' sales and that have made money wherever they have gone. Get the catalog now and come to the sale to buy sows that are in good condition, are good types, big, smooth and thrifty. Crow's Kind is an exceptionally showy boar and the young boars, Straight Edge, Big Porter and Brilliant, are the sort one expects on Mr. Crow's farm. Ray L. Gribben, Homestead representative, attends the sale. Send him your bids. Address W. J. Crow, Webb, Iowa. See advertisement elsewhere in this issue.

A Trio of Great Young Bulls.

T. J. Sands, the well-known breeder of Short-horn cattle, Robinson, Kan., whose well-bred herd is so favorably known, has on his farm at this time three great young Scotch bulls that should find homes at the head of good herds. Two are roans and one is red and all are royally bred. The oldest is a mellow roan, calved in July, 1911, and is by Royal Diadem and out of a cow by Golden Lad, second dam being Imp. Nonpareil 35th. This young bull is a splendid individual, heavy boned, with fine head and horn, in fact, a young bull of good conformation, a great prospect. He has plenty of size, weighing at this time about 1,300 pounds. The second young bull is a month younger than the first named, a roan Cruickshank Sybil by Royal Diadem and out of a dam by Imp. Royal Pride, and is also a great prospect with lots of breed character. The third is a red, a little over a year old and is by Royal Leader, out of a dam by Blythesome Baron. Mr. Sands is pricing these bulls well worth the money and anyone in the market for a pure Scotch herd header will do well to get in touch with him at once. This herd is one of the best bred in the West and is rich in the blood of such tribes as the Sybils, Nonpareils, Violets, Clippers, Orange Blossoms, Elizas, Claras, etc. See advertisement elsewhere

Hart & Garrison's Short-horn Sale.

Monday, February 24th, at the farm of G. E. Hart, near Summerfield, Kan., is the time and place of the sale of Short-horn cattle to be made by those well-known breeders, G. F. Hart and A. B. Garrison. The offering, which will consist of eighteen bulls ranging in age from seven months to two years and the balance aged cows and heifers, contains many choice animals and will be presented in just ordinary working condition. These breeders pride themselves on producing the profitable, heavy-milking and regular producing Short-horns, and there is not an aged cow in the offering that has not proven her worth as a milker and regular producer. The offering consists of both reds and roans and many of the young bulls are the real herd-heading kind, while the heifers are a choice lot. The blood of the great show bull, Secret Prince, is prominent in the breeding of the offering, while the cows and heifers of breeding age are mated with the great Scotch bull, My Choice, owned by Mr. Garrison. This bull is one of the outstanding bulls of the breed and is royally bred, being a grandson of the great Choice Goods, and is a bull of great individual merit, full through heart, very strong on the back, well arched ribs and let down well in flank and is a remarkably smooth, mellow fellow, a natural flesh carrier, and is proving himself an exceptional breeder. If in the market for a vigorous young bull ready for hard service, an aged cow of proven worth as a regular milker and producer or some splendid prospects in the heifer line you should by all means attend this sale. The catalogs are now ready and will be mailed for the asking. Write either Mr. Hart or Mr. Garrison, Summerfield, Kan.



The above illustration is a likeness of Joconde 82289 (96967), a great three-year-old Percheron mare owned at Paul's Percheron Place, Washington, Iowa. See advertisement in this issue.

The Mayes-McKee Bros. Great Defender Bred Sow Sale.

On Friday, February 28, 1913, E. S. Mayes, Jr., Springfield, Ky., and McKee Bros., Versailles, Ky., will hold a Defender-Prince Educator sale of bred sows as per advertisement elsewhere in this issue. A few days ago E. S. Mayes sold to McKee Bros. the great boar, Defender, and twenty sows bred to him for $7,500 cash, and they now join hands in a great bred sow sale at Mr. Mayes' farm. The twenty sows bred to Defender are offered Duroc breeders to place a value on. Several pigs by Defender and Superba are also offered. Some ten sows will be offered by Defender, Superba, Garnett Col. and others, bred to the 1912 state fair champion and grand champion, Prince Educator, and he himself will be sold to the highest bidder in this sale. This is a sale of great opportunities for Duroc men for it is very seldom an offering of this kind is exposed at auction. Defender has again demonstrated his might in the Duroc world. Every Duroc man takes off his hat to him and acknowledges him the king of the breed. This is a sale of mighty moment to the breed and all lovers of Durocs are invited to attend. H. E. Browning will represent The Homestead. Colonels Wheeler and Igleheart, auctioneers. For catalog address either E. S. Mayes, Jr., Springfield, Ky., or McKee Bros., Versailles, Ky.

Storm's Volunteer Sow Sale.

One of the most important sales of Duroc Jersey bred sows to be held this winter is that of J. W. Storm, Seville, Ohio, on February 20th. Mr. Storm had the confidence in the Duroc Jersey breed to give up $1,500 for Volunteer, an International grand champion, and in this sale he will sell a number of sows bred to this noted sire. They are a useful lot of sows and gilts and in excellent condition. There will be sows sired by Orion Chief, Defender, A.'s Defender, Defender King, Jack's Friend and Crimson Col., bred to Volunteer. Sows sired by such noted boars as the above cannot help but prove valuable propositions bred to Volunteer. Volunteer was the champion boar of the South in 1911 and was purchased by H. E. Browning for $1,000 and rounded out the year by winning grand championship at the International the same year. In January, 1912, Mr. Browning sold a number of sows bred to Volunteer, one of which was purchased by Dr. Herr, and he sold the litter last fall in this sale for $1,100. Volunteer boars and gilts have sold well in every fall sale in which they have been offered. In the Knoxville, Tenn., sale the get of this noted boar were in strong demand. Mr. Storm has bought nothing but the best sows to be found, regardless of price, and many of these go into this sale. He has the confidence in Volunteer's ability to sire good ones and feels that every man who buys a sow in this sale bred to this boar will want more of the same blood in the future. He is selling two sows bred to Defender, one bred to Col.'s Pilot Wonder, the 1912 Ohio champion, and a few bred to Royal Superba and Plenty Good E. Nuff. The former is sired by Superba and out of Fond Memory by Ohio Chief, and the latter boar is by Good E. Nuff and out of a daughter of High Chief. This sale follows the Ewing, Sprague and Herr & Miller sales and it will be to the interest of every Duroc Jersey breeder to attend Mr. Storm's sale. Mr. Browning has no more sows for sale bred to Volunteer and this will be the only opportunity to get a sow bred to this grand champion. H. E.

PFANDERS' GIANT POLAND CHINAS

The Largest and Heaviest Boned POLANDS in America

Clarinda, Iowa, Wednesday, February, 26, 1913

45 HEAD 45

45 HEAD 45

J. W. PFANDER & SONS, - - - - - CLARINDA, IOWA

Col. H. S. Duncan, Auct. M. T. White, field man for The Homestead

Browning will represent The Homestead and handle all bids sent to him, in care of Mr. Storm. Send for catalog, mentioning The Homestead.

Pfander & Sons' Great Sale of Giant Poland Chinas.

On February 26th, at Clarinda, Iowa, J. W. Pfander & Sons will make their annual sale of their celebrated giant Poland China brood sows and it should be one of the great sales of the year because they have some of the largest sows living. Those who want size will certainly find all they are looking for in the Pfander herd. The dozens of breeders who inspected their herd last week all said they had some of the largest sows they ever saw, and we don't think you can find them any larger, no matter where you go. Just a word about some of the boars they are now using. Big Ben is a half-brother to Big Joe, that made such a hit with his gilts in the Fesenmeyer sale last week. Then comes that great young boar, King of Wonders, a son of the noted A Wonder, and Pfander & Sons refused a spot cash offer last week of $800 for this hog. Many of the best sows they will offer will be bred to these two young boars. In their announcement they say: "We are recognized the world over as breeders of the big-type Poland and while we do not claim to have all the big hogs in the world, we do claim to have just as large hogs as any breeder, regardless of breed or color, and we have this size with feeding quality that makes our hogs produce as many pounds of pork for the feed consumed as any hog on earth and they will do so under disadvantages that would exterminate the show hog. This makes them the farmer's hog without considering anything farther, and he is the man we must all depend on. Then when we consider their larger litters farrowed and saved, the thriftier, healthier pigs and their superior rustling qualities, their freedom from trouble at farrowing time, their superior suckling qualities and their ability to make a growth and raise two litters of pigs each year they prove they deserve their present position, at the top of the list. We believe our herd sows will average more pounds to the head, age considered, than any herd in existence. We realize others are making this claim, but all we ask is for those men to measure their stuff and then come and put the same lines on our hogs. We have more Long King and Giantess blood than any herd and we believe no better cross was ever made to produce brood sows. We have in Big Ben one of the greatest young hogs of the breed, and King of Wonders promises to make as large a hog as we ever owned. We are better fitted than we ever were to put out good hogs and big hogs. In the future we intend to go on getting the hogs bigger and better as fast as we can. They don't get too big for us as long as they will feed. We intend to go right ahead for another third of a century, and all we ask is that our record as a firm will be as clean and full of good, square dealing in the next third of a century as it is in the past. In presenting you this catalog we do so thinking it contains the descriptions of as valuable an offering as we ever drove into the sale ring. The offering has been raised right here on the farm and had plenty of range at all time. We have fed soft feed to a great extent and every hog on the place gets slop twice a day. This, of course, reduces the amount of corn fed and increases the value of the hogs, we think, as breeders and producers. These sows were in fair breeding condition when we commenced to breed and have slopped every day since. We will finish them from now on with slop so they will be in the very best condition to farrow good litters we know how to put them. We are proud to consign these sows to you. We know they are bred in the very best of the big-type blood and nothing but that. We know they are from a herd of sows second to none and sired by outstanding boars. They have been cared for right and are mated to as good boars as the breed has produced. They are the real big, long, big-type sows, and as they are immune from cholera it should be an added attraction. If you want show hogs or ornaments we have not got them, but if you want great big, long, heavy-boned sows with plenty of feeding quality, we invite you to attend this sale and guarantee to please you." M. T. White will represent this paper at the sale and wil care for any bids sent in his care.

Zimmerman's Poland China Sale.

On February 22d, at Neola, Iowa, W. E. Zimmerman will sell forty head of big-type Poland China sows and he has some exceptionally choice sows to offer. Just a word regarding his herd boars. Mastodon King was the 600-pound yearling that he bought of Ed Hickey and he is a son of the noted boar, King Mastodon. This boar was the top of the Hickey sale a year ago last fall and he has been a splendid breeder for Mr. Zimmerman. His young boar is Pawnee's Price, a son of the great Smooth Price. In this fellow Mr. Zimmerman has one of the best young boars in the state. He is a half-brother to the well-known boars, Big Joe and Big Ben, that are now heading the Fesenmeyer and the Pfander & Sons herds and these boars are all strictly in the limelight just now. Pawnee's Price is an outstanding boar in many ways and he is certainly a worthy son of his sire and he must be classed right along with Big Ben and Big Joe. You will therefore realize that Mr. Zimmerman has a boar that is the equal of any of them and many of the sows that he is selling in this sale will be bred to this boar. Among the very choice sows he will sell are three daughters of Big Orange and here will be attractions for everybody. Then there are two by Lawson's A Wonder Jumbo, two by Big Buddy and three by Big Wonder. Nobody has any better than these and their breeding is what they are all after just now. He has other sows that are just as good and, take our word for it, Mr. Zimmerman is going to show you a good bunch of sows in this sale. You will want to see his catalog. When writing for it kindly mention this paper and M. T. White will represent this paper at the sale and will care for any bids sent in his care.

Last Notice Ruebel Bros.' Sale.

The sale of big Poland China brood sows that will be held at Marathon, Ia., by Ruebel Bros. is one of the chief attractions in the series of sales that will be held that week. The boars that have sired the sows are of the best sort, one of them being the sire of the boar, Gerstdale Wonder, now in the herd of G. J. Bloemendaal. This boar, Ruebel's A Wonder, has always gotten a good line of stock and some of the big sows in the sale bred to this boar will be the right sort to buy if the object in making the purchase is to get big hogs and the best blood lines. The other herd headers are Price's Giant, another of the biggest kind; R.'s Longfellow, and the champion, Chief Again Price. There is an unusually good lot of spring gilts that are sired by this Chief Again Price and the most of them, bred to Price's Giant, will make an extra good cross. The gilts are all big and smooth and will compare with any that may be offered. Many of them will weigh around 400 pounds by the day of the sale. The fall gilts have as much size and smoothness, and among them are a few that look good enough for a try at the show ring. The catalogs will give the breeding and accurate descriptions of this offering. Write for them now, mentioning The Homestead. Address Ruebel Bros., Marathon, Iowa. See advertisement elsewhere in this issue.

Limestone Valley Farm's Thirty-fifth Annual Jack and Jennet Sale.

The thirty-fifth annual sale of jacks and jennets to be held at Limestone Valley Farm, Smithton, Mo., on Tuesday, March 4th, will, like all the sales held by L. M. Monsees & Sons, be a good place to select an absolutely high-class jack to head a herd of jennets or for raising a superior class of mules. Those desiring to found herds should not overlook this event, as the class of jennets and the jacks to which they are bred are among the greatest the breed has produced. There are listed thirty-five head of jacks and twenty-four head of jennets and it is impossible to find more bone and quality in a like number. The twenty top jacks are fully up to, if not superior, to any twenty head ever offered in former Limestone Valley Farm sales. Buster Mammoth, second-prize three year old, and Dick Moore, third-prize three year old at the Missouri State Fair in 1912, are listed. They are high-class jacks and are great jacks to use on either mares or jennets. John Stypes, a six year old by High Tide, that sold in 1908 for $2,230, is a great jack with great substance, bone, finish and action. He has proven a great breeder and should be appreciated. Monsees' Monster, one of the largest and heaviest jacks in the sale, should go to someone wanting a jack with great head and ear, plenty of bone, style and action. He is well broke and a proven breeder. Empire Jr. by Gov. Wood, the sire of Dr. McCord, is a heavy-boned fellow with good head and ear, plenty of style and action and a good breeder on both mares and jennets. High Style Big Boy by the noted High-style, that sold in 1908, is a great young jack that sires mules that sell up to $125 each at weaning time. Monsees & Sons have their barns full of this kind of jacks so that buyers will have ample opportunity for selections. They are not expecting to beat former sale records, but do know they have an offering that will compare favorably with those that made world's records. The jennets are in foal to the World's Fair grand champion, Orphan Boy 696. Several have colts at foot by the great Orphan Boy.

The Kansas City Hereford Cattle Sale, March 4th and 5th.

The sale of Hereford cattle to be held at Kansas City, Mo., on March 4th and 5th by Funkhouser, Gabbert and others, under the management of R. T. Thornton, 1309 East 15th St., Kansas City, Mo., will be a good sale to attend if in search of bulls for herd headers or range use or choice females to add to good herds. Sixty bulls and forty females are listed and each contributor is putting in well-bred cattle that are choice representative individuals from his herd. Nine bulls and six females are from the well-known Funkhouser herd at Plattsburg, Mo., and are by sons of March On 6th or out of daughters of this noted sire. As in former consignments from this great herd, there will be found choice herd header material. W. A. Dallmeyer, Jefferson City, Mo., sends four extra good bulls and four high-class heifers from his Buena Vista Farm herd. These cattle carry a great deal of Anxiety blood and are representative of the kind produced at Buena Vista Farm. The bulls are a splendid lot with extra good bone, and are good enough for use in pure-bred herds. One heifer is not quite of breeding age and the other three are bred to Paragon 12th. T. W. Carmichael, Odessa, Mo., who has sent many good things to former sales, is sending four bulls and seven cows and heifers. Sir Simoon 5th, a grandson of Beau Brummel, and Dandy Andrew, that has three yearling bulls by him, should prove attractive. Sir Simoon 5th is a coming four year old and has proven a great breeding bull and should go to some appreciative breeder. His sons have splendid dark red coats and weigh 1,200 to 1,400 pounds and are absolutely well bred. Three of the cows have heifer calves at foot and all are bred to Sir Simoon 5th. One cow is by Erling's Lad, one by a Columbus bull, one by a son of Simoon that was a Royal winner and four are by Paragon 4th. R. T. Thornton consigns seven daughters of his great breeding bull, Caesar, and one daughter, King Francis. They are the

ST. PAUL, NEBRASKA

kind Mr. Thornton would prefer to keep but he puts them in in order to fill the sale. Everyone interested in Hereford cattle should send now for a catalog. See advertisement elsewhere in this issue for Mr. Thornton's address, to whom inquiries should be addressed.

Truax & Son's Bred Sow Sale.

On Monday, March 3, 1913, John Truax & Son will hold their bred sow sale at their farm near Sycamore, Ohio. They have just completed a fine hog and sale barn, so everybody will be comfortably taken care of. Trains will stop at the farm. As per their advertisement elsewhere in this issue they will sell fifty head of select Duroc sows of the highest quality and most approved breeding. They are sired by Defender, Tippy Col., Superba, Cherry King, Highland King, Volunteer, Col. Beabout, Jack's Friend, Joe Orion II., Instructor, The Professor, Orion Chief, Premier Col., Kelley's Pilot Wonder, Morton's Top Col., Col. Prince Again, Col., S., Crimson Wonder Again and others. Twenty-eight of these are bred to Tippy Col., the noted boar that is owned jointly by Chas. F. Sprague and themselves. Twenty-two head are bred to the noted boar, Oakland Ohio Chief, the best boar ever sired by John's Ohio Chief. The breeding is all any live, up-to-date Duroc man could ask for. The quality is high class and we know of no better place to buy bred sows than of John Truax & Son. This is one of the very best bred sow sales of the season and a great opportunity to fill in the required number of sows you need. H. E. Browning will represent The Homestead and mail or wire bids should be sent to him. Colonels Igleheart and Gebhardt, auctioneers. For catalog address John Truax & Son, Sycamore, Ohio.

McCarty's Hereford Dispersion.

T. E. McCarty, for nearly a quarter of a century a breeder of Hereford cattle, will disperse his herd at the Union Stock Yards, Peoria, Ill., February 27th, the day following the sale of W. T. McCray at Kentland, Ind., and at that time there will pass into other hands one of the best bred lots of Herefords offered at public sale in a long time. When Mr. McCarty founded his herd he realized the value of a good sire, and a perusal of his catalog discloses the fact that he has used in his herd such outstanding good ones as Leary by the noted Lars, Clarence by Corrector, Statesman by the mighty March On, Beau Donald 6th, Perfection Jr. by the champion, Perfection, and Bondsman by Disturber. Thus his Herefords have an infusion of blood lines that are among the most attractive in the breed, and this fact should appeal to the buying public. Many of the cows in the sale have calves at foot by Bondsman or Perfection 2d, a son of Perfection Jr., while the get of the other sires used in the herd are numerous, as practically the entire offering was bred by Mr. McCarty. These cattle are only sold owing to the fact that Mr. McCarty is making some changes in his farming operations, otherwise the Herefords on his farm would not be parted with. The cattle will be presented in thrifty breeding condition, not fat or pampered, a fact that will be all the better for the buyer. This sale comes the day following that of W. T. McCray at Kentland, Ind., and direct railroad connection from that point to Peoria can be made the evening of the McCray sale. Look up the advertisement of the McCarty sale in this issue and write for a copy of the catalog to T. E. McCarty, Princeville, Ill., mentioning The Homestead when you write.

McClarnon's Big Orange Sale.

On February 26th, at Braddyville, Ia. (the sale to be held at night, after the J. W. Pfander & Sons sale is over) L. R. McClarnon will sell forty-five head of his noted large-type Poland China bred sows and his will be one of the sales where they will all be interested. One of the things that makes his sale an attractive one is the fact that he owns a half interest in that celebrated boar, Big Orange, and he will sell twenty-seven of his daughters in this sale. He is selling some of the best Big Orange sows we ever saw. Nineteen of these will be fall sows and the rest will be spring gilts. This will be the last chance this season where breeders will be able to secure Big Orange sows in any number and, as here is the fountain head where they can be obtained, it will therefore be a good place to buy them. These Big Orange sows will all be bred to Colossal, and he is not only one of the very large boars, but he is one of the best breeding boars he has ever used. He is also selling ten splendid spring gilts and fall sows sired by Colossal, as well as some by Pawnee Nelson, Jumbo Prospect and one good daughter of Ellerbroek's A Wonder. One of the very best Big Orange gilts that he will sell is out of an Ellerbroek's A Wonder dam and she is a corker of a good one. He is selling a number of splendid fall sows by Colossal, out of Grand Girl, and these will be bred to Big Orange himself. Here will be some of the great bargains in this sale. There will be four excellent Big Orange sows out of Venus by Big King, and these are bred to Colossal. There is not a poor sow in the bunch and any one of these would look good in the best of herds. He is selling a good Colossal fall sow out of Best Ever by Grand Wonder and she is a good one. He is selling ten of the best Big Orange spring gilts that you ever saw. The sows that he will sell in this sale will be bred to Big Orange, Colossal and A Big Orange. There will be so many tops in his sale that there will be enough to go around. By al means send for the McClarnon catalog and kindly mention this paper. T. White will represent this paper at the sale and wil care for any bids sent in his care.

Oaklawn Stock Farm.

George Eggert, proprietor of Oaklawn Stock Farm, Newton, Iowa, informs us that his sales during the past week were good. They were as follows: A good two-year-old Belgian stallion to John Lasquitz, Kellogg, Iowa; a good dark gray two-year-old Percheron stallion to Fred Otte, Laurel, Iowa; a fine team of extra good gray mares coming three years old to Charles McElroy, Newton, Iowa; an extra good two-year-old Shire stallion to J. Cranbeck, Atlantic, Iowa; a fine black two-year-old Shire stallion to S. D. Prince, Rockwell City, Iowa, and a wonderful three-year-old Belgian stallion weighing 2,100 pounds to John Doan, Rockwell City, Iowa. These sales indicate that Mr. Eggert handles the class of horses that suit the people. Horsemen will always find a good collection at Oaklawn to choose from, as Mr. Eggert always has a good assortment of big, drafty stallions and mares, both imported and home bred. Our readers will find him a gentleman in every way and your business relations with him will be pleasant. If you are interested see advertisement elsewhere and write him, mentioning The Homstead.

Sprague's Duroc Sale.

Chas. F. Sprague, Lima, Ohio, will sell a grand bunch of bred sows on February 18th. There will be eleven fall yearling and spring gilts bred to the noted sire, Cherry King. We can conscientiously say that no more popular boar of the breed lives and his produce have made a reputation for him that could not be gotten in any show ring. It is his ability to sire the good ones that has made him the popular boar that he is. His blood lines are right and that is one reason of his being able to produce the right kind. Twelve sows will be bred to Jack's Friend, the 1911 Ohio grand champion and a boar that is siring the big, long, smooth kind. There will be six bred to Pal's Prince, the 1911 Indiana grand champion and a full brother to Colonade, that was grand champion at Indiana and the International in 1912. A few will be bred to Joe Orion 2d, another big boar that is siring the right kind. Breeders who know the sort of sows Mr. Sprague bought in the Jackson herd and the many other good sows that he has purchased can fully realize that this offering will be as good as ever went through a sale ring. In no sale this season were there more richly bred animals than in this. It would be hard to find a better place to buy a sow that will make money than in Mr. Sprague's sale. The offering has been fed and cared for with an eye to their future usefulness. If you have not received a catalog write to Mr. Sprague at once, mentioning The Homestead. Mail or wire bids sent to L. R. Browning, Homestead representative, in care of Mr. Sprague, will receive careful attention.

Rouselle & Son Make Nice Horse Sales.

Within a week after landing with their winter importation of stallions and mares, Jos. Rousselle & Son, Seward, Neb., had sold several stallions and mares. M. Kleinhold, Friend, Neb., recently purchased one stallion and two mares, and Henry Johnson, Red Cloud, Neb, purchased one Belgian mare and one Percheron stallion. These horses are out of one of the finest importations that has ever come to Nebraska. Jos. Rousselle is one of the strongest advocates of the best that there is in the country. He imports nothing but top stuff. He is a native of France and knows the horse business from the ground up. He is personally acquainted with practically every leading horse breeder on the continent and the class of horses that he brings to his barns every year are not surpassed by any imported. There are men who import more, but not any better. Rousselle & Son have on hand right now a choice lot of stallions and mares and those looking for the best will do well to write for full information at once. You will find that the prices asked for these horses is about the same usually asked for horses that are decidedly lower grade. Mention The Homestead when you write.

Halford's Great Offering.

One of the greatest offerings of big-type Poland China brood sows that will be sold this winter will be the offering that R. W. Halford will sell at Manning, Iowa, on February 21st. We have referred at length in last week's issue about this offering and we repeat that it is not only the best offering that Mr. Halford has made, but it is also one of the greatest offerings that will be disposed of this winter. There will be twenty-five sows in this sale that will be bred to his great boar, Mabel's Wonder, and this should certainly be an attraction for those who are wanting to buy the very best. Few boars today in the West have a better reputation than has this boar, Mabel's Wonder. He is a son of the noted hog, Smooth Wonder 2d, and he is a son of Fesenmeyer's old A Wonder. Mabel's Wonder is one of the really 1,000-pound boars and he is the first 1,000-pound boar that won first prize at the Iowa State Fair. He is one of the few large-type boars that has won his way to the front in the show rings and incidentally in the hearts of those breeders who are wanting size and quality. Some of the sows are bred to his 920-pound Long Jumbo, and others to Long Price by Chief Price Again and a few to Perfect Wonder. He is selling ten of the grandest matured sows that has ever been sold in the West and these are daughters of some of the most

L. R. McCLARNON'S GREAT SALE

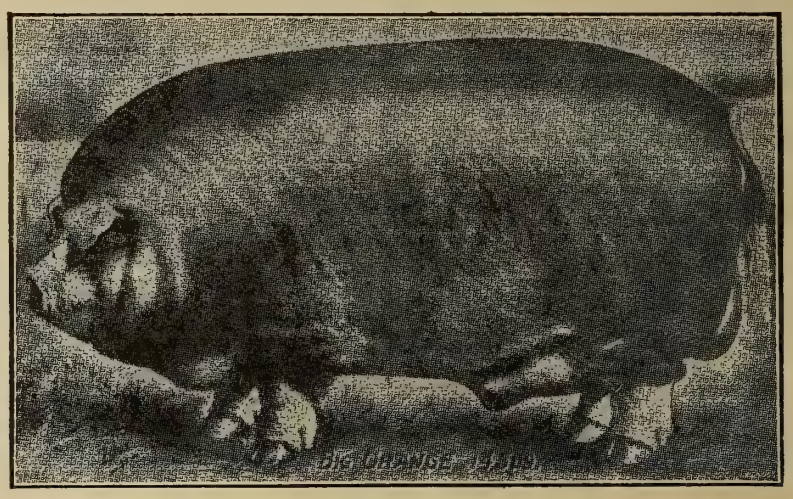
BIG ORANGE BRED SOWS

Braddyville, Iowa, February 26, 1913

40--Head--40

30 Head Big Orange Gilts and Fall Sows

10 Daughters of Colossal.



These sows are all bred to the 1,000-lb. boar, **Colossal**, and **A Big Orange.**

My sale will be held at night, and a special train will be ready to take the boys down from the Pfander sale at Clarinda. I am selling 30 head of the best Big Orange gilts and fall sows that have ever gone through a sale ring. Also daughters of the 1,000-lb. boar Colossal, others by Pawnee Nelson and other great boars. Write for catalog and mention this paper. Address

L. R. McCLARNON, BRADDYVILLE, IOWA

Col. H. S. Duncan, Auctioneer

M. T. White, field man for this paper

day. H is also selling spring and summer yearlings and a lot of fall sows. Those who have seen the Halford offering pronounce it one of the greatest bunches of strictly large-type brood sows that will be sold in the West this winter and there will be daughters of more noted big-type boars in his sale than you will find in any other one offering. You should certainly see the Halford catalog and, if possible, go to the sale. Kindly mention The Homestead when writing for it. M. T. White will represent this paper at the sale.

Briggs & Sons' Sale of Immune Durocs —Last Call.

One of the greatest individual offerings of Durocs to be sold this winter in the entire hog country will be the offering put up by Geo. Briggs & Sons, Clay Center, Neb., on February 18th. These hogs will be particularly valuable on account of them being immune. These hogs were all treated last summer and are in the finest thrift possible and are safe investments. Briggs & Sons are good stockmen. They understand the hog business, use as good boars as are possible to secure and take care of their stock in a good, sensible manner. It is worth money to buy hogs of this firm, for their stock makes good. A breeder of our acquaintance bought a gilt in the Briggs & Sons sale last winter, paying a high price seemingly for the same, but in a sale held by him recently the pigs out of that gilt averaged $20 per head more than those of any line of breeding on his farm. Her litter in the sale, there were five of them, sold for nearly enough more than the average to pay for the sow. There were also three boars in the litter, two of which are heading good herds, either of them being valued at much more than this high-priced gilt sold for in the Briggs & Sons sale. This is the sort of stuff you buy when you buy of these men, and the same quality of stuff sells in few places for as little money. True, Briggs & Sons' sales always look well in the sale report, but those not attending these sales have no adequate idea of the excellence of the offerings put up. The writer would like to see a good attendance at this sale, not that we want you to help Briggs & Sons, but rather we want you to help yourselves, for we know that here is a place to do it. When it comes to buying a Lincoln Wonder sow bred to the sensational sire and show boar, Crimson Wonder 4th, or to Queen's Crimson or to Cleatham's Pride, and then being immune, there is simply no investment that we can think of that will equal it. The writer asks all good Duroc men who are looking for good stuff to attend this sale, also the sale that will be held on the following day at Sutton, Neb., by the veterans, G. Van Patten & Son. No greater Duroc values will be offered anywhere than these two sales. It will be a pleasant trip, one easily made, and not of sufficient length to tire one. The catalogs may yet be secured, but act immediately.

Wendt's Duroc Jersey Sows.

We are in receipt of a letter from W. J. Wendt, Remsen, Iowa, in which he says that the sows he is offering for sale this season are doing unusually well, and that, though they are not yet as fat as they could be, he has some that will weigh 350 pounds easily. The gilts are from the same litters as the good bunch of spring boars that Mr. Wendt had on his place last summer and for which he had such a strong demand at the Interstate Fair at Sioux City last fall. They are the good, growthy sort of pigs that one expects good results from and sows Mr. Wendt has sent out in other seasons have given uniformly good returns. Here is a little of the breeding of a few of the choicest ones. One attractive litter is by C. Indicator by Chief Indicator and out of Lady Tolstoi by Grand Champion, a grandson of old Kant Be Beat. Another of the good litters is sired by Long Hero by West's Hero, dam High Vera by High Model by Ohio Model. The large part of the gilts for sale are bred to Grand King by Crimson Climax and out of one of the good brood sows on O. S. West's farm, West's Princess. Write Mr. Wendt for the prices on the pick of the sows that are ready to go out now and see if you cannot get some of the good kind the breed has for quite reasonable prices. Let Mr. Wendt know you are coming and he will meet you at the station and be glad to show you right on the farm how they look. When you go to visit the herd get off the train at Marcus, as it is easier to get to the farm from there than from the postoffice town of Remsen. It is only about five miles from Marcus and is quite a little farther from Remsen. Address W. J. Wendt, Remsen, Iowa. See advertisement elsewhere in this issue.

Menaugh Bros.' Duroc Sale.

Menaugh Bros., Gardner, Ill., will hold their annual bred sow sale on February 22d. A Homestead representative recently looked over their offering and they are selling the most even bunch of gilts they have ever offered. They are selling some very useful tried sows sired by Defender, The Professor and other noted boars. The boars these sows and gilts are bred to are Model Boy, a son of Model Top, and out of a Commodore sow, and Good E. Nuff Yet, a yearling by the grand champion of Ohio and out of an Ohio Chief sow. The latter is a large, stretchy, smooth boar that has proven an excellent sire and a sow or gilt bred to him will make you money. They are also using Superba Jr., a good boar by Superba and out of a Defender dam. They have a good line of herd boars and they are well bred and the gilts are a good, easy-feeding, smooth lot that will grow out into a useful lot of sows. Ten tried sows, twenty-two spring gilts and a few fall yearlings make up the offering. This firm moved to this 480-acre farm from Mazon last spring and they have 250 hogs on the farm from which they have selected forty for this sale. They cultivated 180 acres of corn this year and over 180 acres of small grain, besides having cared for their herds of Durocs and Red Polls. Gardner is south of Dwight, on the C. & A. and on the Big Four between Seneca and Kankakee. All trains will be met on sale day and buyers will be taken to the farm, which is only two miles from town. You will be entertained and if you want to buy some good sows write for a catalog, mentioning The Homestead, and arrange to attend this sale. H. E. Browning will represent The Homestead and will care for any bids sent him, in care of Menaugh Bros. See advertisement elsewhere in this paper.

Washington's Birthday Sale by Jas. Lawler.

James Lawler, Clare, Iowa, sells Poland China bred sows at his farm, a half mile south of Clare, on Washington's birthday, Saturday, February 22d. Clare is on the M. & St. L. north of Tara and trains run so one can make the trip easily and get home that night. It is only a short drive from Barnum, on the Illinois Central. Mr. Lawler has heading his herd two boars that are the equal of any two boars in service in most herds. They will stand as well as any in their type, size and development in essential points. Miller's Choice by Choice by Chief Leader, out of Tecumseh Lady by Miller's Tecumseh, is a boar that last summer weighed 900 pounds or better easily. He has a big frame and is as evenly made as any big boar, and there are only one or two that are bigger right now. Chief Price A., the other boar, is by Chief Price 2d, dam Mollie A. by A Wonder 107353. Both these are big boars and the gilts by Miller's Choice, bred to Chief Price A, are as desirable big-type breeding as will be offered this year. This isn't all the good blood in the herd, by any means. There are A Wonder sows, Big Bone breeding and all have breeding of merit. Mr. Lawler has not made any attempt to boost things much in his herd, but the hogs are all there and are equal to those of many a one much better known. No one who is not old in the business often gets two better boars to stand at the head of their herd than these and there are sows and gilts in th sale that young breeders this year want to get in on. Send for the catalog of this sale and if you are not able to get there on Saturday, February 22d, and send your bids to Ray L. Gribben, Homestead representative. Address Jas. Lawler, Clare, Iowa.

Jones' Poland China Sale.

A stockman who has a greater interest in the pure-bred live stock business than the dollars and cents that are in it is Orville O. Jones, York, Neb. He breeds Poland Chinas, Short-horns and Polled Durhams and Barred Rocks, because they are profitable as a matter of course. Yet a man with the business ability that is possessed by Mr. Jones might easily earn as much money in other lines of endeavor, but in the production of pure-bred stock he feels he is more benefit to society at large and that the country is better for his having been here. The same may be said of his farming operations. His land is richer and more productive each year. He eliminates all unnecessary expense in the maintenance of farm and flocks. He has a definite system to all farm work and every extra step and useless move is done away with. He employs the very best machinery for all work and a part of this equipment is the pure-bred live stock and poultry. The highest efficiency is demanded of everything and only such animals as show good records are maintained. The loafers and star boarders are discarded early in the race. In short, Mr. Jones is one of the model farmers of central Nebraska and employs only straight business methods in his undertakings. The writer believes that there is an increased money value to stock produced under these conditions and we would like to ask Homestead readers if the same is their opinion. We believe that the Poland China bred sows that will be sold at the Jones farm on February 21st are the practical, money-making sort and the writer would like to see a good attendance at this sale. We believe a trip to this farm is worth while. Look this Poland China offering over and see if there is not good values to be had. Send for catalog today and mention The Homestead when you write.

Madison Spencer's Sow Sale.

On February 24th, at Audubon, Iowa, Madison Spencer will make his annual Duroc Jersey sow sale and he will sell forty head of very good ones. Mr. Spencer is one of those breeders who always puts up a good offering in splendid condition and fed in such a way as will do the man good who buys them. He has drawn on sixteen of his best yearling and tried sows and twenty-four spring gilts and there are not many offerings that will be much better than he will sell in this sale. He is selling two daughters of old Massena Chief that are about as good as that well-known boar ever sired. Then there is a good daughter of H. A.'s Choice Goods, Proud Col., Col. Willetta and West King and all of these are bred to his old boar, Crimson Chief, that has proven one of the best breeding boars he ever owned. This old boar, Crimson Chief, is a son of the champion boar, Crimson Wonder Again, and out of Chief's Last Pansy, one of the best daughters that old Ohio Chief ever sired. He is also selling a good tried sow sired by Crimson Chief and she is bred to M. S.'s Pilot Wonder. He is selling an unusually choice lot of spring gilts, among which are five by his splendid boar, King The Col. 2d; two by old King The Col., the sire of Col.

OAKLAWN STOCK FARM BREEDS AND IMPORTS

PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

We have enjoyed an excellent trade in stallions and mares during the past few weeks and we believe the main reason is because we have had a class of horses that met with the approval of good horse judges. The accompanying illustration is a good likeness of one of the stallions we have for sale and will give you an idea of the high character of stallions we import and breed. Our winnings at the Iowa State Fair, 1912, where we made our first exhibit, were given in a quarter-page advertisement in the January 16th issue of The Homestead. Our last importation of stallions and mares arrived in November and these are now in nice condition and we willbe glad to show them to prospective purchasers. Our horses have the bone, size and draft qualities that all the horsemen like. They are a clean-limbed, sound, good-acting lot of horses and we can please anyone in need of a high-class stallion or mare. I treat my customers right, which is shown by the fact that I have sold men their third and fourth stallions. I will make prices that will save you money if you will give me a chance. Visit or write me, mentioning The Homestead.

GEORGE EGGERT - - - NEWTON, IOWA

L. M. MONSEES & SONS' 35th AUCTION SALE

at

Limestone Valley Farm

SMITHTON, MO.

Tuesday, March 4, '13

L.M.MONSEES & SONS

Smithton, Mo.

Gano; four by M. S.'s Pilot Wonder, and others by C. H.'s Special, Crimson Chief and other well-known boars. Mr. Spencer is using three splendid boars in his herd, viz.: Crimson Chief, a son of Crimson Wonder Again; King The Col. II., a son of old King The Col., and M. S.'s Pilot Wonder, a son of A. F.'s Pilot Wonder. These boars have proven excellent breeding boars and are good individuals. The Madison Spencer offering is a good one and one that we can recommend to those who are looking for the best in Duroc Jersey sows. Write Mr. Spencer at once for a copy of his catalog and kindly mention The Homestead. Bids sent to C. C. Carlin or M. T. White, Homestead representatives, in care of Mr. Spencer, will be properly handled on day of sale.

Choice Hereford Herd Bull Propositions.

On page will be found the advertisement of Ben Broughton, Lake View, Iowa, who is offering some splendid young Hereford bulls that are of the strictly herd bull kind, and the breeder who is going to want a good bull to place at the head of his herd should make it a point to see these at once. He has five first-class bulls, three of them sixteen months old, one fifteen and one fourteen months old. These are well grown and are lusty individuals and have the characteristic Hereford markings. Three of these are dark red and the other two medium red. He has no light-colored ones. Three of these bulls were sired by Beaumont Jr. 233039, one of the best bulls of the breed today. He weighed 2,350 pounds in his breeding form and is very deep and smooth, with a broad, level back, a characteristic that he invariably transmits to his get. His sire was Beaumont, Stewart & Hutcheon's great sire and show bull, and his dam, Beau Queen, was junior champion at the International. On the dam's side of these three bulls you will find they are sired by the noted show and breeding bull, Dudley, and this bull, with ten of his get, won twenty-two premiums at the Iowa State Fair in 1907 and was state champion, defeating the bull, Preceptor, that afterwards won the senior championship at the International. The other two bulls are sired by Lord Dudley, a bull that always won first place wherever shown, and their dams are by Beaumont Jr. The blood of old Dudley is intensified in these bulls and they will mature into 2,200-pound bulls or better. Those who are wanting a good bull to head their herd should see the Broughton bulls at once because he has some good ones for sale.

Miller and Herr's Sale.

On February 19th Miller and Herr, Lima, Ohio, will sell seventy-five head of bred Duroc Jersey sows at public auction. The sale will be held at the Miller farm near Cairo, Ohio, on the traction line. A number of the sows will be bred to Helen's Chief, probably the greatest living son of Ohio Chief. Others will be bred to King's Col., Volunteer, Superba, Col.'s Pilot Wonder, Highland King, B. & C.'s Col., Crimson Col. and Defender King. The sows are sired by some of the best known boars of the breed and are in excellent condition to produce good litters. Dr. Herr sold an interest in his herd to Mr. Miller last fall and they have decided to put a number of the very best sows they own in this sale. Thied brood sows, fall yearlings and spring gilts make up the offering. Dr. Herr has always had good sales and has purchased sows bred to the most noted boars of the breed. It was in his sale last fall that a litter was sold for $1,100 and there will be many in this sale as good as those. They will offer some spring boars sired by Defender, Highland King and Superba and some fall pigs of both sexes sired by Defender, Crimson Chief and Royal Instructor. This season is a good time to buy a herd boar and grow him out until next fall, when you are ready to use him. Prospects are good for the hog business during the coming year and it is a wise man who will prepare for it in advance. Attend this sale and purchase some of these good sows and be ready to reap the harvest next year. Dr. Herr has been a good buyer and will appreciate the attendance of breeders. If you cannot attend the sale send a bid to H. E. Browning, Homestead representative. For a catalog address S. J. Miller, R. 8, Lima, Ohio, or Dr. Herr, Elida, Ohio.

THE MARKETS.

Union Stock Yards, Chicago, Ill., February 7th.—Another week of moderate marketings has saved the beef cattle trade from severe treatment at the hands of buyers. Only about 44,000 cattle have reported at Chicago this week, a supply 6,500 short of the same week last year, but it has proved ample for requirements at the opening of the Lenten season and buyers say that the market will need another week of light receipts to put the dressed trade. The country has displayed good judgment in holding supplies down for the past two weeks, as in spite of that fact good to choice bullocks selling above the 8-cent line have declined 10 to 15 cents and the light, cheap cattle, which are now enjoying packer preference, have only advanced that much. One of the chief reasons for the sluggish tons of the market is that although values of good beef cattle have declined $1.50 to $2 per hundredweight from the high spot last December, the consumer is not known to be getting any benefit from the reduction. The retailer needs little provocation to put prices up, but is very reluctant to take anything off.

Hog trade conditions are in striking contrast to the comatose condition of the cattle market. A sale of hogs at 8 cents at mid week was scratchy, but big packers who refused to countenance the 10 to 15-cent advance that shippers and speculators made possible on Wednesday and who consequently bought practically nothing on that session, have since been forced by sheer necessity to buy freely and today were as avid bidders as anybody at the highest prices paid within nearly three months, a lot of light and butcher weight hogs reaching $8 and an extreme top of $8.05 being established. In five days this week only 448,000 hogs have reached the eleven principal markets, a decrease of 114,000 from like period last week, which ought to be convincing to killers that a 7-cent market in the country will not fill the hopper at primary receiving points, as packers tried to make themselves and others believe last week.

Despite strenuous efforts on the part of packers to keep the lid clamped down on live mutton values, light receipts east, continued moderate supplies in the West and colder weather which has been favorable for an improved consumptive demand, have been strengthening factors and the market has recovered much of its recent decline, the week closing with lambs fully 25 cnts higher and sheep 25 to 40 cents higher than a week ago. The latter are now back within 25 cents of the season's best prices and lambs are within 50 cents of the high spot. The supply of fed western ovine stock in Iowa and other corn-belt territory has been pretty well cleaned up and little native stuff is now available. Colorado shipments are now beginning to come quite freely and there will be a lot of them, but the supply promises to be strung out until June and a high level market during the remainder of the winter and the early spring is practically assured, many well-posted traders expressing the belief that shorn lambs will sell in March and April as high as wool skins are now going. Wooled lambs of prime class made $9 here today and feeders will have no logical basis of complaint if current prices are maintained. Relative to lambs, sheep are still selling low and the price spread between the two classes promises to narrow considerably within the near future.

BEEF STEERS.

The 9-cent quotation on prime heavy fed steers is in doubtful standing. Several loads of ripe cattle made this price during the first half of this week, but toward the close buyers secured an equally as good class at $8.85 and showed no hunger for them at the price. "Cheap" beef has the call and while 10 to 15-cent declines have been enforced within the last fortnight on everything selling above 8 cents, except a few choice handy weights, the low and medium-grade killers now selling largely from $7 to $7.85 have advanced as much. Below $7 steers selling for slaughter are a rough or half-fat off-colored class that feeder buyers, who are paying up very close to fat cattle prices, do not want. Weight and quality were seldom of so little merit in a load of bullocks as at present. A larger proportion of qualitied, strong-weight cattle has been included in receipts this week than last, this accounting for more sales above $8 rather than to price improvement, for good fat cattle have been notoriously hard to sell since noon Wednesday. The spread has narrowed down until a gap of 75 cents separates plain from good dressed beef stuff. A strictly good load of bulocks is now needed to make $8, while almost anything that will bleed will bring $7.50. Some plain, 1,428-pound steers sold late this week at $7.90, while 1,025-pound Hereford long yearlings sold at $8. Eastern competition is limited and there is no sign of revival of export trade. The market will need careful nursing for the next few weeks to hold present prices, though cattle on feed are in stronger hands than recently and with moderate supplies some little improvement is not improbable. Quotations:

Prime steers, 1,450-1,700 lbs	$8.75@9.00
Choice steers, 1,230-1,400 lbs	8.20@8.70
Good steers, 1,230-1,300 lbs	7.60@8.10
Plai nto fair beef steers	6.80@7.50
Fancy baby beef yearlings	8.25@8.60
Good to choice yearlings	7.60@8.20
Medium to good yearlings	6.90@7.50
Common to fair yearlings	6.50@6.80
Inferior steers, 850-950 lbs	6.10@6.50
Common steers, 750-850 lbs	5.90@6.30

BUTCHER STOCK.

Fat, handy-weight heifers have been more popular than anything else in the butcher cattle trade this week, probably because of their scarcity, and they have advanced 15 to 25 cents, while good to best fat cows have improved slightly in value, but low-grade butcher cows have held barely steady and canners and cutters have declined 15 to 25 cents from their recent relatively high level. Light butcher bulls are holding steady, but there has been a weaker turn the last few days in the trade on bologna and heavy beef bulls. Bologna and canning bulls are still very high, however, and selling on an agreeably surprising basis to most shippers. Calf values have advanced 25 to 50 cents this week under the boosting influence of light receipts, but sellers see breakers ahead in the event of any material swelling of the supply. Most of the right good to choice vealers sold today at $9.75 to $10.25. Fat strong-weight and heavy calves were seldom if ever scarcer or higher than at present. Quotations:

BEEF COWS.

Choice to prime fed cows $6.25@7.00

Peter Mouw, Orange City, Ia.

Biggest Poland Sows, Feb. 19

70 MATURED sows and yearlings selected from the foremost big-type herd. I have never sold them bigger for their ages.

Look at this list of boars; I have bred them or their immediate ancestors: **BIG JUMBO, Chief Price, Fairfellow, Longfellow 2d 52999, Longfellow 7th 95747, Long Wonder 85533, Long Wonder 90693, Surprise Wonder 4th, Smooth Big Bone, Black Big Bone, Big Knox, Big Orange, Long King, Long Orange, Smooth Wonder 2d., Big Jones, Big Wonder, Boyden Jumbo, Peter's Jumbo, A Wonder 107353** and many others that have made this type famous.

Sows bred to Black Big Jumbo, Square Jumbo, Long Orange, Big Hal, Tecumseh Jumbo, and by boars of similar breeding. This is an offering of great brood sows, roomy, stylish, showy and **all big.** Buying here means getting big blood at its very foundation. Cols. J. A. Benson and Ira Cottingham, auctioneers. Ra L. Gribben, field man. Address

Crow's Type Poland Chinas

WEBB, IOWA, February 21, 1913,

55 HEAD of bred sows and gilts by Crow's Kind 57395, Big Surprise 48274, Hadley Expansion 51540, Big Orange, King Mastiff and others. Bred to Crow's Kind, Big Surprise, Big Porter, Straight Edge and Brilliant. If you want sows that possess **utility** and **commercial value** in highest degree, attend this sale. I am selling the heaviest-boned blood lines and the hogs to match. Stretchy, motherly brood sows in condition to farrow big litters and raise them. These hogs will fatten at any age but will grow largest of any breed. They carry a great finish when properly fitted, have wide backs and are well ribbed and stand on short pasterns and best of feet. We are not booming hogs, but are selling stock that make good. **Ask our customers.** We sell strictly on merit, and that this is no empty claim is proven by our record of twenty-three years. These are the owner's statements and he makes them good. Ray L. Gribben, of The Homestead, will attend the sale. Let him buy you a sow. We guarantee satisfaction. Please mention The Homestead. W. R. Ritchie, auctioneer. Address

Inferior to fair hvy. calves	4.50@6.00

STOCKERS AND FEEDERS.

Stock cattle look and may be out of line with fat stuff, but the condition is not checking investment demand. Feed is abundant and this is the principal incentive at present for buying stockers. Light-weight, thin young steers have the call, as feeders are imbued with a desire to invest as little money as possible and to have time to "go" on. Fancy yearling stockers sold as high as $7.40 here this week and with the best strong-weight, fleshy feeders, which are making $7.50 to $7.60, show firmness over a week ago, while thin, plain to good light and medium-weight stockers have advanced from 10 to 25 cents and are as high or higher than any preceding time this year. A spread of from $6.75 to $7.15 is taking the bulk of the 550 to 850-pound steers with any show of quality and the good to choice 900 to 1,050-pound fleshy feeders are making $7.15 to $7.40 largely. Below $6.50 the country is having access to a very ordinary class of thin stockers only, good feeding heifers crowding the $6 mark.

HOGS.

Failure of good runs of hogs to develop after last week's bulge in the price list, brooding of shipping demand and elevation of prices to the highest levels reached within a period of nearly three months have brought out a lot of bullish sentiment in the trade the past week concerning the course of the market for the next sixty days. Top and average prices today showed a 30-cent advance over Friday of last week, choice light shippers reaching $8.05 and a general average price of $7.93 being made. Choice 170 to 210 pound weights are now commanding a slight premium over the best heavy and there is confident prediction that light hogs will go to a very substantial premium as the season works along. It has been a weight-making season and both pigs and light hogs are already scarce, while fresh meat demand is broad. Packers profess not to be worried about filling the lard kettle, as they expect a big run of fat sows after the spring pig crop has been weaned. Chicago receipts this week have fallen 33,000 short of last week, but shippers have increased their purchases here 8,000 head, taking more than 35,000 during the past five days, or practically one-fourth of the receipts. Today's market closed strong at the following prices:

Bulk of sales	$7.85@8.00
Mixed, 215 to 250 lbs	7.80@7.90
Mixed, 170 to 200 lbs	7.85@7.95
Medium weights	7.90@7.95
Light butchers	7.95@8.05
Heavy butchers	7.90@7.97½
Light butchers	7.95@8.05
Heavy shipping	7.90@8.00
Heavy packing	7.70@7.85
Rough heavy packing	7.55@7.70
Throwout packing sows	6.90@7.45
Fair to choice light	7.85@8.00
Light-light, 135 to 165 lbs	7.65@7.90
Pigs, good to fancy	7.25@7.75
Pigs, inferior to fair	6.65@7.20
Boars, poor to good	3.50@4.75
Stags, subject to dockage	8.10@8.50
Government throwouts	4.00@5.75
Government pigs	2.00@3.50

SHEEP AND LAMBS.

Live mutton values have recovered fairly from recent declines and bid fair to hold closely to current levels for the next week or two at least. A choppy trade between now and April is probable, but the supply is now for the most part in the hands of big feeders and can be easily controlled. As trade sentiment is reasonably bullish any declines registered will probably have the effect of abruptly checking the marketing. Prime fed western lambs and a few of the best natives sold here today at $9 to shippers and city butchers. Packers sidestepped the best grades in an effort to hold down tops, but bought a lot of in between to good killers at $8.50 to $8.85 that were relatively high. Good to choice light yearlings are worth $7.50 to $7.85 and bulk of the good matured wethers sold today at $6 to $6.10, with some light Colorado Mexicans touching $6.35 and a few two year olds $6.50. Fat ewes are selling largely at $5.25 to $5.65, depending on weight, fat handy weights having the call and selling to the best advantage. Feeding stuff continues very scarce and that trade is a narrow one, with prices holding firm and many orders going unfilled by reason of lack of supplies. Quotations:

Lambs, good to prime handy	$8.65@9.00
Lambs, good to prime heavy	7.85@8.75
Lambs, fair to good natives	8.35@8.75
Lambs, common to fair	7.75@8.35

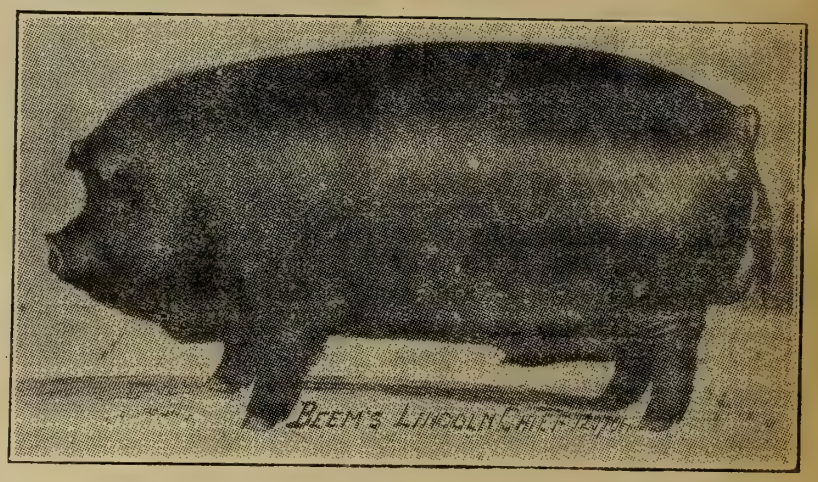
Bucks	3.50@4.00
Lambs, feeders	7.00@8.10
Wethers, feeders	4.75@5.20

IN AND AROUND WISCONSIN

MORE and more as they realize the value of bred-for-production live stock Wisconsin farmers are developing and and improving their studs, herds and flocks. With no class of stock raised upon Badger state farms is this more true or noticeable than with dairy cattle. Herds of Guernseys, Holsteins and Jerseys, three of the most popular dairy breeds, are to be found in practically every agricultural county of the state and in many localities are excellent herds of Brown Swiss and Ayrshire cattle. Reports of transfers of breeding stock sent to the offices of The Wisconsin Farmer regularly by the secretaries of these various associations indicate that Wisconsin farmers are purchasing as many or more breeding animals than at any time in the past. The last report submitted by R. M. Gow, secretary of the American Jersey Cattle Club, indicates the purchase of nine pure-bred and registered bulls and four cows in a single week. Purchases were made in that time by the following Badger state breeders: Z. Matteson & Son, Clintonville; Lauramoore Farm, Lake Geneva; L. N. Sargent, Mukwonago; H. C. Taylor, Orfordville; Fred William Ochs, Haven; O. C. Brendum, Westby, John Stuckey, Rice Lake; William Zahn, Augusta; Bible Brothers, Cazenovia; Milo Sullivan, Mindoro, and C. M. Everson, Lodi.



The accompanying illustration is that of the great Duroc Jersey boar, Beem's Lincoln Chief. Many sows bred to him will be sold in the Geo. Davis & Sons sale at Milford, Neb., February 21st. Arrange to attend.

Whether improved roads can be most economically built by contract or under the day labor system will be one of the important topics discussed at the second annual road school of the Wisconsin Highway Commission which will be held in Madison from February 18th to 21st. The men who will take part in the program are practical road builders and have had the benefit of one or more years' experience in constructing highways under the Wisconsin Highway Commission. Arrangements have been made for exhibitions of moving pictures showing the construction of concrete roads, brick pavements, and the various means of grading and surfacing macadam roads. There will be an exhibition of

PERCHERONS, JACKS AND JENNETS

AT AUCTION, AT

Kirksville, Mo., Thursday, March 6th

20 Head Imported and American-bred Stallions and Mares.

25 HEAD Mammoth Black Jacks and Jennets

STALLIONS range from 1,800 to 2,000 pounds, are a tried and proven lot of blacks and dark grays. An exceptional lot of mares safe in foal. HOMEWOOD STOCK FARM **PERCHERON, BELGIAN, SHIRE STALLIONS AND MARES**

Now is the time to buy a good stallion or mare. We have the kind you have been looking for. Our horses arrived home in October, are now perfectly acclimated and in the best of condition to do you a lot of good. The Percherons are two and three years old with size, bone and draft horse qualities, many of them weighing over a ton and not fat.

Our mares are of the best brood type. All are in foal and plenty of ton mares to select from. Every animal guaranteed sound and a satisfactory breeder. Others say we have the best bunch of two-year-old Percherons they ever saw. You will say the same. Come and see us or write for full particulars. You will find horses right, terms right and prices below others of equal merit. We have also a lot of big, heavy-boned American-bred stallions at surprisingly low prices. Don't buy until you have seen our stock. Homewood is on the main line of the Big Four and I. C. R. R., twenty-three miles south of Chicago. Trains hourly to and from the city.

KENT'S IOWA HERD OF CHESTER WHITES

200 BRED SOWS for sale from my great state fair prize-winning herd. One hundred junior yearlings and aged sows that will weigh from 300 to 500 pounds in good breeding condition. Also 100 spring gilts. If you want to buy some good ones it will pay you to come and see them or write me today for prices and the way I will ship these hogs before paying for them. I will pay your railroad fare if I cannot show you as good a herd as you can find anywhere. I can furnish you most anything you want at prices made to sell. When writing mention The Homestead. **THOS. F. KENT, R. 2, Walnut, Iowa.**

The BEST IMPORTED STOCK

Choice big mares and splendid over-a-ton-type stallions. These are PERCHERONS and BELGIANS—each a perfect specimen and remarkably low priced. EVERY DAY A BARGAIN DAY AT MY SALES BARNS.

WRITE NOW! V. W. HARMS, FAIRBURY, ILLS.

Holstein Cows and Heifers at Bargain Prices

ON account of shortage of ensilage crop in N. Y. state I am shipping west 300 head of high-grade Holstein heifers and cows, 2 to 5 years of age. These are arriving in lots of 50 every week and I will make attractive price to men that can handle a car load. All tuberculin tested and bred to registered bulls. Also few registered bulls ready for service. **ROCK BROOK FARM, STA. B, OMAHA, NEB**

road machinery and surveying instruments by the various manufacturers which will give purchasing committees an opportunity to learn of the relative merits of the various machines. The Road School will be attended by the staff of road and bridge engineers, the county highway commissioners and the county committees on road construction.

A complete soil survey of Jefferson county, Wisconsin, has been made by the bureau of soils of the U. S. Department of Agriculture and a report of this work will be issued in June. This report will contain a detailed desciption of each type of soil found in the county and indicate the crops which may be most profitably grown upon the different kinds of land. It will also contain recommendations by the department investigators as to the best methods of management and tillage to be practiced on each type of soil in order to obtain larger yields and better quality of crops and at the same time maintain and increase the present fertility.

Wisconsin's record in the production of the world's best barley is yet to be broken. At the fifth National Corn and Grain Exposition recently held in Columbus Square Oderbrucker. Barley, grown and exhibited by Assemblyman H. E. Krueger, of Beaver Dam, won the championship, as did Wisconsin pedigree barley grown and shown by N. R. Ressler, of Beloit. Sweepstake prizes were also awarded to Wisconsin growers of Dent corn, soy beans, buckwheat, clover and Badger state exhibitors of clover, sheaf grains and alfalfa hay were also accorded very high honors in the contest. This is the fourth consecutive time which the world's championship on barley has been won by a Wisconsin farmer.

The election of a state board of agriculture by delegates representing the Wisconsin College of Agriculture, the Wisconsin State Horticultural Society, the Wisconsin State Dairymen's Association, the Wisconsin Butter Makers' Association, the Wisconsin Poultry Association, the Wisconsin Cheese Makers' Association, Wisconsin Live Stock Breeders' Association, Wisconsin Bee Keepers Association.

JACKS AT

PRIVATE SALE

IF you want the BIG kind come to one of the oldest breeding barns in the state where you will find the big, heavy-boned, black fellows that will do your country good and at reasonable prices. Mention The Homestead and address
G. M. SCOTT, - Ren, Missouri.

Percheron Stallions

ONE coming three, two coming two-year-old stallions, sired by 2,200-lb. stallion, out of daughters of Georgiana, one of the greatest mares of the breed, won the blue at the Iowa State Fair, producing 18 living colts without a break, three of them state fair winners. They are a wonderful family of show horses, and sure breeders. These young stallions will all make better than ton horses. We are pricing them to sell. Address, mentioning Homestead,
WOODLAWN FARM, Sterling, Illinois.

WHAT KIND OF COLTS

WILL your mares drop this spring; pure breds worth $175 to $275 at weaning time, or grades for which you will be lucky to get $100 at same age? Starting right doesn't cost so much as you imagine, t costs no more to rear pure breds than "scrubs."

Purchase Percherons

Free Bulletin C on request. Wayne Dinsmore, Sec'y Percheron Society of America, Union Stock Yards, Chicago.

FOR SALE

HOME-BRED registered Percheron stallions and mares. Also standard bred, both sexes.

FOR SALE. Seven-year-old black, registered, good breeder, sound, state certificate. Actual weight 1,700 lbs. E. H. Hawbaker, Stratford, Iowa.

FOR SALE A pair of registered Morgan stallion colts coming 2 and 3 years old. For description and price write F. Bowman, Eldora, Ia.

FOR SALE—Bay Clydesdale stallion, 4 years old. A good individual. A proven breeder out of a family of breeders. Wm. E. Coe, Mechanicsburg, Ill.

REGISTERED PERCHERONS

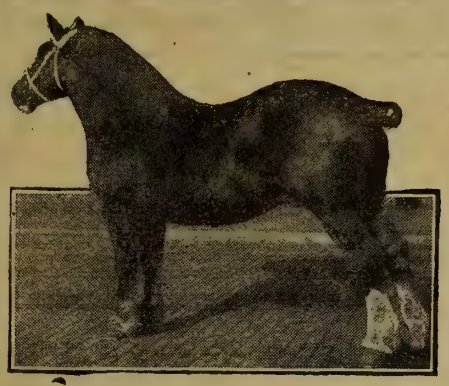
AT AUCTION

AT

FAIR GROUNDS

LINCOLN, NEBRASKA,

THURSDAY, FEB. 20, 1913



THIS sale will include thirty-two stallions and mares, each one selected for this offering and all grown and contributed by the Nuckolls County Horse Breeders' Association. This is not a draft of dealers or speculators' stuff. Everything in this sale is strictly first-class, stallions of known breeding value, others that are very promising. Some of the very best young mares that have been sold at auction this season, either east or west, will be in this sale. It is to the interest of the good horseman to be present. The consignors are Wm. Parr, Frank Davidson, and L. Wall, Ruskin, and J. C. Day & Son, Cadams, and Geo. Barber, Oak, Neb. Mention The Homestead when writing. For catalog or further information address

PERCY BAIRD, Sec'y, Ruskin, Nebraska.

Col. F. M. Woods, auctioneer.

50 HEAD OF PERCHERONS 50

AT MARSHALLTOWN, IOWA

THURSDAY, MARCH 6, 1913

This offering comprises some of the best in breeding and quality ever put through a public sale, some of them having been shown at Des Moines, Sioux City, Dakota and Minnesota State Fairs, winning everywhere. Among them is the four-year-old stallion, Jambameau 82337 (83856), first-prize winner at the great show at Minneapolis, 1912. This offering is young, clean and nearly all imported. Their pedigrees inspected and passed by the French and American governments. Thirty-eight of these are mares, and all old enough are bred to the best imported sires. All stallions offered, with one exception, are imported, and were selected with the same care we would use in picking one for our own use. Address for catalogs

R. C. DANNEN, Marshalltown, Iowa, or H. C. LOWREY, Nevada, Iowa.

Sale to be held in Harmon's sale barn, Marshalltown. Auctioneers, Col. P. McGuire, Col. John Garris.

THE GREAT TWO DAYS' SALE HELD AT STEWART, IA.

100---HEAD OF BIG-TYPE POLAND CHINAS WITH QUALITY---100

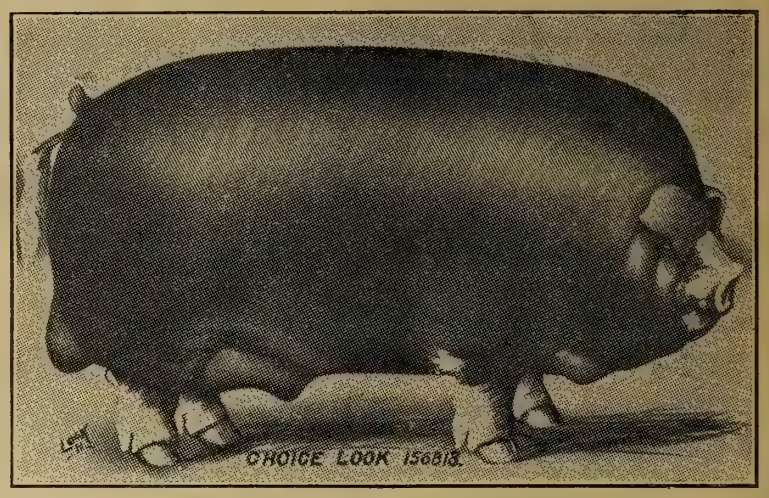
J. M. SHEEHAN'S SALE
MONDAY, FEB. 24, 1913
Sale will be held at farm

50 HEAD—15 tried sows and 35 spring gilts of the most popular big-type blood lines. The entire crop of spring gilts go in the sale. None reserved. Offerings mostly sired by or bred to the 800-lb. yearling, King Wonder, a son of "old" A Wonder and out of the Long King sow, Mammoth Giantess 1st. Others bred to Big Orange 2d, a big robust, heavy-boned son of Big Orange. King Look, a son of the 1000-lb. Choice Look and Big Nelson, a grandson of Pawnee Nelson and out of the famous brood sow, Lady Ohava. This is a strictly high-class offering, possessing immense size and quality. Plan to attend this event. Send for catalog. Address

J. M. SHEEHAN, Stewart, Iowa

Col. H. S. Duncan, auctioneer. M. T. White, field man

W. M. SCHRADER & CO.'S SALE
TUESDAY, FEB. 25, 1913
Sale will be held at farm



50 HEAD—Including all our great herd sows, fall and spring gilts. Also our two great herd boars, Choice Look and Big Improver. The greatest part of this offering is sired by the great and only Choice Look. The best breeding boar we ever owned. These sows are bred to Choice Look, Big Tom Jr. and Big Improver, one of the best pigs sold at public auction last fall. If you want size and quality, plan to attend this sale. Mention The Homestead when writing for catalog. Address

W. M. SCHRADER & CO., Stewart, Iowa

Col. H. S. Duncan, auctioneer.

Bids sent to M. T. White, Homestead representative, in care of above breeders, will be properly cared for on sale day.

Protect Your Hogs From Disease!

The Deadly Swine Plague Now Sweeping the Country is Wiping Out Entire Herds in a Few Days

I'll Help You Prevent Your Losses
I'll Get Rid of the Worms in Your Stock
I'll Prove It Sixty Days Before You Pay

NOW is The Time for you to fight the diseases that are robbing farmers and stockmen of millions of dollars.

NOW is The Time for you to put every animal on your place in a strong healthy condition—especially your hogs and little pigs.

NOW is The Time for you to get rid of the deadly stomach and free intestinal worms—the pests that sap the strength and vitality of your farm animals, making them easy victims of cholera and other diseases.

Read these letters. They prove that "a stitch in time saves nine."

"A lot of hogs died in this county from swine plague or cholera. Some of them were within three miles of me, but I have been feeding Sal-Vet, and have not lost a single hog. They are all doing well, eat all I give them and have good appetite for more."—D. A. ROSS, Kingman, Kans., Breeder of Pure Bred Poland Chinas.

"As the hog cholera is prevalent all through this section, I have been feeding Sal-Vet to my hogs. Since then, I never saw them in better condition in spite of the fact that all around me the cholera is carrying them off by the hundreds."
W. J. BROOKS, Diggs, Va.

Hogs ***free from worms*** are best protected against Cholera and Swine Plague and most apt to recover when attacked. Every authority on the breeding and feeding of swine will tell you the same thing. Read the warning by the Editor of the Iowa Homestead in the next column. There is the whole truth in a nutshell. ***Worms are your greatest enemies***—worse than cholera—they are everlastingly stealing your stock profits—weakening your farm animals and keeping them from putting on flesh. And worst of all in times like this when cholera breaks out in your neighborhood, you may lose hundreds of dollars in a few days just because your animals have been robbed of their fighting strength and vitality by ***worms.***

The Great WORM Destroyer

SAL-VET

The Great LIVESTOCK Conditioner

will drive out these pests quick. I'll prove it before you pay—I'll prove it or no pay. I'll prove it on your own farm with the money in ***your pocket.*** Worms can't live where Sal-Vet is used. The dangers of cholera and swine plague are many times ***less*** where Sal-Vet is fed. It is the best kind of cholera insurance you can find. It will put every animal on your place in a thrifty condition. They will gain faster—grow into money quicker and make you more profit. Read my offer and personal guarantee. Then send me the coupon below.

The Editor of the Iowa Homestead Says About Cholera Plague:

We do not desire to place ourselves on record as believing that hogs free from internal parasites cannot take any of these deadly diseases, but on the other hand, we have no hesitation in saying that nine-tenths of the trouble that occurs among hogs is due first to a weakening of the constitutional powers on account of the ravages of worms. Where this is the seat of trouble no system of inoculation or vaccination will for a single day arrest the coming of this profit-destroying scourge, and the lesson to be learned from this is that more attention must be given to the problem of destroying worms while pigs are young if we ever hope to head off these heavy losses or popularize the efficacy of the serum treatment.

Hogs are in the very necessity of the case kept under artificial conditions at the present time. Generally speaking they are confined in relatively small quarters and this is most favorable for the development of parasitic troubles. This being the case we believe that there is not a single set of conditions, under which hogs are kept, found in the grain belt that will justify swine breeders in their failure to administer worm remedies regularly beginning just when the pigs are old enough to take feed from the trough. If a beginning is made then and is kept up at intervals of ten days or two weeks until the pigs are half grown the probabilities are that there will be no more trouble from that source and if worms are eliminated we have no hesitation in saying that nine-tenths of the thumping will be stopped, fever will be almost wholly checked and the way will be paved in an ideal fashion for the so-called serum to accomplish what scientists have proven can be accomplished.

I'll Feed Your Stock Sixty Days Before You Pay

Mr. Sidney R. Feil is a Registered Pharmacist under Ohio State Laws and Graduate of the National Institute of Pharmacy

S. R. FEIL Pres.

If you will fill out the coupon below—tell me how many head of stock you have—mail it to me, I will ship you enough Sal-Vet to last them 60 days. You simply pay the small freight charge when it arrives. Let your stock run to it freely according to directions and at the end of 60 days, report results. If Sal-Vet does not do what I claim, I'll cancel the charge. You won't owe me a cent.

Don't Send Any Money—Just Send the Coupon

Read the letters in the next column. They prove that Sal-Vet will do just what I claim. Be on the safe side. Protect your hogs against disease ***now.*** Don't put it off a day longer. Get rid of the worms in all your stock now. Sal-Vet will do it quickly and easily. You can see the results with your own eyes before you pay me a penny.

Sidney R. Feil, Pres., THE S. R. FEIL COMPANY, Mfg. Chemists
(107) Dept. IH — Cleveland, Ohio

Sidney R. Feil, Pres., The S. R. Feil Co., Cleveland, O.

Ship me enough "Sal-Vet" to last my stock 60 days. I will pay the freight charges when it arrives, report results in 60 days and will then pay for it, if it does what you claim. If it does not, you are to cancel the charge.

Read How Sal-Vet Saves Farm Stock

Before Sal-Vet got here, I employed a veterinary who performed a post-mortem examination on two pigs, one of which had died, and the other we killed. He pronounced the trouble Swine Plague, when I was sure it was worms. Since I have fed Sal-Vet, there has been only one loss and the pigs have since been thrifty and doing well."
G. W. Benedict, Platteville, Wis.

"Enclosed find check for the Sal-Vet received. The reason I had not sent this before was because the Cholera was prevalent all around my neighborhood, and I wanted first to test the preparation thoroughly. Not a single one of my pigs died, and furthermore, they are all looking fine and are in good condition."—E. M. Searcy, Decatur, Ill.

I write to say that I have been a free user of Sal-Vet ever since its introduction and find that it is the most perfect worm exterminator on the market today. It will positively do all that you claim for it. There is nothing within my knowledge as good and reliable or as cheap."—E. C. Stone, Peoria, Ill., Sec. American Hampshire Swine Record Ass., Pres. Illinois Swine Breeders' Association.

My herd of pure bred Poland China hogs were in decidedly bad condition, and I was very much afraid of Cholera, having just returned with them from our state fair, where this disease often crops out. Since feeding Sal-Vet, they are slick, fat and in absolutely perfect health too.
G. M. Curnutt, Montserrat, Mo.

PRICES: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12. Special discount for large quantities.

No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked "Sal-Vet" Packages. 60 day trial shipments are based on one lb. of Sal-Vet for each sheep or hog and 4 lbs. for each horse or head of cattle as near as we can come without breaking regular packages.

VOL. LVIII. NO. 8 DES MOINES, IOWA, FEBRUARY 20, 1913. WHOLE NO. 2889.

THREE GENERATIONS

The young men and women who are today ordering their household goods and farm implements from Montgomery Ward & Company are following in the footsteps of two generations.

The proud boast of this institution is that it has served faithfully three generations of careful, saving people.

Many a young couple who are ordering their weekly or monthly shipment from Montgomery Ward & Company have back of them the spirit of father and grandfather, approvingly urging them in the path of saving.

In 1872 we began the battle to reduce the high cost of living. It was our own private fight forty years ago. It has now become a national issue.

Millions have learned the lessons and profited by them. The great catalogue of Montgomery Ward & Company this year has reached a pinnacle of perfection undreamed of heretofore.

There are bargains on every page. From pins to pianos, from agricultural implements to automobiles, from foods to furniture, and through all the thousands of articles correctly described in word and picture you will find an array of merchandise unequalled in any other collection in the world.

This wonderful book of a thousand pages and ten thousand opportunities to save is yours free for the asking. All you need to do is to write a post card or letter today saying "send on the new catalogue" and it will reach you without a penny of cost or a shadow of obligation. Write today.

DES MOINES, IOWA, THURSDAY FEBRUARY 20, 1913.

STATE AID FOR GOOD ROADS

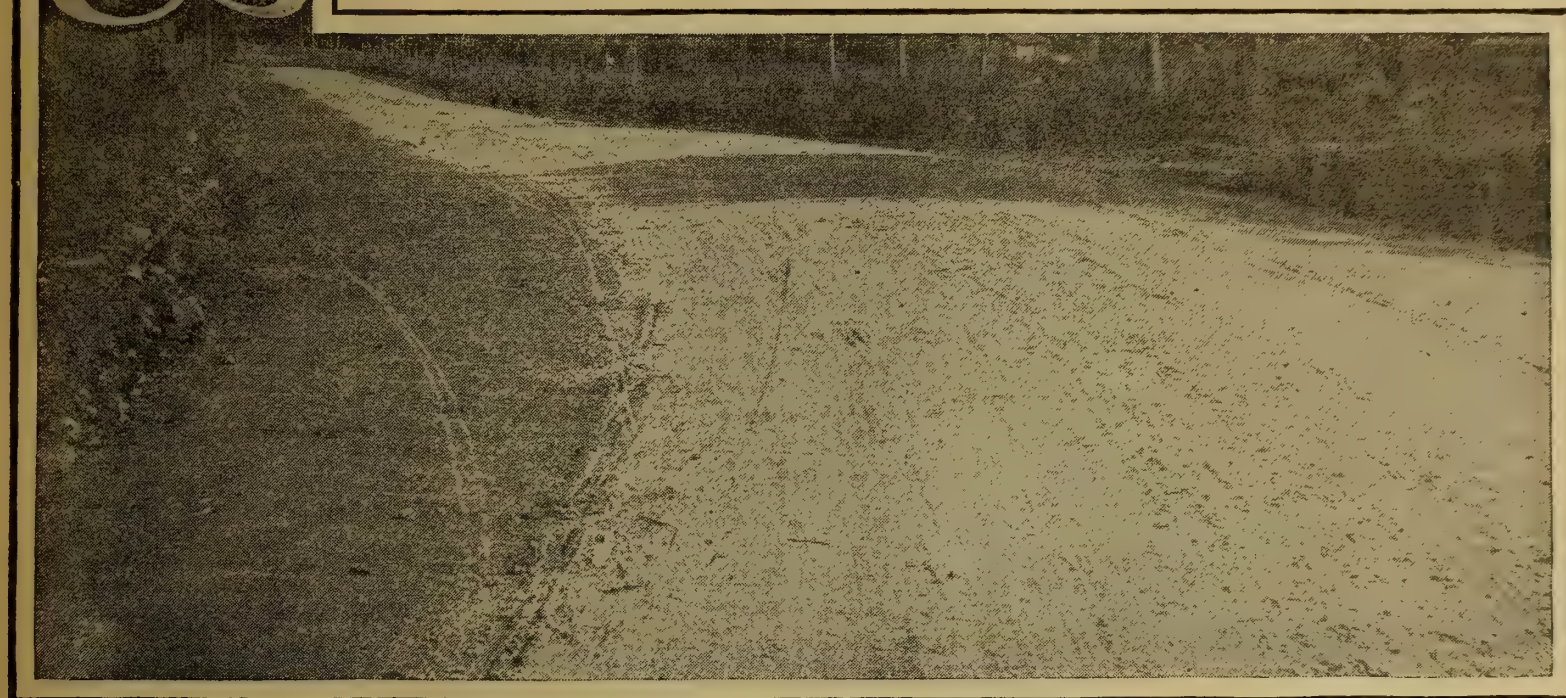
Extent of the Campaign Being Carried on Throughout the Country, with Bond Issuances in a Number of States—the Record of One Year's Work.

"LAWS will not build roads. It takes money." This sage utterance of Curtis Hill, state highway commissioner for Missouri, sounds the keynote of the new campaign which is being carried on, all over the country, for better highways. The past year has seen a greater number of millions appropriated or raised by bond issues for good roads than ever before in the history of the country. "It is my suggestion that the laws be left alone," continued Mr. Hill, "and that efforts be concentrated upon obtaining state money to aid road building; that is the key to the solution of road making and our present greatest need. Any one who knows anything about the subject knows that the principal need is revenue (especially revenue for state aid roads) in an amount that will be effective." That the country is rapidly coming to see the wisdom of Mr. Hill's remarks (he gave them point by proposing a $40,000,000 bond issue for Missouri) and to decide that good roads must be built of something more permanent than enthusiasm and good intentions is evident from the record of the past year and from the campaign well under way for the coming year. A resume of the work of 1912, made at the beginning of the present year, shows that New York heads the states whose legislatures have made liberal appropriations for good roads, adding a $50,000,000 bond issue to its previous appropriation of an equal amount. "Practically as good a showing is assured in Pennsylvania where a proposed $50,000,000 appropriation is pending," continues the report. "In California an $18,000,000 bond issue is now being expended and in Maine a $2,000,000 bond issue has been authorized, to be met by the motor car fees. The defeat of the $50,000,000 bond issue in Ohio is said by the good roads enthusiasts to be the only discouraging feature of the year and they believe it will be reconsidered."

To this excellent showing must be added the good work accomplished in Minnesota, where an amendment to the state constitution providing for a one-mill state tax levy for good roads and authorizing the anticipation of this levy for ten years by a bond issuance, creating a fund of $16,000,000 immediately available, was the only one of five amendments to be carried at the last general election. Inasmuch as it is provided that the benefited counties and property shall contribute a dollar for every dollar expended by the state, a total fund of $32,000,000 is thus made available, sufficient to connect every county seat town in the state (south of a point 100 miles north of St. Paul) with paved roads, the state to pay one-half the expense, the counties one-fourth and the benefited property one-fourth.

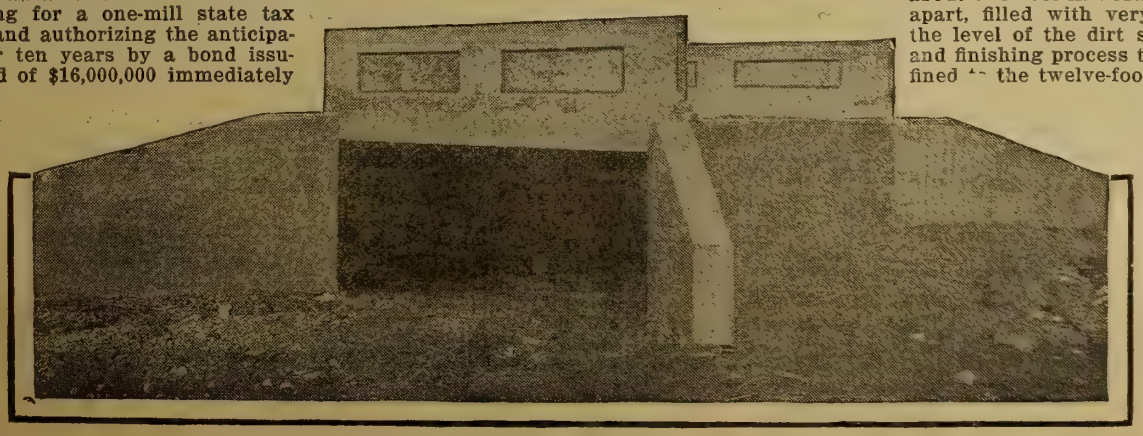
To this list must shortly be added Iowa, if present prospects are realized, the legislature now considering a bill to place practically all road building under the supervision of a state highway commission, possessed of plenary powers and to augment the road funds by a special state road tax of one mill, which would be a burden of only $2 on a quarter section farm and which would give a good working fund of almost a million dollars to start with. Some of the Iowa road enthusiasts are advocating a $25,000,000 bond issue, the interest on the bonds to be paid and the bonds to be retired within twenty years by the one-mill state tax levy and the automobile tax. It is proposed to duplicate the Minnesota plan and by county appropriation and property assessment double the fund, so that $50,000,000 will be available.

That the enthusiasm is contagious is shown by this report from Missouri: "Bonds for building nine miles of rock road in Clay county, between Kansas City and Excelsior Springs, were voted at a special election yesterday by the farmers living between Avondale and Compton's Farm. The road wil cost $65,000 and the work of grading will begin early in the spring. Of the 6,400 acres represented in the district more than 4,000 were voted for the road. The district is the first of the four districts through which the road ultimately will be extended to Excelsior Springs. Of the three remaining districts, two are ready to vote bonds for their share of the work."



A STRETCH OF MODEL HIGHWAY, LINKING TOWN AND COUNTRY TOGETHER.

This road in Clay county is to be sixteen feet wide and is to have seven inches of crushed rock, covered with the best grade of heavy oil. Like the model highway in Marion county, a stretch of road bed that is attracting widespread attention, it was made possible by fund-providing laws which assess not only the adjoining acres, but also those further back, the acre assessments decreasing according to the distance from the road and the benefit derived, descending from a dollar an acre to fifty cents and even less. The road in Marion county is but twelve feet wide, but the layers of stone are ten inehcs deep, first a four-inch layer of one and one-half-inch crushed stone, next a four-inch layer of three-inch crushed stone and over this two inches of screenings from the road crusher. Drainage is provided for by means of cross sections or ditches about two feet in width, at spaces fifty feet apart, filled with very coarse rock up to the level of the dirt surface. In the final and finishing process the rolling is not confined to the twelve-foot width of macadam, but laps over onto the shoulder and dirt road adjoining, which is made into a hard, well-packed road on each side of the rock strip, in the exact center of the right of way.



TYPE OF THE PERMANENT CULVERT COMING INTO POPULARITY.

But the model highways in Clay and Marion counties do not comprise all the year's achievements for

(Concluded on page 14.)

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

A PROMPT RECOVERY.

The work of rebuilding the partially burned Homestead plant is progressing steadily, so that already (only a fortnight since the flames wrought their destruction) the building is once more enclosed, with evidences of restored order appearing where chaos once greeted the eyes. Within a month or six weeks the building will be in as good condition as formerly, while not far in the future our plans and hopes look forward to a new home, to be completed before the first snow falls next winter.

While the work of rebuilding has been in progress, we have not been idle in the equally important matter of restoring all mechanical departments to their former condition. Already $60,000 worth of the latest and most improved machinery and the best and most artistic type procurable have been ordered, much of it being already shipped, to be installed immediately upon its arrival. Within a month or two the mechanical equipment of The Homestead plant will once more be without an equal in the middle West and we shall again be in a position to give our patrons and subscribers the advantages which can be obtained only in a printing shop up to the minute in the matter of mechanical aids to skilful mechanics.

In making these announcements I am not moved by any spirit of boastfulness because of our prompt recovery from what seemed at first to be a crushing blow, but I am moved, rather, by a spirit of thankfulness that all this has been made possible, largely through the co-operation of friends, both here at home and throughout the entire country. "A friend in need is a friend indeed" runs the old adage and I am prepared to testify to its truthfulness and aptness in the present situation. The cheering and comforting letters received from hundreds of friends have brought consolation and encouragement, reviving waning spirits and stimulating further and greater efforts. I shall never forget the kindness of the many, many friends whom this recent disaster has disclosed to me, in number and sincerity beyond my fondest hopes or dreams.

With the day now not far distant when the last vestige of the flame's destruction will have vanished, I renew my promises of even greater effort in the future to deserve the friendly assistance and kindly feeling which have been manifested so generously in the past fortnight.

Most sincerely yours,

James M. Pierce,
Publisher The Iowa Homestead.

A SAD LOSS.

As we go to press, the sad news comes from Maryville, Mo., of the death of George P. Bellows, one of the best known and best loved of all the stock breeders of the country. The lifeless body of Colonel Bellows was found under his automobile, at the edge of a bridge, Monday afternoon. The accident which snuffed out a life which had no equal for usefulness, integrity and uprightness was witnessed by no one. Only the dead body of the man who but a half hour before had been in the very prime of his endeavors mutely testified to the tragedy the news of which brings so much sorrow to so many hearts.

Colonel Bellows was a man whom to know was to love. His career is one of the prides of his state and of the entire grain belt. Active, industrious, practical, thrifty, practicing the square deal in every act of life, he leaves behind him the heritage of an untarnished career and the memory of a noble life gallantly lived. His death comes as a particularly sad blow to The Iowa Homestead, for Colonel Bellows was associated with this paper, in the capacity of a field man for eleven years, from 1893 to 1904, leaving The Iowa Homestead to enter upon his career as a live stock auctioneer. The loyalty, industry and perseverance, with which every day of the eleven years spent by Colonel Bellows with this paper were filled to overflowing, are an inspiration and a guidance to this day and will never be forgotten. The publisher of The Iowa Homestead will attend Colonel Bellows' funeral and will pay a personal tribute to the memory of his late and beloved friend in next week's paper.

PAPERS ALL PRACTICAL.

Nothing is more important than good, practical reading for the whole family. The publisher of The Iowa Homestead personally reads and recommends the four splendid papers which he offers in combination with The Iowa Homestead in the 1913 Red Letter Subscription Offer. They are all dependable and practical, leaders in their class. The offer is an exceptionally good one. Remit $1.25 today to The Iowa Homestead, Des Moines, Iowa, and the five following papers will be sent you one entire year: The Iowa Homestead, Kimball's Dairy Farmer, The Woman's World, Kansas City Weekly Star and People's Popular Monthly. This is almost one-half the regular price and the best chance we know of for a year's good reading at such a low price.

CORN, CLOVER AND COWS.

In any country where corn and the clovers will grow, there you will find the possibility of improved agriculture. What we mean by improved agriculture is the raising of the largest possible crops with the least possible waste of soil fertility. No country can waste its resources and continue to prosper any more than a young man can prosper who spends more than his income.

Nature is not an inexhaustible storehouse which may be looted with impunity by every freebooter who calls himself a farmer. There will be a day of reckoning. Any system of agriculture that doesn't conserve the fertility of the soil on which agriculture depends is all the time drawing on the bank of nature, and in the end the drafts will be dishonored.

The farm practice which is all too common in the middle West is to change the crops from corn to some kind of small grain, and then sow timothy, all soil robbers, each one appropriating some valuable element that is seldom replaced in any adequate measure.

Conservation of soil fertility means more than a few loads of manure scattered in a hap-hazard sort of way, for such farmers seldom keep stock enough to thoroughly enrich any one field.

Corn is the staple crop, and it will be and should be planted in excess of any other. But corn after corn with an occasional change to some other exhaustive crop will not always pay. There must be a proper and systematic rotation which means more than a change of crop. One or more of the clovers, that strike their roots deep into the subsoil, pumping up buried treasures, and that reach up into the air for passing elements which the other crops are not able to appropriate but need, these are the plants that are depositing in the bank upon which the farmer must draw. That bank will not fail.

One other thing is needful to make a perfect rotation possible. Crops must not be removed from the farm on wheels. Every load of grain or hay taken to market removes a certain number of pounds of the very fertility which made it possible to raise the crop, and if the practice be continued long enough someone will go into bankruptcy or buy commercial fertilizers to replace what has been carried away, just as the farmers of the eastern states are now compelled to do. They wasted their substance in riotous farming and the sons are now living on the husks of their fathers' mistakes. In some states whole bulletins are devoted to the discussion of chemical fertilizers.

Crops must be largely consumed on the farm, and marketed only in the finished product. Live stock must, therefore, enter into the system of crop rotation. The crop that walks to market or slips through the creamery carries away less of the farmer's real bankable value, the soil, than if it rides to the elevator or haypress.

The cow is the handmaid of prosperity. She is the helpmate of every one who espouses her. She is faithful to her employer and generous toward her lover. She brings a dowry of good works, and leaves behind her a wealth of blessing, an inheritance of conserved resources.

The future of corn-belt agriculture depends on the present generation. If we learn from the object lessons of wornout soils where once flourished a prosperous, but thoughtless husbandry, and if we are able to profit by the examples of English and German far-seeing practices we may escape the penalty that overtakes less intelligent peoples who robbed posterity by wasteful methods.

Clover, corn, cows, these three, a trinity of practical virtues that mean putting off the day of bankruptcy for the middle West farmer so long as they are intelligently applied.

Other practices will suggest themselves, but these are a good foundation for good farming.

EXPERIENCE IN USING FORMALIN FOR SMUT.

A South Dakota subscriber, A. H. Sich, gives his experience in destroying smut on various kinds of grain in the following communication:

In a recent issue of this paper you recommended using one pound of formalin in forty gallons of water, to destroy smut on oats. I have for four or five seasons treated oats as recommended by you and different experiment stations, but without success, and last season I used one pound of formalin to twenty-five gallons of water, treating twenty-five bushels with it, which had the desired effect. According to this I think the mixture you advise is not strong enough. I am using the same amount for beardless barley, using one gallon for every bushel of the above grains treated, but for wheat I have found that one pound to forty gallons of water is plenty strong. I use a wagon box to handle the grain, treating half a box full at a time. Am using a common garden sprinkler and taking care that every bushel is moistened by working the grain from one end of the wagon box to the other three times, wetting it as it is worked over, and then it is piled up in one end and covered with sacks or blankets for four or five hours. After this length of time has elapsed I remove the covering and shovel it over a few times to hasten its drying and it is ready to sow, but the seeder has to be opened a little farther on account of the seeds being swollen.

We believe that in some instances advice about sprinkling seed with a mixture of formalin and water has been wrongly interpreted and as a result the grain has not been made sufficiently wet to bring about the complete destruction of the smut spores. It is very natural to suppose that where the sprinkling method is employed a stronger solution would be required in the case of oats because there is a much better opportunity for the spores to remain immune from attack in the hull of oat grain than in the case of either barley or wheat. While this paper has frequently recommended the sprinkling system we have always advised pouring on the liquid until the grain has become thoroughly soaked and until the water seeps away on the sides, but as there seems to be some instances where this plan does not always prove effective as indicated by the results obtained by Mr. Sich, we believe that in the end it is better to immerse the seed there and then. In experiments conducted at the Ontario station the very best results were obtained by the immersion system which simply means putting the grain absolutely into the mixture of water and formalin in which case it has been proven that one pound of formalin to forty gallons of water answers every need.

MODEL RURAL SCHOOLS.

A model rural school at Kirksville, Mo., is serving as an object lesson in possibilities. Indoor toilets and shower baths, drinking fountains and a modern heating plant are shown to be possible in the country school, however remote from the city. A correspondent sends us this description of conditions:

The Kirksville school is conspicuous for its utilization of every available inch of space. It is only a one-story building, slightly wider than the typical Missouri country school, but the attic and basement are both put to valuable use. The attic is employed for manual training and domestic science, and there is an excellent herbarium. The basement contains the heating plant, a combination of hot water and hot air, described as very economical in use; the fuel room; a bulb room for the outdoor garden, and a dark room for developing photographs.

The machinery of the school plant consists of an ordinary pneumatic pressure tank, operated by a gasoline engine. A septic-tank sewer system is maintained at small expense.

The main floor of the building, besides containing the class room proper, has a small community library, separate from the school library, emphasizing the purpose of the rural school as a community center. The class room itself occupies most of the floor. The desk and seats in it are both adjustable and movable, with individual platforms, and when all are removed to one side as many as 200 people can be accommodated, thus making it possible to use the room for community gatherings. The stereopticon in the wall of the class room emphasizes still further the fact that this school is built for general community use as well as for ordinary school purposes.

Every effort has been made to have the model rural school at Kirksville approximate actual rural conditions. Although located on the campus at the Kirksville Normal School, it is detached from the other buildings. The pupils are real rural material. Every morning a transportation wagon brings in thirty-four country children from a distance of five miles. No town children are allowed to attend, because it is distinctly a rural school. An expert rural teacher is in charge and the school she conducts is an observation school. Candidates for rural school certificates attend it at least once a day and observe her work, and after two years of training in the normal school they receive practice work in the school.

Country children who go out from such a school are not only better educated and equipped to carry on the active work of the farm, but they are better contented to remain on the farm. Such a school shows the possibilities of farm life, the extent to which it may be filled with comforts equally with city life. And the best of it all is that all these advantages mean but little additional expense, according to the Kirksville reports. The cost is said to be within the reach of a comparatively small community. After all, the margin between doing a thing in a haphazard, systemless manner and doing it in a thorough and systematic manner is small. A few more dollars added to the original investiment bring results far reaching in their effect and importance.

The farmer who jumps into his wet ground in the spring just to get ahead of his neighbor, cannot form a good seed bed; his soil will pack before it can be pulverized and leveled, and his land will be irreparably damaged by such management.

FALL SOWING OF ALFALFA ADVISED.

A sub criber, Dorman Trisler, asks for information concerning the establishment of an alfalfa field. He is contemplating sowing a few acres in the spring and desires to know if it is advisable to use a nurse crop or not and asks further concerning the depth to which a soil should be plowed and for general information concerning the preparation of the seed bed.

It is much easier to make a blunder by attempting to sow alfalfa in the spring than by seeding in the fall. A decade ago there was very little alfalfa seeded in the fall in the corn belt, but year by year farmers are switching over and there is without doubt good reason for the change.

One of the main reasons why it is advisable to sow in the fall rather than in the spring is that under ordinary circumstances annual weeds offer a tremendous amount of opposition to the spring and summer growth of a crop like alfalfa. It means that to keep the weeds in check frequent cuttings must be resorted to and in case the alfalfa is healthy there is a substantial objection to cutting it short at the very time when some top is needed in order to insure rapid root growth. Where a nurse crop is used weeds are kept in check more effectively, but on the other hand, the nurse crop also dries the soil out to such an extent that the young alfalfa plants suffer when the crop that shades it is removed. Other reasons might be given in favor of the plan of fall sowing, but these are the main and important ones. Where the crop is sown about the middle of August on a well-prepared seed bed such annual weed seeds as germinate in the fall only make a comparatively small growth and they are gone forever so that the alfalfa starts very early the following spring and in most cases keeps ahead of weed growth. If conditions are at all favorable a good cutting or two is often obtained the first year when this plan is adopted and a much better stand from the beginning will be insured than car be expected from the spring sowing.

In some instances it may be advisable where it is the intention to sow alfalfa to lose the use of the ground for that season by keeping the soil stirred on the surface from time to time through the spring and summer months. If the ground was not fall plowed it should be plowed just as soon as possible in the spring and as said before, surface kept stirred in order to conserve moisture and rid the land of weeds. This is possibly the most ideal method of preparing a seed bed for alfalfa. However, those who feel that they cannot give up the use of the ground for a year might be able to grow a crop of small grain after which the ground should be plowed to a fair depth and thoroughly cultivated so as to get the soil into almost a garden condition by the middle of August at which time the alfalfa seed should be sown. If manure can be added to the stubble land after removing the grain crop so much the better.

CO-OPERATION THAT COUNTS.

The campaign to enhance the efficiency and add to the appeal of the rural school is already bearing results. Not the least interesting report is that which comes from a community in Iowa where the girls attending the rural school are having the earnest co-operation of their mothers. Determined that their daughters shall have the advantage of instruction in scientific cooking the mothers have purchased a large gasoline stove, with the necessary kitchen equipment, and with their daughters are spending several hours at the school each week, cooking and preparing special dishes under the supervision of the highly efficient teacher in charge.

In this connection a report made by the teacher of another rural school in the grain belt, showing the success of her plan to serve hot noonday lunches, prepared by the pupils themselves, is of interest and value:

As to the hot lunch, this was not tried last year, so after I had taken the work at the normal school I decided last fall to try it in my school. We gave a social and raised a little money and with it I bought a good two-burner oil stove, a dishpan, a large soup kettle, a tea kettle, a soup ladle, a dozen spoons and two and one-half yards of white oilcloth for desk covers and some salt and other stock materials at a total cost of $11.30. I then made out a list of material the children could bring to make the hot lunch for each day. All responded readily and we began. We have soup four days and on Fridays we have a cup of cocoa. The children like it much and we would not think of going back to the old plan of the cold lunch.

I start the fire about eleven o'clock and two of the girls quickly make the soup and put it on and it is all ready by twelve o'clock. One child acts as waiter and another with the ladle dips out the soup, while the others quietly wait at their desks to be served.

After dinner each child carries his soiled dish to the wash table and two of the children wash and put away the dishes. There is no trouble whatever in getting the work done. The children really enjoy it and it takes no time from the regular work. Lately one of the neighbor girls not attending school came to visit us and, much to our surprise and delight, at noon hour surprised us with a fine chicken dinner she had brought with her all ready to serve. There was some objection to the hot lunch at first on the part of some parents, but they have been reasonable about it and I think now all are supporting it well. I am sure the people as a whole in the district feel it has been a fine thing and are glad to support it in every way.

A recent meeting of one of the neighborhood farm clubs, so numerous in the grain belt nowadays, discussed the rural school problem at length, the consensus of opinion being that the condition of the country schoolhouses is not as homelike and up to date as it should be. The meeting was not adjourned until it had been decided to add a telephone to the school room, so as to place the pupils and the teacher in easy communication with their homes and friends. The rural school of tomorrow thus equipped, together with renewed interest in the work brought about by the making more practical of the courses of study and the widening of the appeal, cannot help but be more efficient and a bigger factor in farm improvement than ever before.

ONE WAY TO WASTE MANURE.

An Iowa subscriber calls attention to the waste that sometimes takes place when farm yard manure is placed on rolling land at a time when the ground is frozen. Among other things he says:

It has been quite a problem with us whether to draw out manure as fast as it is made in the winter season or to store it and haul it in the spring after the snow is gone.

There are some things to be said on both sides of the question. A few years ago, on a trip across the country, I saw tons of good manure going down to the ocean in the month of February when there had been a long rain and the snow was going off with a rush. The farmers of that section had hauled their manure out as it was made and left it in little heaps all over the land that was to be cropped the following season; but they were surely losing a good share of the goodness of their fertilizer. It would not even so much as give the water of the river a reddish cast anywhere. It was lost and gone.

Every winter the same thing happens all over the country, especially where the land is inclined to be hilly and manure is spread on it while the earth is frozen hard. It stands to reason that this should be so. The manure cannot get into the earth; it is locked out by the frost. The only way it can go is the way the hill slopes. And that is not a very profitable way for the man who owns the land.

Seems to me, then, that if a man has a hilly farm he had better wait until spring before drawing out his manure. Where the land is comparatively level or only rolling a little it will do to spread the manure out in winter. Then it will lie there till the warm sunshine unlocks the earth and lets it down in to enrich the soil.

I know how much it furthers farm operations to be able to do this work in winter when other work does not crowd. It is no small job to haul out the manure for a big dairy of cows or a lot of stock anyhow. I never have been more tired in all my life than when doing this work day after day. It is hard and heavy work, especially if we do not have a spreader. But, after all, what do we need the fertilizer for, if not to give us better crops and to maintain the goodness of our farms?

The conclusion is, then, that every man must settle the question for himself. Theory is good; actual experience better. "Let every man be fully persuaded in his own mind."

This is a matter about which one can easily be deceived. The flow of colored water from fields that have been manured during the winter months does not necessarily mean the waste of much fertility. This is due to the fact that until manure becomes incorporated with the soil conditions are not favorable to the conversion of plant food into soluble form and that being the case ordinary rains cannot dissolve the fertility and, therefore, it is not lost in any considerable quantity. We cannot help but think that the practice of getting manure to the fields as soon as possible after it is made under nearly all conditions is based on good sense, and while as this subscriber points out it may seem as if it sometimes results in large waste, yet after all we believe that the waste is more than made up by the work being done at a time when labor is slack. It must be borne in mind that if the manure is left in the yard conditions for bringing about waste are ideal, the loss in this case being very largely in the form of nitrogen—the most expensive element of plant food. This is a factor that must be considered in comparing the plan of hauling the manure to the field during the winter and that of leaving it in the yard to be hauled during the spring or summer.

FERTILIZING GRASS LAND.

An Illinois subscriber brings up the question of retaining the fertility on rolling land and recommends that such soils be kept in grass continuously. On this subject he says:

After over twenty-five years' experience in farming I have come to the conclusion that it is best to keep hilly land in grass most of the years. Either timothy or blue grass is good. Clover is not bad, but it will not stick so well as either of the other two. By keeping the hilly ground sodded there will be but little if any washing of the soil. This preserves the appearance of the land and maintains its fertility.

I have seen many acres of hilly land cut to pieces with deep washes and practically void of fertile soil. This land was cultivated year after year and the top or fertile soil washed away down the ravine and left a poor clay instead. When it is positively necessary to cultivate the hilly land it should be plowed carefully. Never break it up and down the hill, but plow around the hill and keep the soil as level as possible. Plant the crop and get it to growing as quickly as possible after breaking. If washes start by heavy rains, drive stakes across them and throw in brush or straw and get them stopped as quickly as possible. Never cultivate the hilly ground more than two years. Put it right back to grass as soon as possible. I know many farmers who have prospered on hilly farms by thus caring for their soil. The low land is the land that should be cultivated, for its fertility can be kept up by manure and rotation.

In some instances grass on the bare hills becomes thinner and thinner thus giving rise to the seeming necessity of plowing it up so as to get a fresh start. In such cases a much better plan involves the use of a little more seed and such fertilizer as is available. Three quarts of clover seed per acre well harrowed or disked in early in the spring will do two things. In the first place it will add to the richness of the pasture and secondly it will greatly benefit the soil. If in turn some of the clover can be allowed to go to seed it will still further thicken the growth. If in addition to this a few loads of farm yard manure can be spread thinly on every acre the result will be a tremendous increase in the yield and in the end rolling land will be much more productive from this kind of treatment than will be the case if it is plowed up and an attempt made to get a new start in establishing grass.

A WORD FOR THE GASOLINE ENGINE.

The following communication comes from a man who has been more than ordinarily successful in his farm affairs. While there might be many reasons for this success yet we apprehend that one important factor has been the use and employment of modern machinery to take the place of man power. About the gasoline engine he says:

I am thinking now of the gasoline engine. How could we get along without it? A few years ago we had to do our work without the help of this most useful farm machine. It was a long, tedious job, for example, to get up the wood for the coming year. Took about all winter to do what we can now do in a short time after the logs have been cut and skidded up.

And then there is the work of pumping water. We have a deep drilled well. In a dry time this is our only source of supply for the horses and a big herd of cattle. It used to be a hard and a long job to pump water enough for so much stock by hand. Now we set the engine to work and the rest is easy. A few cents' worth of gasoline will do a whole day's work.

And we have found our engine a source of help not only on our own farm, but also on the farms of neighbors who have none. The boys, too, earn quite a speck of money in the winter season by taking little wood jobs around the neighborhood. It helps the folks out and gives us something profitable to do when the hands would otherwise be doing little except the chores.

In the fall, when it comes to filling the silo, we have found the engine a source of great help. By changing work we can get the silo job done at comparatively light expense. Still another good thing about it is that we can usually get this work done when it ought to be done, instead of having to wait the notion of some man who makes a business of filling silos, and who may be days behind the frost, which is never a respecter of persons, but comes when it has a mind to, whether the corn is cut or not.

But the expense! We can't afford it. Can we afford not to have the tools necessary to enable us to do our farm work promptly and on time? Is it not really a life-saving thing, too, to have machinery to take the place of man or horse power? Anything that will help us to do what must be done in season and at a great saving of life and strength certainly seems to me well worth while. After you once get an engine the expense of upkeep is small, compared to what we get out of it. Then, too, fewer horses will have to be kept if we are equipped with a good engine and the necessary adjuncts.

It would be difficult to prove just which farm implement or piece of machinery has proven to be the greatest labor saver for the farmer. Comparison, however, is not necessary because one implement saves labor in a particular direction while another multiplies the farmer's working ability in a different direction. When it comes to the saving of such hard, grinding toil as is involved in the pumping of water, sawing of wood and tasks of that kind the gasoline engine must be held in highest esteem. However, it is not enough that a piece of farm equipment should save labor unless in so doing it multiplies the farmer's earning power and from this standpoint the gasoline engine is doing its full share. In the grinding of grain, filling the silo, shelling corn and such heavy tasks as these a good engine on the average farm ought to pay for itself the first year.

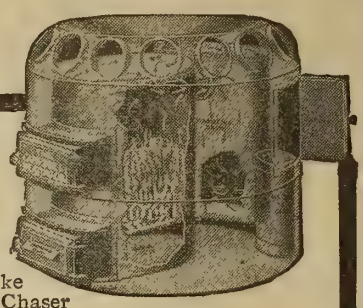
IMPORTATION OF BREEDING ANIMALS.

There were more pure-bred Percheron stallions and mares imported into the United States in 1912 than there were representatives of all other breeds put together. G. Arthur Bell, acting chief of the animal husbandry division of the United States Department of Agriculture, has furnished this paper with a complete summary of the 1912 cattle and horse importations to this country. His records show that the importations from France, Belgium, Scotland and other horse-producing countries totaled for the year 3,419 of which number 1,946 were Percherons, 939 were Belgians, 243 Shires, 101 Welsh ponies, eighty-seven Clydesdales, thirty-one Shetland ponies, twenty-six Hackneys and twenty-five Suffolks. Of the eighty-seven Clydesdales, twenty-four were imported from Canada and of the ten thoroughbreds seven were imported from the Dominion and the three standard breds were sent in from that country.

Although there were no Alderneys, Guernseys and Jerseys imported into the states after the early part of May owing to the presence of foot and mouth disease in Great Britain the totals of these three breeds were relatively and satisfactorily high. In all 1,616 head of cattle were shipped to America's ports during the year just ended. By far the larger number were Guernseys and Alderneys. The totals of these closely related breeds amounted to 641. The Island of Jersey stood second to these noted Channel Island breeds in the number of exportations to this country, there being 439 Jerseys shipped during the twelve months. Greatly increased by Badger state importations the number of Ayrshires amounted to 387, which is a high record for this noted Scotch breed. The eight Holsteins received at our ports were all shipped from Canada and not, as might naturally be supposed, from Holland where the breed had its origin.

Where thick weeds and grass are allowed to cover the ground in the orchard, it will furnish the mice and other troublesome pests a fine harbor, thus increasing your orchard troubles and decreasing your profits.

This Is the One and Only Furnace Manufactured Today That Is Absolutely Guaranteed To Heat Every Room To 70 Degrees Even In the Coldest Weather



I have a very interesting book about this furnace, Mr. Coal Buyer, and I would like to send it to *you* right away, and show you how you can actually save one-third on your fuel bill this winter.

I would like to show you just exactly what I have shown thousands of other dissatisfied land owners and home-owners. I would like to absolutely *prove* to you that this Winter Chaser furnace of mine is the most economical and even heater manufactured today.

I have been in the furnace manufacturing business now for thirty years and have something here to offer you that is really the best thing your money can buy in the heating line. There are many reasons why my

Campbell's Guaranteed Winter Chaser Furnace

is the biggest saver of coal bills of any heater in the world. The large firepot which permits slow combustion, is one of the biggest points. The patent heat retainer is another—the fact that our furnace is gas tight and constructed of the very heavy steel plate is another point—the big air chamber is another.

These points and many others that I want to tell you about personally, make my Winter Chaser the biggest saver of dollars and cents on the coal bills that has ever been manufactured, and put within the reach of every man's pocketbook.

But economy is not the only point. My Winter Chaser is so constructed of 3-16-inch steel plate that it's the most durable and lasting furnace on the market—many of them have been in homes for more than 25 years and are today giving just as perfect heating as they did when they were first installed!

My Winter Chaser cannot possibly freeze and burst. It burns *anything*—it's the quickest heating furnace on the market today—its proper heating arrangement of pipes is just another item that cuts down on Mr. Coal Man's profit—you have pure, sweet, clean, moist air in every room in the house twenty-four hours of every day—you have warm floors with every register in the right place, and all in all, the most healthful kind of heat that can be produced.

Just Write Me Today for My Free Book--Learn How to Save One-Third of Your Coal Bill!

Please don't put this matter off—don't overlook such a guaranteed offer as this one of mine. And when I say *guaranteed* I mean every word of it. I guarantee this Winter Chaser of mine to heat every room in your house—whether it be a twelve room mansion, or a three room cottage—to 70 degrees in even the most severe weather. I guarantee it to produce the cleanest, most perfectly moist heat for you at the *least possible cost*. Just drop me a postal or letter today asking me for this free book "Twice a Day," and I will send it to you by return mail. It will be a most profitable move on your part. Address me personally.

A. K. CAMPBELL, President

Campbell Heating Company

1213 Walnut Street Des Moines, Iowa

Two Grain Books FREE!—

New Superior Grain Grader INSURES 20% BIGGER Grain Profits

Guaranteed by Us

Have you ever thought about the *extra profits* you could be enjoying by cleaning and grading your wheat, oats, flax, barley, rye, timothy, and clover? Did you know that frequently farmers add 20 per cent or more to their grain returns by the use of the New Superior Grain Grader? Well, it's a fact. Cold figures in our free books show $59.30 saved on ten acres of wheat besides paying for the machine.

You know that good seed costs money when you buy it from your neighbor. A New Superior will sift and clean the seed—right out of your own crop—at a mere fraction of what the seed man asks. And good seed is the first step toward bumper crops.

Besides getting bigger crops you get top-notch prices. Your grain goes to the elevator *clean*—free from all foul matter—no weed or grass seed. And therefore no dockage. Besides you've *saved the screenings*—good feed for your cattle.

Go to your dealer's—see the New Superior. Study the automatic adjustable feed, the 12 sieves and screens, the big capacity hopper, the large drive wheel, *double bagger*. A twelve-year-old boy can use the New Superior *easily*. And this great machine now on special offer.

$2.50 for this Coupon at Your Dealer's

Yes, $2.50 sliced right off the price. We want to attract the attention of every progressive farmer! We want every grain-raiser to *know* what the New Superior Grain Grader is! We'll make the same $2.50 offer on the Owen's Smut Cleaner. If you'll take the coupon to your dealer, he'll pay you $2.50 on either machine. And that's only the beginning of what you'll save. It's not uncommon for a New Superior to net hundreds of dollars per year for owners.

We *guarantee* Graders and Smut Machines. Your dealer will take care of you. *So cut out that coupon without delay.* Keep it in your pocket book so it will be handy the next time you're in town when you can talk it over with the dealer.

Books on Grain Profits—Free!

for just your request on a postal. You need the *facts* in these books. Maybe you haven't realized all you were losing on grain. Better find out—it costs you only one cent. Mail the postal today.

J. L. Owens Company
22 Chamber of Commerce Bldg. Minneapolis, Minn.

J. L. Owens Co., 22 Chamber of Commerce Bldg., Minneapolis, Minn., agrees to take this coupon as $2.50 in part cash payment on either the Owens' Grain Grader and Cleaner, or the Owens' Smut Cleaner. If there is no Owens' dealer in the locality, mail coupon to our office in Minneapolis and we will honor it and make arrangements to ship a machine direct.

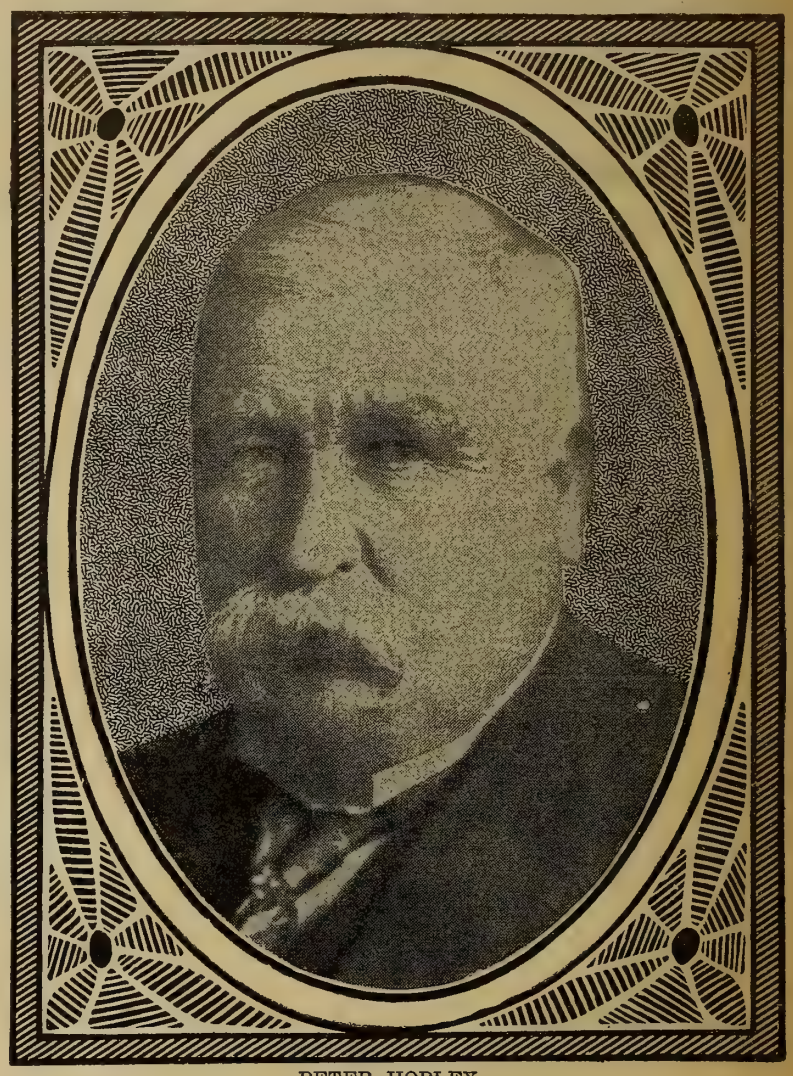
Stockmen Sketches

NEW men connected with corn-belt agriculture have attained to a more distinguished position as a farmer, as a cattleman and as horse breeder and importer than has been attained by Mr. Peter Hopley, of Lewis, Iowa. He might properly be called the "grazier king" of his adopted state with his 1,200 or 1,500 head of cattle distributed over his 1,800 acres of land. It is no uncommon thing for the firm of Peter Hopley & Son to market a thousand hogs of their own raising in a twelve-month period. While the average man is uttering loud lamentations over his trouble in getting help to raise sixty or eighty acres of corn, the Hopley farms are going right on raising 400 or 500 acres of corn annually.



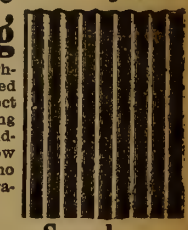
PETER HOPLEY.

In 1846 Mr. Hopley with his parents located in Iowa. As a young man he was smitten with the gold fever and went West and for a time acted in the capacity of foreman for the Adams Express Company on their trail from Denver to Deadwood. With characteristic thrift and foresight Mr. Hopley saved his pennies, returned to Iowa and began laying the foundation of a great name and a splendid fortune in the Botna Valley of the Hawkeye state. In his personal characteristics Mr. Hopley combines in a remarkable degree common sense, untiring energy and force of character. In the part he has taken in corn-belt agriculture his career in a very marked manner resembles that of Captain Barclay, the great Scottish farmer, of whom it was said: "No man deserved better of the farmers of Scotland." Like the Captain, Mr. Hopley is one not to be forgotten by anyone who has once met him.

The growth of the draft horse industry of the United States owes much to the part taken by Mr. Hopley as an importer during the last thirty years. In the early eighties he began bringing over good Clydesdales and with the exception of a short break in the nineties when there was no demand for good horses he has been one of America's largest importers of Percherons and Belgian horses. Being a superior judge of the horse department. His record as a steer feeder alone would make him a marked man in the agricultural activities of the central West. The firm at the present time consists of father and son, the former in the very prime of senior manhood and the latter a full-fledged farmer and stockman, first by instinct and also because of the remarkable opportunities found in his environment to acquire an intimate knowledge of farming and live stock breeding and feeding.

Save 25% on your Roofing

Our high-class, thoroughly galvanized corrugated steel roofing is sold direct from factory at big saving to you. Protect your buildings from lightning at low cost. Easily applied, no repairs. Deep corrugations insure durability.



Send For Free Sample

THE HOME MAKER

Get Your Canadian Home *from the* Canadian Pacific

WE WILL make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

This offer is directed only to farmers or to men who will actually occupy or improve the land.

Why not go where you can own 10 acres for every acre you own or farm here; where *every* acre will produce *double* what a worn-out acre produces anywhere?

Not on the face of Mother Earth can you find better land than this rich virgin Canadian soil. The enormous crop yield per acre *proves* this every season.

We Give You 20 Years to Pay

We will sell you rich Canadian land for from $11 to $30 per acre. You need pay only *one-twentieth down. Think of it*—only *one-twentieth* down, and then twenty years to pay the balance. Long before your final payment comes due your farm will have paid for itself over and over again. Many good farmers in Western Canada have paid for their farms with one crop.

Here are some of the startling features of the most remarkable land offer you have ever read:

We Lend You $2,000 for Farm Improvements

An offer of a $2,000 loan for farm development, with no other security than the land itself, *guarantees our confidence* in the fertility of the soil and in your ability to make it produce prosperity for you and traffic for our lines.

The $2,000 cash loan will help you in erecting your buildings and making things easier the first few years, and you are given 20 years in which to fully repay this loan. While enjoying the use of this money you pay only the banking interest of 6 per cent.

Live stock and poultry with which to equip your farm—best that money can buy—will be supplied you at actual cost.

If you do not want to wait until you can complete your own buildings, dig your well and cultivate and fence your farm—if you want this work all done for you before you start for Canada—select one of our Ready-Made Farms—with home and buildings complete, land cultivated and in crop, *ready for you* and pay for it in 20 years.

We give *free* service—expert advice—the valuable assistance of great demonstration farms, in charge of agricultural specialists employed by the Canadian Pacific for its own farms. This service is *yours—free*.

This Great Offer is Based on *Good Land*

The Canadian Pacific offers you the finest land on earth for grain growing, cattle, hog, sheep and horse raising, dairying, poultry, vegetables and general mixed farming—irrigated lands for intensive farming—non-irrigated lands with ample rainfall for mixed and grain farming. **Remember, these lands are located on or near established lines of railway, near established towns.**

Your new home and your fortune are ready for you in the famous, fertile Canadian West, with its magnificent soil, good climate, churches, public schools, good markets, good hotels, unexcelled transportation—*and 20 years in which to pay for your farm and repay the improvement loan.*

Here is the Last Best West—where *your* opportunity lies. Don't delay. Mail the coupon here at once. The best land will be taken first—so time is precious to you. *Write today.*

Hog losses by disease last year amounted to nearly $50,000,000.00—nearly twice as great as in any otner of the last ten years. Your neighbors right and left have been losing their hogs. If yours are ailing today, look out for tomorrow. Death is in the air and it will **rob you of your best profit maker.**

The trouble is not Hog Cholera, but worms. No hog dies of disease that hasn't got worms. **WORMS really kill 90% of all hogs that die. COLUMBIAN STOCK POWDER** positively expels and destroys worms and **prevents** hog losses. If your hogs are sick it will **save** them. If they are well it will **Keep** them thrifty and safe. Costs you **only a few cents per head a month to feed.**

AGENTS WANTED
We have an interesting money-making proposition for men of ability and good standing in every community. Write for particulars, giving references, TODAY.

Columbian is the original stock powder—**the only sure remedy;** used and endorsed by thousands of leading **stock raisers.**

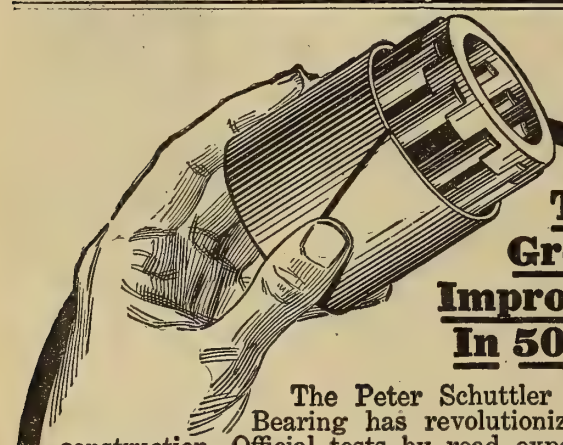
NOT A FOOD, but a medicated preparation, scientifically compounded to expel worms and **Keep hogs healthy.** Restores their digestive powers; makes them grow faster and fatten on 25% **less feed.** Stops thumps, scours, coughing, fever, indigestion, and prevents all disease.

MUST BE FED TO BROOD SOWS, for best results with pigs. Keeps the sows healthy and vigorous, free of fever, makes the milk flow purer and more abundant, insures strong, thrifty litters and **prevents runts.**

A BIG SPECIAL FREE OFFER, never made before—you can't afford to miss it—means dollars to you if taken advantage of at once. Try **Columbian Stock Powder** 90 days before you pay. Write at once stating how many hogs you have.

Columbian Hog & Cattle Powder Co.,
1450 Genesee St., KANSAS CITY, MO.

COLUMBIAN AUTOMATIC FEEDER FOR HOGS



The Greatest Improvement In 50 Years

The Peter Schuttler Patented Roller Bearing has revolutionized farm wagon construction. Official tests by road experts of the U. S. Department of Agriculture show remarkable results. Every farm wagon will soon have roller bearings.

Peter Schuttler
Roller Bearing Wagons
Do More Work Go More Miles

because the roller bearing runs easier and requires less power to pull the load. They do at least ⅓ more work (with the same team and over the same roads) than any other. They save time—horses—harness—feed—repair bills—greasing—trouble and wear on the wagon. They are much easier on the horses.

Write for our Free Book

which tells all about the improved and perfected Schuttler Roller Bearing Wagons and gives records of official tests by U. S. Government road experts.

Free upon request. **SEND FOR IT TODAY.**

ANISER HARNESS MFG. CO., Dept. 132F, St. Joseph, Mo.

FARM FURROWS
TURNED BY A PRACTICAL FARMER

The hog has been called the mortgage lifter and the cow the home builder. These are both well named, but what of the faithful horse whose hard work supplies the "sinews of war" for the whole shooting match?

We will not have perfect dirt roads as long as there are places along the roadsides where water can collect and stand until it evaporates or soaks into the soil. When our roads are thoroughly drained we will have taken the first long step toward permanent roads.

Look for lice on the calf with the rough coat of hair.

Now is a very good time to look over the orchard and do the necessary trimming. Bruised, twisted and crossed limbs and young shoots that will make undesirable branches should be removed and all wounds over an inch in diameter should be covered with paint or grafting wax to keep out the water and air.

Why not seed the bearing orchard and utilize the grass for sheep grazing?

The calendar tells that it is winter, but the weather man seems to be trying to make us forget our usual winter troubles.

At the present time a pound of butter fat is worth more than a bushel of corn or oats. Is it any wonder that the dairyman is pleased with his work or that the silo is gaining in favor?

That's the ram still running with the ewes, isn't it? Looks like poor management.

Buckwheat cakes "take the cake" as breakfast food these bright, crisp mornings, and for this also "there is a reason," especially with the man who must put in a hard half day's work before another square meal is due.

Clip the long hairs from the horses' fetlocks, to prevent the snow and ice from clinging to them.

The farmer who has a supply of corn fodder stored in the barn or stacked up in the yard can well afford to keep two or three cats. The main objection to corn fodder is that it makes such a perfect home for rats and mice.

Hang right onto the more mature sows till you see if the young sows are going to prove prolific breeders.

Crushed oyster shells are a necessity to hens on a farm where coarse sand or gravel is scarce. It is the only "teeth" they have and to get any benefit from their grain they must "chew" it in some way.

The white pine is the favorite tree with many as an evergreen wind break and in localities where it will thrive there is nothing better. It is a fine-looking tree and keeps its lower branches longer than the others of the pine family. It is worthy of a trial as a useful tree, but may be a disappointment as an ornament.

Intensified farming indicates an intensive thinker behind the work, and one that is apt to reason out success in anything he undertakes.

Plan to plant a good bean patch. There's big money in beans, besides providing for a season's supply for use in the farm household.

Avoid the horse with a straight hind leg, as the pressure on such a form of limb while he is at work will cause hoof, joint and muscular ailment.

Too many farmers try to make chick coops of a neat appearance, with little or no thought as to comfort, ventilation and sanitation. Every chick coop should have ample ventilation that would not come in on the little fellows' feet, protecting from rain, and be kept cleaned out well—fresh air, freedom from dampness, filth and vermin—these are essentials that are too often missing in the chick coop. Take a good look at yours.

There is a big, long risk to run and a market to gamble with when handling the steer, but the dairy cow rolls in the profits steadily every month in the year.

When a horse begins to act somewhat sick, don't dope him with drugs, but cut down his rations a little and let Dame Nature try her hand in restoring him to a normal condition.

Power For Every Job

This spring, if you have the "old reliable"

Hart-Parr Oil Tractor

to back you up, you can do all your plowing, discing and seeding in quick succession without delay. Do it all in half the time it takes you with horses. Easily save 50c to $1.00 an acre.

As soon as spring opens up, you start your steel muscled Hart-Parr and work it at full speed. Finish several weeks ahead of your neighbor, who must first round his horses into shape to stand the heavy strain.

There is almost no limit to the time saving and money making ability of a Hart-Parr Tractor. You can harvest and thresh with it. Grind feed, shell corn, husk, fill silos, haul crops to market, make good roads; in fact, do countless farm jobs that require big, dependable power.

One man easily operates and cares for the tractor. It uses **cheapest kerosene** at all loads. Costs little for up-keep. Has record for fewest repairs. Many other important features are fully explained in our new 1913 catalog.

Write for a copy and also get our literature on power farming costs.

HART-PARR COMPANY
228 Lawler St. Charles City, Iowa

How Studebaker Automobiles Are Made

A Heart-to-Heart Story. No. 2

In our February 6th issue we sketched the story of Studebaker steels and how we treat them. We tried to convey some slight idea of 40 drop forges, each with a touch now delicate, now tremendous. We told our readers something of our 40 heat-treating ovens, where steel is baked until the metal is harder than steel-armor and with a grain as fine as silk.

Today we shall move on from the great opening channels of Studebaker automobile manufacture into the shops, with their thousands of automatic machines and myriads of workmen. We do

Inspecting a finished piston with dial-faced gauge that measures to the thousandth part of an inch.

this in order that you may clearly understand the wonderful thoroughness and care with which every Studebaker car is built and so that at the end of these brief talks you can honestly say: "I believe in Studebaker cars. They are built as I would wish my own car to be built." If only we can describe clearly a little of this wonderful manufacturing organization we shall be satisfied.

First, a further word about automobile manufacture in general. We spoke last time of the difference between an "assembler" of automobiles and a real manufacturer, and the advantage every genuine manufacturer offers to a buyer. Bear this in mind as we go on.

The quality of any automobile depends—first, on the engineers' designs; second, on the steels of which the parts are made, and third, upon the workmanship which builds the car.

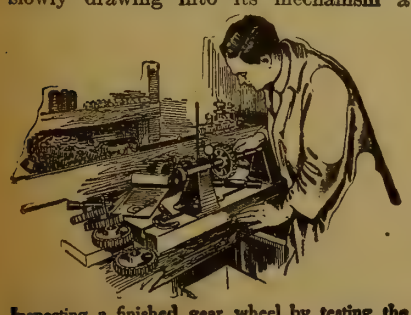
It is of this third point of which we shall now speak.

From the forge shop, the foundry, the heat-treating rooms, the steel mill, the rough parts enter the machine shops.

In machinery for building Studebaker cars we have invested millions of dollars. Why? Because that kind of manufacture is the best, and it is a prime Studebaker principle that the best is always the cheapest. No machine remains in our plants after a better one for its purpose can be secured. That is why Studebaker is always among the leaders. And because we build 50,000 cars per year it is cheaper for us to do this, although to a smaller manufacturer a similar investment is impossible.

There are 40 acres of floor space used in the manufacture of Studebaker cars, and fully half of this floor space is covered by the best machinery known to the art of steel manufacture. Some machines alone cost as much as $10,000. We buy them because thereby we build better cars at lower cost.

The other morning the writer stood beside an automatic machine which was slowly drawing into its mechanism a



Inspecting a finished gear wheel by testing the shape of the gear to the thousandth part of an inch.

two-inch bar of the finest special cone steel. In four automatic operations this bar of steel was being converted into ball cups for the ball bearings of the Studebaker "25" front wheels. The cup was completely shaped by this machine in two minutes, and it was accurate to within two thousandths of an inch. After being ground perfectly accurate in a special machine and heat-treated for tool-steel hardness and toughness, it is ready to assemble in the front wheel of the sturdy Studebaker "25."

Farmers see every Springtime the miracle of the growing seed; the unfolding and development of life. Here, perhaps, is a miracle of man's ingenuity almost as marvelous. The cold bar steel enters and the finished bearing comes out. No man can see the wonders of modern automobile manufacture without being struck with admiration.

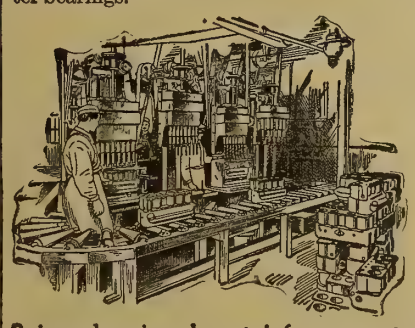
In the room with this same machine there are 100 other machines, and each machine cost over $2,000. The room is 300 feet long and 60 feet wide, and there are three automatic machine rooms of this size in the Studebaker plants. There are 296 automatic machines of similar type in the Studebaker automobile plants. Most of the small steel parts in Studebaker cars are made in these machines; always with the same marvelous accuracy and rapidity. It seems colossal, but remember that we are building 50,000 cars this year, and only in this way can they be built so good and so cheap.

One man can operate several of these machines and it is only by reducing labor cost in this way that we are able to pay excellent wages and at the same time produce, for example, the $1,290 Studebaker "35," which has no superior under $2,000.

There are, of course, various parts too large to be manufactured by an automatic machine, and these must be ground under the supervision of an expert mechanic.

Take the Studebaker cam shaft, which raises and lowers the valves. It goes through two drop forges and is aged for several weeks before it is ready for the 24 remaining operations in its manufacture.

In the first operation it is cut to length; it is then put on special lathes and rough ground. It must go through several of these lathes—one to machine the shaft proper, another to "shoulder" the cams and bearings, another to machine the cams, a fourth to machine the end bearings, a fifth to machine the center bearings.



Boring and reaming valve seats in four motors at a time. The motors are locked in cast steel arms which hold them absolutely true. Consider the economy and accuracy of such manufacture.

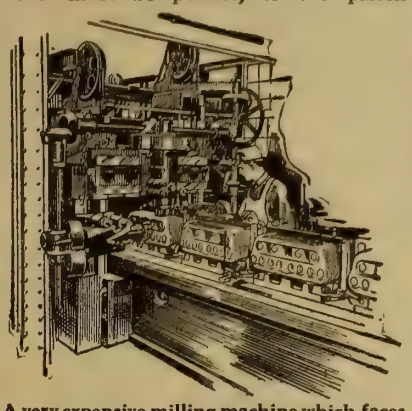
Then a heat-treatment tempers the core of the steel and a case-hardening oven bakes carbon into its surface until all the bearing surfaces are glass hard. It finally comes back to the machine rooms, where a vitrified emery wheel, turning over 1,500 revolutions per minute, cuts it within one-thousandth of an inch true.

When the last grinding operation is finished the cam shaft is handed over to a final inspector, who puts it on an absolutely true cast steel base and turns it under a dial-faced gauge which tests it to the last shade of accuracy. This inspector is provided with an India oil stone as fine as a razor hone, and when he is done with the cam shaft it is absolutely perfect.

Notice here that every cam shaft we build is identical to the last fraction of fineness with every other similar cam shaft and any shaft could be changed from car to car and give perfect results. A rifle barrel which shoots to hit and kill at a mile range is not as true as a Studebaker cam shaft.

Consider a Studebaker piston for a moment. It is cast from clean, pure grey iron. Its head is mirror polished to make it too slippery for carbon to adhere to it. It is slowly ground around its diameter of 3½ or 4⅛ inches until it is absolutely true, and its upper surface a few thousandths smaller than its lower surface in order that the expansion under the greater heat at the top may be compensated for.

The boring for the wrist pin bearings which hold the piston to the connecting rods must be perfect, or the piston



A very expensive milling machine which faces three sides of the cylinder at once, four cylinders at a time. Each cylinder is locked in a steel "jig" which holds it rigidly accurate to the grinding tools.

will not run evenly in its motor. Grooves must be cut for the piston rings; another very delicate operation, and when the piston is done it must equal, within a small fraction of an ounce, the weight of every other similar piston.

This is done so carefully in order that every Studebaker owner may get from his car service equal to that of the highest-priced cars built. The Studebaker organization has been doing business for 60 years, and it looks to the future confident, not so much in its reputation for square dealing as in its knowledge that every piece of work which leaves the Studebaker factories is creditable to the finest ideals of business skill and responsibility. We are selling not only cars which look surpassingly good, but cars that down to the last hidden detail are built to deserve every man's confidence.

Turning to the crank shaft for further illustration of Studebaker manufacture, we could fill this entire page in describing the machinery and operations necessary to make it. It is one of the most difficult parts of an automobile to make. There are no less than 12 standard tests through which a Studebaker crank shaft must pass before it can be used in a motor. These tests limit in accuracy to one-thousandth part of an inch and to the smallest fractional part of an ounce in weight. In other words, a Studebaker crank shaft must be perfectly sized and balanced.

Another very important matter in the operation and durability of a motor car is the way the gear wheels are cut. From our last story you know something of the fine materials which enter the construction of all parts of Studebaker cars. A Studebaker gear is first drop-forged, as we have described, in what is known as a "blank." That is, the gear at first has no teeth. It is then milled for perfect roundness and perfect center on its axis. Then it is ground for perfect width.

After it is made into a perfect "blank," the teeth are roughed out and it is ready for the cutting machine—one of the most remarkable machines ever made and, incidentally, a machine developed by a woman. This grinder cuts the finished tooth and the job is a mighty particular one. The unique teeth on Studebaker gears represent perfect efficiency curves, which means that a tooth in a Studebaker gear is in perfect contact from the moment it engages with another tooth until it disengages from that tooth.

Finally when the gear has completed its long journey through the shop it arrives at the inspector's table. He has an expensive machine, which is equipped with a master gear. The new gear is clamped into this testing machine and is rotated with the master gear in both directions under various pressures and at various speeds. If it is not perfect it will be noisy, and if it is noisy it is discarded.

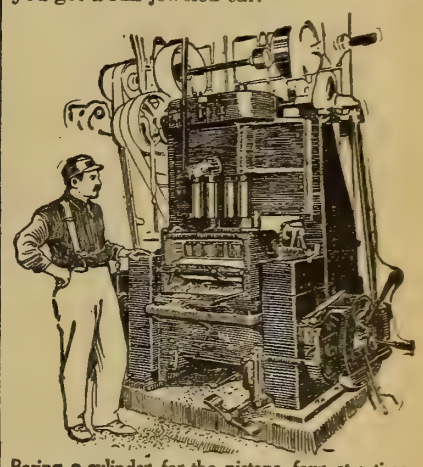
Thus we might go on describing part by part the manufacture of Studebaker cars. We shall close, however, with a final paragraph which we want you to consider deeply and carefully.

Quality in an automobile, as we have already said, depends upon the workmanship. The workman must depend to a certain extent upon his tools. If we were building a $5,000 car we could not buy more expensive or better machinery. We could not employ more skilful labor than we do. We could not require higher standards for accuracy. In fact we do not know how we could improve any of the vital parts of our cars. If we did, we would do so. We have an immense factory which covers nearly 40 acres. Our 60 years in the manufacturing business has given us—first, unquestioned manufacturing experience; second, financial resources sufficient to enable us to provide every mechanical facility known to the art of building quality motor cars.

It is for these sane and convincing reasons that Studebaker cars are such wonderful values. Believe in them, because from top to tires they are skilfully and honestly built. On these grounds we expect to interest you.

Naturally, we can understand why some cars cost more than others, for we ourselves manufacture one car at $885 and another at $1,550. But in the vital parts of each car we use exactly the same material, exactly the same expert workmanship. Studebaker standards of accuracy are just as high for the cheaper car as they are for the higher priced car. In fact, these two cars are almost identical in design.

The difference is merely a question of size. Just as watches are made in different sizes, so Studebaker automobiles are made in different sizes. In each case you get a full jeweled car.



Boring a cylinder for the pistons, four at a time. One of the most particular operations in the manufacture of an automobile.

A further description of Studebaker automobiles will appear in the March 6th issue, taking up the advanced stages of Studebaker manufacture. We trust that you will be looking for the coming story.

We regret that we could not go more into detail of manufacture in this story, but we are glad to invite you to send for our "Proof Book," which describes more fully some of the processes of manufacture and which tells the story more clearly by copious illustrations. You are welcome to it and upon your request we shall be glad to send it to you, together with our catalogue. Tear off the coupon below.

Take Advantage of Our Seventy Years' Experience

SEVENTY years' experience with harvesting and haying machines and tools and with equipment for building them economically; seventy years of exhaustive experimenting, testing, field work, and distribution constitute a tremendous advantage in favor of our machines.

Years ago the basic patents on these machines ran out Anyone who wants to may engage in their manufacture. But it is one thing to build binders and haying tools, and another and entirely different thing to build guaranteed machines and sell them at the prices of ours. Farmers have learned to value the high standard of quality which accounts for the dependability of harvesting and haying machines and tools bearing the well-known names

Champion Deering
McCormick Milwaukee
Osborne Plano

Changes in the construction of these machines are made only when actual work in the field shows the change to be an improvement. What changes are made add to the efficiency of the machine, and are not made simply for talking points.

I H C machines have harvested the grain fields of the world so long, have met and conquered so many kinds of difficulties and adverse conditions, that there is now no question of their capacity for cutting, binding, and saving all the grain in any field, whether it be heavy or light, tall or short, standing, down or tangled.

The time to investigate harvesting and haying machines and tools is before, not after, you buy. Ask your neighbors for their opinions of the machines they use. Some will favor one, and some another, for various reasons which may have a very decided influence on your buying, but you will find them unanimously in favor of one or another of the machines we sell.

Good binding demands good twine as well as a good machine. The strongest and smoothest is that sold by the I H C local dealer. It comes in balls guaranteed for length and weight, and is marketed under the trade names, **Champion, Deering, McCormick, Milwaukee, Osborne, Plano, International.** There are four grades of each brand—Pure Manila, Manila, Sisal, and Standard.

Let others do the experimenting with untried machines and untested twine. See the I H C local dealers handling these machines and get from them the reasons why I H C harvesting and haying machines and tools, and binder twine are the best you can buy. The I H C local dealers will supply you with catalogues and full information, or, write

APPLETON MANUFACTURING CO., 239 Fargo St., Batavia, Ill.

CURRENT EVENTS

JAMES A. PATTEN, the noted cotton and grain speculator, has pleaded guilty to a violation of the Sherman anti-trust law and has been fined $4,000 and costs in the federal court, the fine being promptly paid. It will be recalled that the United States Supreme Court recently decided that an attempt to corner the market, either in grains or any other commodity, was a combination in restraint of trade fully as much as a merger of concerns in a big mercantile trust. This decision was handed down in the Patten case and after considering it Mr. Patten changed his plea to guilty, although denying that he had wilfully or knowingly committed any offense. The decision and Mr. Patten's plea will go a long ways toward deterring any other attempt to corner any grain market, for while the $4,000 fine is merely a nominal one, so far as Mr. Patten is concerned, the government has given warning that future offenses will be dealt with much more vigorously, with prison terms imminent.

CAPT. ROBERT SCOTT, of the British navy, reached the south pole only a month after it had been discovered by Capt. Roald Amundsen, the intrepid Norwegian, but Scott perished in the attempt to return to civilization. Five of the leaders of his party lost their lives in a terrific blizzard which swept over the antarctic regions, so that his heroic feat was futile, except for the admiration it arouses for the deeds of brave men. Great Britain had hoped to be the first to reach the south pole, both Scott and Shackleton making heroic efforts to be the first to have this honor, Shackleton coming within 100 miles of the pole on his last trip. It was in a close race with Scott that Amundsen discovered the pole, being so fortunate as to reach his goal in a dash of thirty days. He has returned safely to civilization and is now engaged in lecturing in this country, preparatory to leaving in a year or two for a slow drift to the north pole, thus adding to his fame which began when he was the first man to discover and to navigate the famous Northwest pas- fame and a gallant seaman. He headed one of the largest and best equipped scientific expeditions that has ever set out on an exploring tour. The records found on his body show that he discovered Amundsen's hut and Norwegian flag at the pole when he reached there, thus completely verifying the claims of the famous Norwegian. There has been no controversy over Amundsen's title to south pole honors as there was over Peary's, due to the claims of Dr. Cook.

CHARGES of incompetence in the reclamation service are made by the congressional committee on interior department expenditures. It is claimed that the director of the service and his associates have discriminated "against the farmers and that the corporations operating the canals and the bondholders thereof alone received attention" on some of the largest projects now under way in the arid West. Director Newell indignantly denies the accusations and claims that they are based on antagonism to the conservation policy of the government. He answers the charges in this spirited manner: "It is a poor reward for faithful performance of duty to be compelled to submit to an attack so partisan and unfair as contained in this report which bears no signature. It looks like another adroit attack on conservation, the kind its friends expect with every change of administration. The report is a jumble of half truths and whole misstatements." Heretofore the reclamation service has been unquestioned and quite generally commended, millions of acres of arid land having been irrigated and converted into productive fields. At the same time, extensive land frauds have been by no means infrequent in the West and unscrupulous promoters have operated under the apparent protection of federal and state laws. It will be a good thing for the entire country (and not alone for farmer investors) to have the whole question of reclamation and land promotion in the West thoroughly investigated. Too much is at stake to allow the tillers of the soil to be defrauded and lured into new lands by will-o'-the-wisp promises incapable of fulfilment.

A BILL to prohibit the interstate shipment of intoxicating liquors into prohibition states, in conflict with existing state laws, was passed last week by both houses of congress. The bill was strenuously opposed by the liquor forces, but passed both houses by a decisive vote, 61 to 23 in the senate and 240 to 65 in the lower house. The bill had heretofore been opposed by Senator Smoot, of Utah, but a change of front in the Mormon church, which

Fairbanks-Morse Eclipse Engines

Two Sizes: Furnished With or Without Pump Jack

A pint of gasoline will run the No. 1 Eclipse engine an hour and pump over 1000 gallons of water against 80 foot head. Adapted to running cream separators, churns, corn shellers, grindstones, ice cream freezers, etc.

Handy Reliable Low Priced

As simple as it is possible to make a practical, powerful engine. Manufactured in our immense factory on the latest automatic machines. Large, dust-proof bearings. Thorough lubrication. All like parts absolutely interchangeable. Starts easily at any time. No danger from freezing.

No. 2 Eclipse Engine is twice as powerful as No. 1. Recommended for deep well pumping, wood sawing, feed-grinding, etc. State quantity of water desired in 24 hours and we will send catalog No. FB 603

Fairbanks, Morse & Co.
900 S. Wabash Av., Chicago, Ill.
Fairbanks Scales, Oil Traction Engines, Water Systems, Electric Light Plants, Pumps Windmills, Feed Grinders.

dominates Utah politics, led to a removal of the former opposition. The new law will not interfere with the shipment of intoxicating liquors to private consumers, but will make it impossible to ship liquor from another state into a prohibition state for general use or sale, either at wholesale or retail. It is looked upon as a decided victory for the anti-liquor forces. Senator Kenyon, of Iowa, championed the bill in the upper house and deserves much of the credit for the ultimate victory.

JAMES HAMILTON LEWIS, of Chicago, a former member of congress from the state of Washington, has been endorsed by the democrats in the Illinois legislature for the United States senate to succeed the late Shelby M. Cullom. Mr. Lewis has failed of election thus far, however, the legislature being deadlocked, with the vote divided as follows: Democrats, 94; republicans, 74; progressives, 24. The republicans have agreed upon Lawrence Y. Sherman for the senate and the progressives upon Frank H. Funk, but unless a coalition can be made the deadlock promises to continue for some time to come. For the vacancy caused by the ejection of Senator Lorimor the Illinois democrats have agreed upon C. P. Boeschenstein, but the shorter term office will not be filled until the long term election has been held, so Illinois bids fair to be unrepresented in the senate for some little time to come. The legislature was hopelessly deadlocked for a couple of weeks on the question of speakership of the lower house, until the democrats were successful in electing Wm. McKinley. It was claimed then that some trade had been made on the senatorship, but this has not yet developed. It is sincerely to be hoped that no scandal will mark the present deliberations as were discovered after the election of Senator Lorimor.

GENERAL FELIX DIAZ, the nephew of former President Porfirio Diaz who headed a recent revolt and who has been imprisoned since that time, was released by an uprising of his followers early in the week and now heads a revolution which bids fair to unseat the Madero government. General Reyes, one of the oldest and best known of the followers of former President Diaz, was killed in the early stages of the revolution. Felix Diaz was formerly chief of police of the City of Mexico and is a picturesque and strong character. His present successful revolt was brought about by the loyalty to him of the federal troops, which rebelled against President Madero and released Diaz from prison. American lives and property have been endangered as a result of the revolution so that it is extremely possible United States troops may once more be mobilized on the Mexican frontier. Affairs in the southern republic have been exceedingly uncertain since the overthrow of President Porfirio Diaz, who had held affairs in an iron hand for the third of a century during which he was in complete control. American intervention may be forced in order to protect American lives and property, particularly as a terrific battle has raged in the heart of the business district of the City of Mexico for several days hundreds of lives being lost already by the fierce artillery duel.

WISCONSIN CHESTER WHITE ASSOCIATION.

The managers of the Wisconsin State Fair will be asked to provide a Chester White breeder as one of the judges in the swine department at the 1913 exposition. Prominent Wisconsin breeders of Chester White and O. I. C. swine who attended the organization meeting of the Wisconsin Chester White Breeders' Association held in Madison last week believe that their breed is entitled to this recognition. James Fisher, of Eastman, was elected president; William F. Belda, of De Forest, vice-president; A. H. Kuhlman, of Lowell, secretary and treasurer; William F. Butts, of Brooklyn; F. D. Wilke, of West Bend, and Chris Schroeder, of Racine, members of the executive committee of the organization.

During the last year the Chicago packers cleared $850,000,000, according to report.

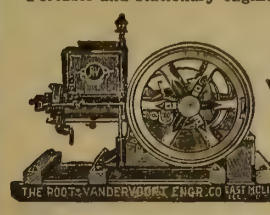
John Deere Implements

JOHN DEERE — MOLINE, ILL. — THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

R & V "Triumph" Gasolene Engines

Popular Farm Power

Develop even more than rated horsepower.
Easily started, smooth-running, dependable. Economical in use of fuel.
Speed easily increased or decreased.
Best type of magneto on the market.
Portable and stationary engines.



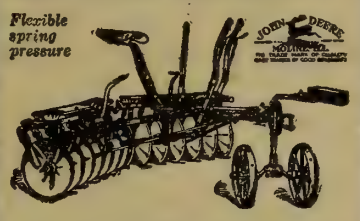
Light
Well Built
Durable
Neat
Compact

R & V "Triumph" Engines can be furnished in sizes 1 to 12 hp., with the hopper-cooling system. The cooling system does away with tank, pump, piping and fittings, making a neat, compact engine noted for its good working qualities. No air-cooled engine troubles to contend with.

Letting Gasolene Do It tells you about the convenience and money-saving points of a gasolene engine. Get this book and see how you can make your work easier. Lower left-hand corner of advertisement tells you how "to get these books."

John Deere Disc Harrows

Flexible spring pressure



Is the only spring-pressure harrow, and, therefore, only flexible harrow built. Spring-pressure secures greater penetrating power and more thorough cultivation. Instant leveling for all conditions enables operator to keep all discs cutting an even depth. High, solid steel gang frames make it extra stiff and strong, and give extra clearance.

Bigger Crops from Better Seed Beds Tells you how to prepare your seed beds for a bigger and better crop yield. You'll profit by reading this interesting little booklet. Lower left-hand corner of ad. tells you how "to get these books."

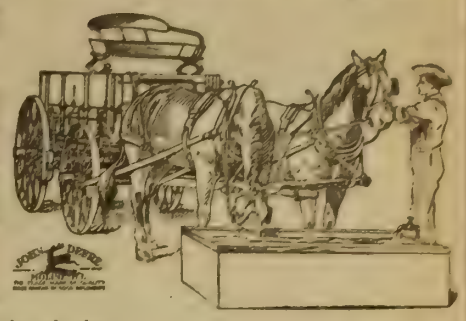
Better Farm Implements and How to Use Them

Illustrates and describes the most complete line of farm implements. Tells how to adjust and use them under varying conditions. It has a practical encyclopedia for the farm, and is worth dollars to you.

To Get These Books Write to us at once stating which books you want, and they will be mailed free. To to be sure that you get a copy of *"Better Farm Implements and How to Use Them"* ask us for Package No. X-27

Davenport Roller Bearing Steel Wagons

There is a wagon made that is stronger, more durable and of lighter draft than any other. This wagon is



Built Like a Bridge

Entirely of steel I-beams, channels and angles, solidly held together with large steel rivets, put in hot under great pressure.
Like the steel railway bridge, it is constructed for hardest lifetime service. Strong and durable.
Each front gear and each rear gear is practically one solid piece that can not come loose or apart.

Steel Wheels

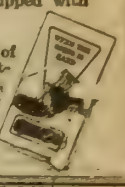
This wagon has steel wheels that are trussed and made with a tension, the strongest known wheel construction.
Every spoke is staggered and forged hot into the tire.
Regardless as to whether the spoke is at the top, side or bottom of the wheel, it always carries its share of the load. Wheels on a Davenport wagon will stand up and work indefinitely.

Roller Bearings

That roller bearings reduce draft is generally conceded. Of the various styles, the straight roller bearing is the simplest and most successful. They are practically everlasting.
For this wagon, the straight roller bearing is especially adapted.
The spindles and hubs are straight. Consequently, as this wagon is equipped with straight roller bearings, it is of light draft.

The Roller Bearing

When the Going is Hard is the title of an interesting little booklet on the wagon question. It contains twenty-six of the best articles on wagons that have been written. See lower left-hand corner of this advertisement for how "to get the book."



Aspinwall Potato Planter

The Leading Potato Planter in All Potato Growing Sections

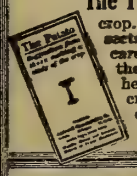
Accuracy in a Potato Planter is the prime essential. This is found in the *Aspinwall Planter*—a machine that is staunchly built, will do good work and is easily handled.

CONVENIENTLY OPERATED

Both feed and coverer tension are regulated from the seat. No removal of bolts—simply turning the thumbscrew does the work.
All parts are thrown in and out of gear automatically when lowering the plow for work or raising it at the end of each row.
This machine plants a greater range of seed, as to size and shape, does it easier and with less friction and wear, than any planter of its kind.

DOUBLE ROW PLANTER

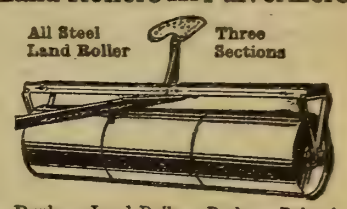
A double row machine is made with extra large hopper capacity.
Either single or double row planters may be equipped with fertilizer attachment.
The *Aspinwall* is absolutely the only machine that will plant potatoes of any size without adjustments.



The Potato Suggestions from those making a study of the crop. How to rid the plant of insects; how to plant potatoes; the care of the crop, and how to dig them. You will find it a great help in making your potato crop. Lower left-hand corner of ad. tells you how "to get these books."

Dunham Roller-Bearing Land Rollers and Pulverizers

All Steel Land Roller — Three Sections



Dunham Land Rollers, Packers, Pulverizers, and Sub-Surface Packers are made for every purpose and all soil conditions. Only first-class material enters into their construction and they do good work even under the most adverse conditions.

Light Draft—Roller Bearings

The Dunham Pulverizers, Packers and Rollers are the only ones today equipped with Roller Bearings. The bearings revolve in the end bracket casting and the axle in turn revolves within the bearing. All bearings furnished with hard grease cups.
Dirt proof caps fit snugly into the shoulder on the end bracket castings, completely covering the end of the axle and making the roller bearing construction absolutely dirt-proof.

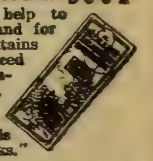
Do Good Work

Dunham Land Rollers and Pulverizers will break up the lumps, smooth off the field and give a perfect foundation for a full even growing crop.

Absolutely Dirt-proof — Runs 44 per cent easier than others

Roller Bearing Construction

The Roller Bearing Dunham A little book that will be a great help to you in preparing your land for seed this spring. It contains suggestions from experienced men on the proper preparation of the land for the seed, and you will profit by getting this book. Lower left-hand corner of ad. tells you how "to get these books."



John Deere Plow Company
Moline, Illinois

Towers' Surface System

Kills weeds; damages no corn roots; enlarges yield

Towers' Cultivator stirs every inch of ground between the rows; makes a dust mulch—to retain moisture and furnish liquid food for the plant; preserves crop roots; slaughters weeds; prevents "firing" of corn. **Increased yield, earlier maturity of corn, cotton, potatoes, etc., will result if your 1913 cultivator has the name**

"TOWER" on the tongue

Lighter draft on team; easier to manage—a boy can do it. Send a postal for our free "Treatise on Corn Culture."

How to Save the Most Money

On Your Manure Spreader

Buy the best to begin with! That's it—the *best*—regardless of first price! The *cheaper* the spreader, the *more expensive* it is in the end. Get the spreader that thousands have proved, in over twelve years' use, the biggest money-saver and money-maker. The Spreader that has stood every test is now made *low down* for easy loading—the kind you'll buy sooner or later. Buy it now!

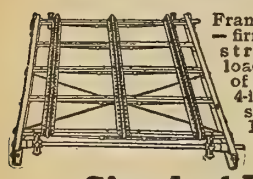
The Proved Spreader—It's Special Features

Low Down—Waist High—Safe Clearance—Short Wheel Base—Wheels Under Load—Roller Bearings—Lightest Draft—Simplest Drive—Avoids all Trouble of Enclosed Gears—Most Durable Beater—Trussed Steel Frame—Indestructible Front—Perfect Construction.

LIGHT DRAFT—LOW DOWN

Great Western

Trussed Steel Frame



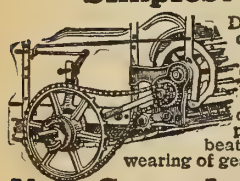
Frames of trussed steel—firmly braced—great strength. Weight of load, beater and force of operation all on the 4-inch steel sills. Can't sag, spring or give; 102 rollers to carry endless apron.

Front Won't Pull Out

Double heavy oak bolster—16-inch fifth wheel—every part extra strong.

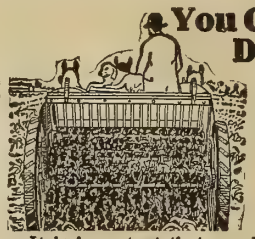
GREAT WESTERN fronts *will not pull out.* They are built to stand the heaviest strains.

Simplest Drive



Direct chain drive—no complicated gears—everything in plain sight. The simplest, strongest, most sensible drive on any spreader. No parts in motion when beater is not in use—no wearing of gears or chains.

You Can Top Dress Corn



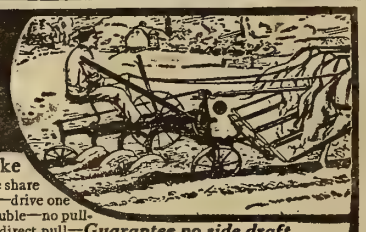
GREAT WESTERN rear wheels track with the front; you can straddle two corn rows for top dressing growing crops. This you can't do with narrow front trucks.

GREAT WESTERN means an easier pull—only two tracks across yards or fields.

New Spreader Book Free It is important that you learn all about this *old reliable* GREAT WESTERN in its new *low-down* form. Be sure to write at once for Free Book describing it in every detail and proving why it's best for you or any man. Get it now. Shows all the detail of this old reliable GREAT WESTERN now made *low down* for easy loading. The cuts and details prove why it's the one perfect spreader. It's the one spreader that will just suit you in every way.

Rock Island Plow Co., 184B 2nd Ave., Rock Island, Ill.

Plow More in a Day



Divide the pull evenly between your horses and make plowing easy. Gamble Equalizers give each horse exactly the same share of work—make plow teams easy to manage—*make your work easier*—drive one horse in furrow and three on unplowed ground. No worry—no trouble—no pulling out of the furrow—no chance for tugs to injure horses. Give direct pull—*Guarantee no side draft.*

The **Gamble 4-horse Equalizer** works 4 horses abreast to gang plow with one horse in the furrow and 3 on unplowed ground. Equalizer in illustration evens pull on 16, 18 and 20-inch sulkies with clevis hitch and 12 and 14-inch disc gangs. Also on disc sulkies and 12 and 14-inch gangs having wide draw head.

Gamble Equalizers Guaranteed

to give perfect satisfaction and work as we say or *money refunded. There is only one genuine* Gamble Equalizer fully protected by patents—no others like them. *Get the best. Do not accept a substitute.* Cost so little you can't afford to be without them.

Gamble Equalizers made for 3, 4 or 5 horses. Can be used on farm wagons, manure spreaders, seeding and harvesting machines, hay loaders and all kinds of plows and harrows. See them at your implement Dealer's. If he does not handle them, send us his name—we will see that you are supplied. Send for FREE illustrated catalog showing full line of GAMBLE EQUALIZERS.

All power direct from rear axle. Only two levers to operate. Strong metal wheels. Absolutely necessary for every grain and fruit farmer.

Write for New Catalog. Shows pictures and describes in detail. **New Idea Spreader Co., 144 Sycamore St., Coldwater, Ohio**

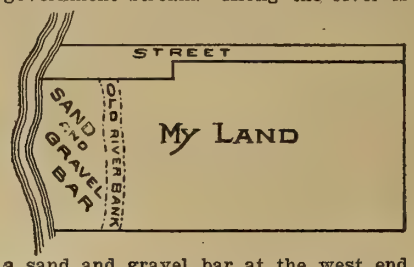
OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

BOUNDARY LINE—SANDBAR.

A Subscriber, Hawarden, Iowa.—I own four and a half acres of land on the Iowa side of the Sioux river, which is a government stream. Along the river is



a sand and gravel bar at the west end of my land. (1) Have people a right to go on this bar and haul away gravel and sand to sell? (2) How can I prevent them from doing so? (3) How close to the stream can an adjacent owner fence his land? See accompanying diagram.

Answer.—If the sand and gravel bar is on your land people have no right to take sand or gravel therefrom, and you can sue them for damages and can also obtain an injunction from the district court to prevent them from so doing. If the Sioux river is a navigable stream and forms a boundary line to your land, your line is at high water mark; if it is not a navigable stream your line is in the center of the stream, unless your deed describes it otherwise. If the bar was formed gradually between the present channel of the stream and its old bed and the stream was your boundary line then you own the sand bar, but if the stream changed its channel suddenly, your line is at the old bed of the stream. Your letter is indefinite as to your boundary line. An owner can fence his land where the boundary line runs.

NOXIOUS WEEDS—TIMBER LAND.

A Subscriber, Belle Plaine, Iowa.—(1) Whose duty is it to enforce the law in Iowa concerning noxious weeds, and what is the penalty for failing to enforce it? (2) I own forty acres of fine young hard wood timber land, which I use only for the fuel thereon, cutting the dead and inferior trees. I have asked the assessor to assess it as timber reservation, but he says I must place a nog-tight fence around it. This land does not join my farm and is not used for pasture. Does the law require me to fence it?

Answer.—(1) It is the duty of landowners to destroy noxious weeds growing upon their land. If they fail to do so after being so ordered by the township trustees, the trustees may cause such weeds to be destroyed at the expense of the landowner, to be recovered by a special tax certified by the township clerk in same manner as unpaid road taxes. (2) The law does not require you to fence your timber land.

DRAINAGE OF PUBLIC ROAD.

Mr. J. C. Kongsback, West Bend, Iowa.—My land is within an established drainage district and was assessed for the benefits thereof. After the district was established, and before the ditch was completed, I tile drained my land crossing the public highway and ran my tile drain along on one side of the road for some distance and left my tile empty on the side of the road, some distance from the county drain outlet. The water from said drain soaks the road grade and spreads over the ground at the outlet, destroying crops. The trustees directed me to tile drain to the outlet and after work was done asked me to pay half. My land is tiled and I think I should not pay anything unless I see fit to donate a part of it. The trustees allowed for the hauling of the tile, but nothing more as yet. Is it the duty of the board of supervisors to attend to the drainage of the road, or should the township trustees attend to it?

Answer.—It is the duty of the township trustees and the road superintendent to attend to the drainage of the road.

FENCING SCHOOL SITE.

A Subscriber, Stronghurst, Ill.—School grounds are located on the southeast corner of my land. A public road runs on the east side of the school grounds and also on the south side thereof. Am I required by law to construct and maintain the fence between my field and the school grounds?

Answer.—The title, care and custody of all schoolhouses and school sites belonging to a school district are vested in the trustees of schools of

YOU ARE ENTITLED TO COLUMBIA

when you buy or use batteries. When buying insist on your rights. If you don't get COLUMBIA you don't get your money's worth.

GET Square Deal PRICES

On Square Deal Fence First

Send for this catalog and price list. See what it means to you to buy a fence woven at the mill that makes the wire.

Square Deal Fence is elastic, springy—made from wire that is hard but not brittle. The wavy strand wires keep Square Deal fences tight and trim the year 'round. The one-piece stay wires help support the fence—keep it from sagging between posts and from buckling at the bottom to let the pigs under—requires fewer posts, saving money, time and labor.

The Square Deal Lock—"the knot with a grip that will not slip"—locks every strand securely so stock can't spread the wires. No brittle welds to snap—locks are all self draining—moisture will not remain in the knot and rust the wires.

Drop Us A Postal Today—get our catalog, price list, local dealer's name and a high grade, four-section folding 2-foot rule—all FREE.

the township where they are situated. If they choose to let the school ground lie open and unfenced, you will have to build the division fence yourself, but if they enclose the school site, you will be required to build half of the division fence, and the trustees the other half.

RURAL DELIVERY—INHERITANCE TAX.

A Subscriber, Marshalltown, Iowa.—(1) We live one-half mile from the rural mail delivery route. Can we compel the mail carrier to come within a quarter of a mile of our place, and if so, how shall we proceed? (2) What are the main features of the inheritance tax law in Iowa?

Answer.—(1) You cannot compel the mail carrier, to leave his regular route so as to come within a quarter of a mile of your house. You might possibly have the route changed by petition to the postoffice department, and the assistance of the member of congress from your district. (2) All property which passes by will or otherwise, to take effect after the death of the grantor, to any person, except father, mother, husband, wife, lineal descendant, adopted child or stepchild, or lineal descendant hereof, or to a charitable educational or religious society, hospital, public library or public art gallery, above the value of $1,000, is subject to an inheritance tax of 5 per cent on its value, after payment of debts, if the beneficiaries are aliens not residing in the United States, such tax is 20 per cent, unless they be brothers or sisters, in which case it is 10 per cent. Said inheritance tax is a lien on the estate from the death of decedent, until paid.

INSPECTION OF CATTLE—WISCONSIN.

A Subscriber, Fonda, Iowa.—I intend to move from Iowa to Wisconsin in February and will take with me some horses, cattle and hogs. Will I have to have these animals inspected before I start or after I arrive in Wisconsin? What must I do to fill all lawful requirements?

Answer.—The horses and hogs will not have to be inspected, but you will have to have your cattle inspected and get a certificate thereof, from a graduate of a recognized veterinary college in the United States, Canada or Europe, the certificate to accompany the cattle when shipped, and to show that they were free from disease, where shipped, and had been so for six months prior thereto. If you do not do this, you must have the cattle shipped in quarantine to first destination in the state of Wisconsin and there held and inspected by an inspector appointed by the live stock sanitary board of Wisconsin at your expense. The first way is the best.

DEED OF TRUST—DEFICIENCY—JUDGMENT.

Mr. Joel M. Scott, Muscatine, Iowa.—I hold two notes against B, who lives in Missouri, secured by a deed of trust on land. The deed of trust provides that "should the first party fail to pay the debt or the interest, or any part thereof, when the same shall become due, according to the true tenor, date and effect of said notes, then the whole shall become due and payable, and this deed shall remain in force and the said party of the second part, or in case of his absence, death, refusal to act in any wise, the then acting sheriff of the county, at the request of the legal holder of the notes, may proceed to sell the property described, or any part thereof, at public vendue to the highest bidder for cash, first giving time, terms and place of sale." In case the sheriff should sell the property and the proceeds should not be sufficient to pay the debt, could a levy be made on other property of B?

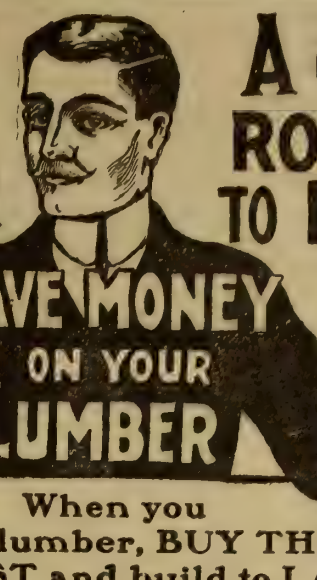
Answer.—The levy could not be made on other property of B without first getting a judgment for the deficiency. You could sue B for such deficiency and obtain a judgment therefor and upon such judgment have an execution levied on B's property.

LIGHTS ON MOTOR VEHICLES.

Mr. Julius Moeller, Creve Coeur, Mo.—There was an accident recently with an automobile which had only one of its side lights burning. The accident occurred after dark. Is there any law in the state of Missouri or in St. Louis county which requires a motor vehicle on the public road to carry a light after dark?

Answer.—The law of Missouri provides that every motor vehicle operated or driven on the public highways of the state, shall during the period from one-half hour after sunset to one-half hour before sunrise, display two lighted lamps on the front and one on the rear of such vehicle, which shall also display a red light, visible from the rear.

A GUARANTEE OF BETTER LUMBER



A FREE ROUND TRIP TO DUBUQUE - SEE WHAT YOU BUY

When you buy lumber, BUY THE BEST and build to LAST. Poor lumber is dear at any price.

OUR GUARANTEE

All our lumber is graded under the Manufacturer's Association rules and every bit is guaranteed to be up to grade or better. Every shipment we make is sent subject to inspection, and if not found up to this guarantee, the shipment may be returned, at our expense, and your money will be refunded.

To get the very **highest quality** and **low cost BOTH, buy from us direct.**

You will get better lumber in every item than any local yard can furnish you; because we make our own lumber and grade it properly; because your order is selected from the most complete assortment in the Middle West, consisting of over 20,000,000 ft. of the best, brightest, new lumber ever sawed. You always get exactly what you want and just what you should have for the work in hand, and everything of **the highest grade.** You will not be obliged to take seconds or substitutes which are supposed to be "just as good."

When you buy from us, you buy direct from the manufacturer at mill prices.

You are your own lumber dealer. All the middlemen's profits go into your own pockets. You secure better lumber and at a saving in price.

If you want a car load, come to Dubuque. We want an opportunity to show you our stock and convince you that we are in position to serve you to advantage. If you buy, *will gladly refund your railroad fare both ways* and you have an opportunity to select your own order personally. *This is a tremendous advantage* to you, but if you cannot come, order by mail. *No matter how small* your order may be, we can save you money and our absolute guarantee of quality insures your satisfaction on every item or you can return it and get your money back.

DUX-BAK ROOFING Is as good as our Lumber.

Sells for 50% to 75% less than other kinds not anywhere near as good. Made of the best of materials. Don't crack, run or peel. Water-proof and fire resisting. Easy to lay.

LOOK AT THESE PRICES.

NEW LAND

NEW TOWNS ALONG THE NEW

M.O.& G.RY.

IN OKLAHOMA

A million acres in the five northeastern counties of Oklahoma have remained unsettled because the nearest railroad was 10 to 35 miles away. The new northern extension of the Missouri, Oklahoma & Gulf Ry. from Muskogee to Joplin, Mo., 130 miles in length and running for a distance of 90 miles through the rich valley of the Grand River, is now completed through this section and both passenger and freight trains are being operated. New towns are being built and thousands of farms will be put in cultivation this season.

COST Land in Cherokee, Delaware, Mayes, Ottowa and Craig counties is to be had at $35 to $50 per acre which will soon advance in proportion to the older settled counties.

CROPS All kinds of live stock and grain farming is adapted to this section. All grains and grasses, and all live stock which is grown in Iowa, Missouri and Kansas is successfully produced here.

RAINFALL This part of Oklahoma is in the 40-inch rainfall belt and has an abundance of pure water for both household and stock. The climate is mild and pleasant, being just between the cold North and the southern heat.

This railroad has no land to sell. We simply furnish reliable information concerning land and new towns tributary to our road to prospective settlers. This is a proposition you should not overlook. Write today to

"My Avery Farm Truck is Doing the Work of 3 Teams and 3 Men at Cost of 1 Man and 1 Horse"

That's what one Avery Farm Truck owner writes about the work his Truck is doing. Others are having similar results. No wonder men are selling their horses and getting Avery Farm Trucks to do their hauling and other work. Just think what an Avery Farm Truck does. It hauls 3 tons on its own bed and will also pull a loaded wagon behind. Travels at speeds of from 2 to 12 miles per hour.

Avery Trucks are being used for hauling grain, hogs, sheep, lumber, coal, sand, gravel, crushed rock, milk and cream, fruit and vegetables, flour and other farm and manufactured products. They are **money** and **time savers.**

Have special **cast steel rim wheels** designed particularly for hauling on country roads. **No tire expense** as with rubber tires.

AVERY. Farm Truck

FREE BOOK OF HAULING FACTS

Learn about hauling with an Avery Truck. Tell us what you have to haul, how far, how many horses you use, and find out if an Avery Farm Truck will not do your hauling cheaper and quicker. Write for Avery Truck Book, with hauling facts. It's free. Address,

Avery Company, 1263 Iowa Street, Peoria, Illinois

Also manufacturers of Avery "Light-Weight" Gas and Oil Tractors, Undermounted Steam Engines and "Yellow-Fellow" Separators.

Keep the Grain Out of Your Straw Pile

All threshing machines are not alike. There is one different from all others. It has a different way of taking the grain out of the straw. **It beats it out** just as you would do by hand with a pitchfork. All other machines depend upon its dropping out.

This one different machine is the Red River Special and you should insist upon having it do your threshing. It will save all your grain and waste none of your time.

It saves the Farmer's Thresh Bill.

It has the Big Cylinder, the "Man Behind the Gun," the patented Grate and Check Plate, the greatest separating devices ever built.

The Big Cylinder drives the intermingled straw, chaff and grain against the separating grate, **beating** the grain through where the check plate catches it and delivers it to the grain pan and mill.

Ninety-five per cent of the grain is taken out right there.

The straw goes over upon the shakers which hold it and **beat** it until all the grain is **beaten out.**

In all other kinds the straw is hurried out of the machine and the grain is expected to drop out.

It doesn't. Thousands of green straw stacks every year loudly say it doesn't.

The Red River Special saves all this. Insist upon its doing your work this year.

It will save your thresh bill. Write for proof.

To Whom It May Concern:

I. J. Knudson, farmer, of McHenry County, North Dakota, do depose and say that during the summer of 1908 I bought of Nichols & Shepard Company a threshing outfit, consisting of one 20-horse power, double cylinder traction engine and one 32x52 Red River Special Separator with wind stacker, self-feeder and weigher attached.

That on or about August 23, 1908, I started this outfit near a stack of old straw that had been threshed in 1907 by a———separator, and to stretch the belts on the new machine I caused a small load of old straw from the stack in question to be run through the new machine and was surprised to get over sixteen bushels of oats from this load of straw.

I afterward threshed out the balance of this stack and got 347 bushels of grain.

(Signed) JAMES KNUDSON.

Subscribed and sworn to before me, a Notary Public, in and for McHenry County, North Dakota, this 6th day of Feb., 1909.

[Seal] J. EDGAR WAGAR, Notary Public.

My commission expires March 27, 1914.

STATE AID FOR GOOD ROADS.

(Continued from page 3.)

the "show me" state. The residents of Pettis county (Sedalia, county seat) built sixty-four miles of rock macadam road last summer with a $200,000 special road district bond issue, the cost being from $3,300 to $3,600 per mile, with the rock adjacent to the road. At this modest figure, they secured three miles of good highway for every one mile of concrete pavement laid by the farmers of Wayne county, Michigan, last summer, at a cost of $10,000 a mile. The durability of the concrete pavement is looked upon by the Michigan farmers as justification for their expenditure and as giving them the advantage over the Missouri macadam road in the long run.

Not to be outdone by its neighbors, Wisconsin is providing for funds by a law stipulating that if any town votes any sum of money up to $2,000, either at a regular or a special election, the county board of supervisors must appropriate an equal amount, a rock or gravel road to be built within the ensuing year, under direction of the county highway commissioner. This insures an annual fund of $4,000 for each town, which in the aggregate means a handsome fund annually available for the important task of bringing town and country closer together through the medium of improved highways.

Good roads can no more be built by statistics than by hot air and printer's ink, but figures are of value in showing the extent of the campaign for permanent roads built by state aid. The secretary of the Lakes-to-the-gulf Highway Association has collected figures showing that nine states are spending each a minimum of $1,000,000 a year on road improvements (California, Connecticut, New York, Massachusetts, Ohio, Iowa, Oregon, Pennsylvania and Washington), while from $500,000 to $1,000,000 a year is being spent by four states: Maine, Maryland, Oklahoma and New Jersey. These figures do not include various sums raised by counties in states where the burden of highway development is still left to the individual counties. In Texas, for instance, $10,650,000 was available for road work, each county levying an ad valorem tax for road construction and maintenance. In this connection it is interesting to note the various means whereby road funds are obtained. There are fourteen states in which all the money for highway improvements comes from the general tax fund. In four states, this is supplemented by the income from automobile licenses. In nine states the public road fund depends solely on bond issues. A few states have a special and continuous road tax and others look chiefly to a poll tax.

FAVORS DEEP PLOWING.

To the Editor of The Homestead:

I have had a good deal of experience with deep plowing and in my opinion it is the very thing for the land. I prefer to break the land or turn it about six inches deep and then run a subsoil plow six or eight inches deep in the same furrow, for if you turn your ground deep you will fail to make much corn the first year, but will have a fine crop of stalks. It is quite different with small grains and deep plowing for wheat or oats or clover is all right. Deep plowing for corn land is all right if plowed ten or twelve inches in the early fall, but I perfer going down gradually, say two inches each year until the depth of twelve or fourteen inches is reached. I find that the land will not wash so badly.

In the year '54, the driest year that I ever experienced, I was living in Calloway county, Kentucky. We had subsoiled our land that spring and we raised a pretty fair crop of corn while our neighbors' crops failed completely. I did the same thing in the year '74 and had corn for sale while my neighbors had to buy.

Sears, Roebuck and Co., Chicago, Ill.

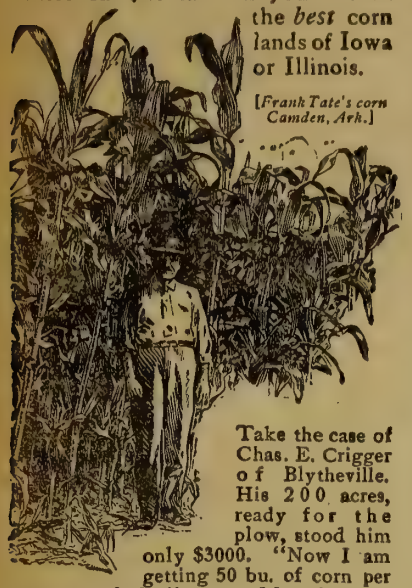
Mr. Jeffries got 93 bu. of corn per acre

on a tract of land near Clarendon, Ark. Of course, that's some yield; but taking seasons *as they come*, you could raise as much corn down there on $20 land as you can on the *best* corn lands of Iowa or Illinois.



[*Frank Tate's corn Camden, Ark.*]

Take the case of Chas. E. Crigger of Blytheville. His 200 acres, ready for the plow, stood him only $3000. "Now I am getting 50 bu. of corn per acre regularly," says Mr. Crigger. Last year my crops brought me $10,400." You could get *twice* as much profit from land that cost *half* as much — along the

Cotton Belt Route in Arkansas and Texas

— besides cutting your winter expenses *'way down*, on account of the milder climate.

Frank Tate, near Camden, Ark., told me he made 63 bu. of corn per acre. Mr. Tilson, who owns a Red River Valley farm in East Texas, says his section has the irrigated lands northwest beat a mile for alfalfa. He is getting $50 per acre from alfalfa on his *low*-priced land—with no need for irrigation.

These lands won't stay cheap always. They have already doubled in value since 1905; but even this year you can buy at $12 to $25 per acre, as good land there as you are farming now. And you'd have *every* advantage of schools, churches, close neighbors, good local markets, phones, rural free delivery, etc. This proposition deserves serious thought.

On the 1st and 8rd Tuesdays of each month there are low round trip excursions to Arkansas and Texas via Cotton Belt Route, allowing 25 days' time and free stopovers. Go on the *next* one.

Get our free books!

Written by a farm man who knows farming from A to Z. He traveled over thousands of miles in these sections to learn where the *real* farm opportunities were—the kind he knew *you* would grasp if you saw them. He tells you, in plain words, all about them. 100 pages and farm pictures. Send a postal today for your *free* copies.

AN EXPERIENCE WITH A FARM TRUCK.

I NOTE your article in your paper recently under the title "Farm Tractors Increasing in Popularity." You ask that those who have used tractors submit their experience.

Relative to the machine I am using would say it is a forty-five horsepower farm truck, gasoline motor which has four cylinders, has forty-one-inch wheels with a six-inch face. The rims of same are cast malleable filled with two-inch hard wood plugs. In addition to this there are two eight-inch extension rims for rear wheels which have spades in them that work automatically, that is, when the machine passes over soft or muddy soil and the drivers begin to slip, these spades in the automatic rims open and form a spud to pull against. This machine has a sliding selective type transmission, three speeds forward and reverse. The speed is from two to fifteen miles per hour. Has hardwood platform, is fifty-two inches wide by 123 inches long, and I have a box for same which is the same size of platform and thirty inches deep. This has a capacity of better than 100 bushels of wheat. This truck is rated as a three-ton machine, though I have had as much as 7,500 pounds of wheat in one load and know it will carry more. In addition to this it would pull another two tons in a wagon hooked on behind.

At threshing time I had to have some coal, so I drove my machine to town loaded on two and one-half tons and made the trip home which is three and one-half miles in twenty-five minutes. With a team this would have meant at least two loads and at least two and one-half hours' time, that is, two and one-half hours from town home. As to plowing would say horses are not in it with the truck. I use three fourteen-inch bottom plows and pull same in low gear and can plow ten acres per day easy. However, I have done most all of my plowing using the intermediate gear and plowed better than twelve acres per day. Our soil is a sort of a black sandy loam. It takes about two gallons of gasoline per acre. When the ground is extra hard breaking in the fall, as sometimes occurs, it requires a little more gasoline per acre say twenty-five gallons for ten acres. But under ordinary conditions about two gallons per acre is sufficient. I also use this machine for preparing wheat or corn ground. For wheat I hook on a fourteen-disk pulverizer and ten-foot peg tooth harrow, pull both at the same time and have prepared as much as thirty acres per day. At this work I run on intermediate gear and use about twenty gallons of gasoline per thirty acres. At harvest time I pull a seven-foot cut binder, but owing to the fact I have experienced so much trouble with my binder, I am unable to say just what it would do in this line. But I do know that the flies or heat does not affect its work.

This machine weighs about 6,300 pounds equipped with rims and all ready for field work. We have about 160 acres of tillable land, growing about one-half wheat and one-half corn. In addition to this truck we keep six head of horses, to plow corn, to use at threshing time, etc. However, if I did not have the truck would have to keep from eight to ten head of horses.

It is estimated that one of these trucks should last from six to ten years according to how it is handled, kept in repair and oiled. Of course, the care has all to do with any kind of machinery. Some care for and use a piece of machinery four and five times as long as others.

For the quarter section and up to 200 acres we believe this is the best style of farm power to buy, as it will not only do the majority of field work on that sized farm, but the hauling capacity is also a great factor in delivering grain, produce and stock. And besides this the machine can be used for stationary work on the belt such as running corn sheller, small grain thresher; feed grinder, pump water and in fact has plenty of power for all farm work. G. S. Pine.

Happy Days, Fellows!

A pretty girl, a sleigh, a smooth road, and a pipeful of Velvet! Can you think of a better combination than that?

But whether you have the girl and sleigh or not—there's lots and lots of pleasure in a big, red tin of Velvet. It's so mild and rich and fragrant that you can't help but enjoy it. And snow, rain or shine—winter or summer—you can always have this delightfully smooth tobacco.

Don't go without it. Ask your storekeeper for Velvet today. You want the best.

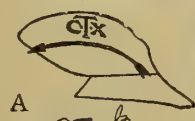
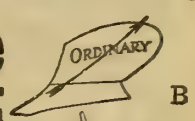
Take Your Choice



A



B

between a Rock Island "C.T.X." Universal and the commonplace kind of plow. They cost about the same. But *remember*, the "C.T.X." Universal means "fat" crops, while the common plow is apt to mean "*skinny*" crops.

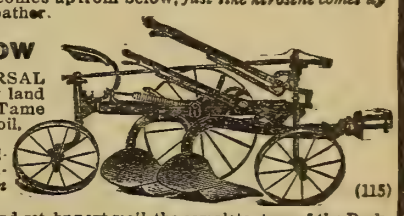
Beware of Air Spaces

Those innocent-looking air spaces left between topsoil and subsoil when plowing have been costing the American farmer MORE THAN ALL OBNOXIOUS WEEDS, BUGS, PESTS, SCALES AND PARASITES COMBINED. Air spaces completely *cut off* the water supply from below and cause crops to start withering and drying up the minute a hot, dry spell comes.

Get a plow that *doesn't LEAVE any air spaces*—the Rock Island "C.T.X." Universal.

Note the peculiar, corkscrew shape of this plow *bottom*. (Picture A.) The arrow shows how dirt travels—backward and *DOWNWARD*, not backward and UPWARD as in the ordinary plow. (Picture B.) The Rock Island Universal doesn't spill any dirt into the furrow; turns the slice clear over, without crimping. Lays it flat and smooth, at the same time pulverizing it thoroughly and burying all trash. Topsoil lies right against subsoil—doesn't leave fatal air spaces. Water comes up from below, *just like kerosene comes up your lamp wick*. It feeds the crop in dry weather.

A Real UNIVERSAL Plow



And don't forget, *this plow* is a UNIVERSAL plow—does perfect work in *any* soil on any land that's plowable. It walks right through Tame Sod, Heavy Clay, Sandy Loam, Mixed Soil, Stubble Fields, Old Cornfields, etc.

No wonder the Rock Island "C.T.X." Universal has become the sensation of the farming world. *Yet it costs practically no more than the average plow!*

(115)

WRITE! Send your name on a postal today and get, by next mail, the complete story of the Rock Island "C.T.X." Universal. All about how it's made, pictures of its different parts, etc. We will also send you the name of your home merchant who sells Rock Island Implements, so you can go see this plow and judge it for yourself. Just write these words on your postal, Am interested in plows. Then sign your name and address and send the card to

A Corn Grader—A Grain and Grass Seed Cleaner

Two Machines in One.

It's exactly what you get in the Newton grader and cleaner. It grades corn in a most satisfactory way. Cleans and grades all kinds of grass and field seeds. Hundreds in use on the farms of successful farmers.

The Newton

Separates Oats from Wheat.

No other grader on the market will give you better work than the Newton. Few will come anyways near doing the work it will do.

Ungraded Seed Doubly Unprofitable.

The danger in sowing weak, shriveled grains does not lie alone in the fact that they do not grow, but by leaving vacant space you allow weeds to get a start which injure neighboring stalks. With the Newton grader you take out the light and chaffy grain, leaving only the plump, well-matured grain for seed. Grading your grain this year should save the price of our grader on the larger yield of the season's crop, and the grader will last many years. Don't take our word for it. Ask the college experts and they will tell you we are right.

Get the Newton Catalog Write us today and get circular telling all about this simple, practical, big-capacity corn grader and grain grader and cleaner—two machines in one. It tells all about its many points of advantage over other machines.

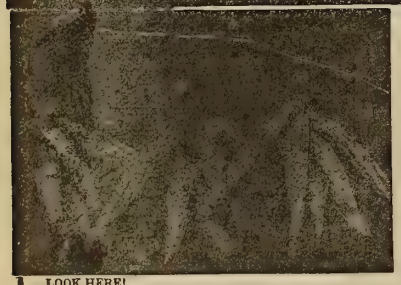
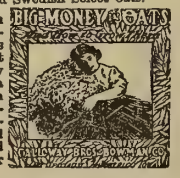
BIG MONEY IN OATS AND HOW TO GROW THEM



THAT IS THE TITLE OF OUR NEW **FREE BOOK**

which we send you for the asking, together with a free sample of our pure Canadian Grown Regenerated Swedish Select Oats.



This book was written by William Galloway, Professor Bowman, and other seed experts. It contains priceless information—worth real money—about how to make big money in oats; how to make a seed bed; how to start a seed patch, how to make oats stand on rich ground and how to grow a bumper crop of oats. It is profusely illustrated by photos from actual life, and contains besides facts, figures and opinions as given by farmers all over the country.

Now remember, this book is free for the asking, and we will send it to you together with a free sample of the oats, or better still, enclose ten cents to cover cost of packing and postage, and we will send you a **Big** sample packet, or a **Triple** Size for 25c, and for 50c, a packet **three times the size of the 25c packet,** and what is more, the empty packets will be accepted the same as cash in part payment on any future orders you send in.

LOOK HERE!
Three kernels in a pod, from an actual photograph as grown on our big Canadian Seed Oats farm.

You can raise 75 to 140 bushels to the acre with our seed. Imported direct from Canada. Extra fine. Send for free sample. It speaks for itself. Our customers who bought from us last year raised from 75 to 140 bushels to the acre against one-eighth to one-half as much from their old seed, which proves our statement that farmers need a change of seed in this country.

We specialize on **extra fine Seed Oats** on our big Canadian Farm—new, clean land—and grow the **Genuine Regenerated Swedish Select Oats** which has **broken all records.** Specially bred to suit climatic and soil conditions in the U. S. Matures from 12 to 15 days earlier than other kinds. Extra large white berry. Thin husk. Stiff straw. Tremendous yielder. Rich in protein, and just the oat you have been looking for.

Why not start a seed patch on your farm this year? It has paid others big. It will pay you.

Write us early. The demand for our seed is tremendous. Last year we had to return orders we could not fill.

Write early. Demand tremendous. Supply limited.

Feed Your Oats to the Horses or Hogs, or Sell It

You can afford to do it when you stop to figure up the net results between our seed and ordinary seed. Which is cheaper—**Genuine imported Regenerated Swedish Select Oats** that germinate nearly 100 per cent—every oat sprouting—Fresh, Hardy, Full of **Life and Vitality**—or oats that are half hulls full of weaklings, that plainly prove they are inferior and run out? Our thoroughbred Imported Canadian oats cost a little more than common seed at the start, but if you paid twice the price and received common seed for nothing, our oats would be cheaper and bring you the most profits. It's **net results** that count.

J. E. Andrews, Dassel, Minn., writes: "Yielded 105 bu. to acre." Oscar Kling, Alamosa, Colo. writes, "Yielded 141 bu. to acre." H. Hendrick, Roanoke, Ill., writes, "Got 95 bu. from one acre." A. J. Barber, Clinton, N Y., writes, "Galloway, you are right. Last spring I bought some seed oats of you. Just threshed. Yielded 80 bu. per acre.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

PREPARE TO SPRAY THE FRUIT.

To the Editor of The Homestead:

Every grower of fruit whether he be orchardist or farmer is coming to realize that perfect fruit is not the result of chance, but of careful culture and spraying. If one will have fruit that looks and keeps well, he must keep it free from worms, scab and rot, otherwise he cannot expect large profit. Spraying has proven the best remedy for all injurious diseases and a destruction to insects.

There are a number of useful sprays for insects and injurious diseases. A limewater wash may be made with twenty pounds of quick lime, fifteen pounds of sulphur and fifty gallons of water. Place over a hot fire a twenty or thirty-gallon kettle. Pour ten gallons of water into this and when water is slightly warm pour in the lime. Add some water now and then to keep the slacking lime from sputtering. While lime is slaking dissolve the sulphur in enough water to make a kind of paste, and when the lime has become pasty pour in the sulphur and boil and stir constantly for forty minutes or until the mixture has become a dark red. Now take from the fire and strain from a fine strainer and add fifty gallons of water. Stir thoroughly until it will do for the spray pump. Use at once, for if allowed to stand it will lose its strength. For a summer wash this mixture must be dilated one-tenth.

Bordeaux mixture is made of copper sulphate (bluestone), five pounds; quick lime, five pounds, and fifty gallons of water. The copper sulphate should be put into a sack and suspended in a barrel of water near the top. To form a stock solution 100 pounds of copper sulphate should be dissolved in fifty gallons of water. Thus one gallon of water would contain two pounds of copper sulphate.

To make a stock solution of lime, slack a given weight of lime in a trough or box. Slake slowly with the least amount of water. Add enough water to make a putty mass, then cover with water to exclude the air. Now it can be used as needed. As lime has been weighed it will be easy to determine the amount to use. Take out the desired amount of lime, mix with twenty-five gallons of water. Likewise mix the desired amount of copper sulphate in twenty-five gallons of water. Then pour the lime mixture through a cloth into the copper sulphate mixture and churn together well and use immediately.

A kerosene emulsion may be made from a half pound of hard soap, two gallons of kerosene and thirty gallons of water. Shave the soap fine and dissolve it in one gallon of water by boiling. After removing from the fire add the kerosene and mix thoroughly and pour in the rest of the water.

An arsenate lead mixture may be made by adding four pounds of lead arsenate to 100 gallons of lime sulphur mixture, summer strength, or to a like number of gallons of the Bordeaux mixture.

The lime sulphur wash should be used for scale insects when leaves are off the trees. Use the summer strength when the buds first begin to open and throughout the summer and fall. The summer solution of lime sulphur and arsenate of lead may be used for insects and plant diseases. The bordeaux mixture is good for apple scab, various rusts and fungus diseases. For apple blotch and black rot on grapes the bordeaux is preferable to the lime sulphur mixture. It has been discovered that the lime sulphur will renew the bark on old trees and thereby increase the vigor of such trees.

The kerosene emulsion is death to the woolly aphis on young trees and plant lice on melon vines. During the winter the lime sulphur, winter strength, should be used in spraying for the San Jose scale and the winter stages of plant diseases. When the blossoms begin to fall the bordeaux or lime sulphur mixture with arsenate of lead should be used to kill the apple worm of the coddling moth and at the same time the canker worm. This puts the poison into the rose

SUPERIOR

GRAIN DRILLS

WARRANTY—Castings replaced FREE any time—in one year or 20 years if shown to be defective. Disc Bearings replaced FREE if they ever wear out. Every Drill guaranteed to be and do ALL WE CLAIM.

Ask your local dealer to show you the OSCILLATING DRAW BARS on a Superior Single Disc Drill—the exclusive patented device that gives such great clearance—that allows the discs to sow around obstructions, not over them. **Send for the Superior Catalogue.** Go to your local dealer and insist on seeing the drill that puts the seed in the ground—that "Drills the grain to grow again." Picked in September, sure growing, big yielding, Reid's Yellow Dent, Johnson County White, Leaming, Improved Silvermine, and Bloody Butcher, grown by us on Sunnyside Seed Farm which we own and operate ourselves. Send today for the free corn book giving full particulars, prices, etc.

McGREER BROS., COBURG, IOWA.

end of the young apple from which the apple worm gets its first meal and on the leaves of the tree where the canker worm feeds.

It is a good plan to spray every five or six weeks for apple scab, apple blotch, etc. By the liberal use of these spraying materials the orchard should be kept free from disease and the ravages of insects and if season is favorable bring forth fruit to perfection. W. D. Neale.

ONIONS A PROFITABLE CROP.

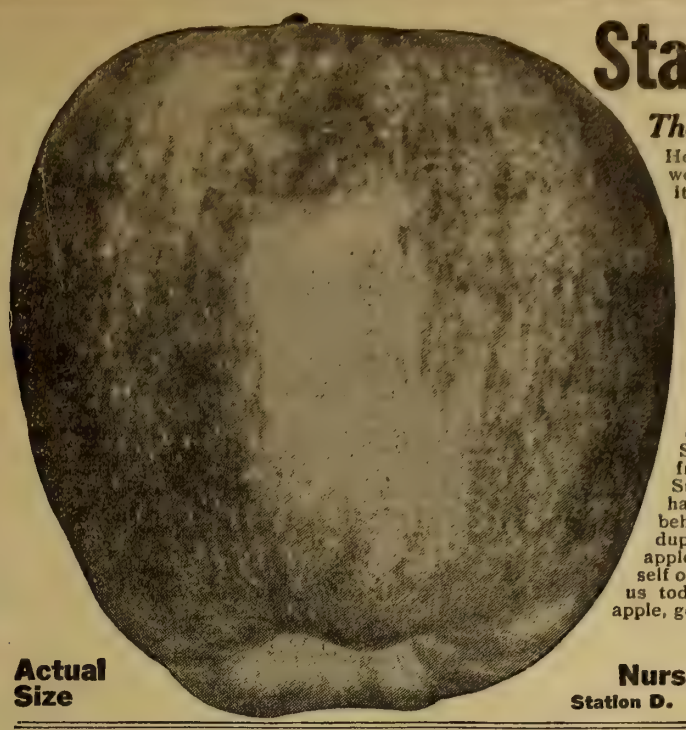
To the Editor of The Homestead:

I find onions a very profitable crop to cultivate if one can spare the time or can procure the proper help. The greatest cost of onion culture is the great amount of labor connected with it. This labor is not, however, of an overtaxing nature and can be done by women and children. I know a girl who cleared $200 on a half acre of land while following her doctor's orders to be outdoors as much as possible. Under the very best conditions onions have been known to yield as high as 1,000 bushels to the acre and the market can be depended upon since this country has to import a large quantity every year. The farmer who will not give his wife or children a half acre upon which to grow a special crop of this kind is hard hearted indeed. Yet it is these little things which the children can call their own which give them an interest in farm life and are a forceful and important element in solving the problem of keeping them on the farm. Besides they acquire a great deal of practical knowledge in this way.

I prefer the transplanting method of onion growing, as I have had by far better results with this method than when seeds are planted direct in the field. Onion seeds are very slow in starting and the plants grow very slowly at first. If planted in the field there is much difficulty in keeping the weeds down until the onions are large enough to mark the row and thinning out the plants after they get started is just as tedious as transplanting the plants. When seeds are started in the field often a dry spell comes before the bulbs have completed their growth and an inferior crop results. With the transplanting method the plants can be set out as soon as the soil is ready for them and are ready to start immediate bulb growth. Moisture is the most essential element in onion culture and by this method the bulbs can get their growth during the period of spring moisture. Maturing at least six weeks before, those started in the field they safely make their growth before the dry period of the year can do much damage.

For best results with onions the soil should be a rich mulch with humus enough to hold plenty of moisture and make the soil friable and of good texture. I prefer to plow in the fall and allow to lie in the rough over winter. The soil is well fertilized before plowing. The action of the frost upon the soil is very helpful in procuring the proper bed. The bed can be prepared earlier and better than when plowed in the spring. In the spring no pains is spared in preparing the bed. It is harrowed and worked until the surface for a depth of several inches is as fine and smooth as for a flower bed. The condition of the soil means much and if it is good goes a long way toward producing large and uniform bulbs.

The seeds are planted thinly in boxes which are kept in a warm well-lighted attic, during the latter part of February or early March. They are kept well watered and if they come up too thickly should be thinned. The seeds may be sown in hotbeds also. As the time for transplanting nears the plants are hardened by more exposure, ventilation and withholding water. They are then about the size of a lead pencil and tops and roots are trimmed before planting in the field. This is some time during April and the transplanting means quite a little labor. Much time can be saved and much labor averted in laying out the plot by running a cart wheel, into which, after removing the tire, wooden pegs three inches long and four inches apart have been placed along the line. The line in-



Actual Size

Stark Delicious Apple

The Most Talked About Fruit in the World!

Here's an *actual* size Stark Delicious—the finest apple in the world. The finest *fruit* in the world! For profits you can't touch it with *two* of any other variety. "The Ginter Co., of Boston, are getting 20 cents a-piece for Stark Delicious," says A. D. Birchard, Suffolk County, Mass. "Have received as high as $5 50 per box for Stark Delicious apples," says M E. Stewart, Chelan County, Wash. Are you getting anything like that for *YOUR* apples?

FREE BOOKS! WRITE TODAY Your orchard soil will grow handsome Stark Delicious apples. Your orchard can be made over from a moderate producer to one of the biggest paying places in the country. Your apple profits can be doubled and even trebled with Stark Delicious apple tree results—but, remember, it is only a Stark Brothers tree that can make and break bumper crop records. It's only the Stark Delicious apple tree that can produce this, the best of all fruit, and there is none other but a Stark tree with this name. Stark Delicious is an exclusive Stark Brothers apple tree—it has 100 years of expert apple tree propagation and experiment behind it—and no other nursery in the world will ever be able to duplicate Stark Delicious trees. You can plant Stark Delicious apple trees in your orchard, however—and you're cheating yourself out of your full share of orchard profits unless you do! Write us today, learn more about the Stark Delicious apple, get our free books

BIG FREE BOOK ON ALFALFA

HOW TO GROW IT ON YOUR LAND

"Alfalfa—Wonder Crop," is the title of a new book just issued by us. It contains a fund of priceless information on alfalfa growing secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. This information was secured at a great cost of time, money and research, and yet it is yours for the asking **without cost.** This book will convince you that your farm has some land on which you can grow alfalfa; it tells how to get results from the first planting, how to select the field and prepare the soil, including fertilizing, plowing, liming, and how to prepare the seed; when to plant, how to plant. It tells you what to do during the growing period, how to get bigger than average crops, and how to cut and cure. This book is worth many dollars to the farmer interested in growing alfalfa, but we gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

sures straight rows and the pegs make holes for the plants every four inches. This little device saves much more labor than one would think. The rows are placed about fourteen inches apart. Cultivation begins at once after the plants are started and should continue all through the growing season. My rule is not to tolerate a single weed. My favorite implement is a narrow wheel hoe, and others I use are the onion hoe, hand dibble and weed hook. The onions make rapid growth during the spring period of abundant moisture and all mature and dry up about the same time. When the tops wilt and turn yellow it is time to harvest the crop. The bulbs are pulled and left in windrows several days until cured. The tops are then twisted off and the bulbs crated. Bulbs of a uniform appearance sell best and all imperfect and small ones are kept by themselves and later disposed of according to their worth. After crating the onions are stored in a cool and well ventilated shed until marketed. There is never any difficulty in selling at good price. Our country does not begin to grow enough for her own use and while such a state exists we may reasonably hope for the price to remain good. The yield too is good if attention is paid to the crop and conditions are not too adverse. I do not advise every farmer to raise onions, but only such as can give the crop the cultivation and attention that it must have to produce success. With care and work it is always a very, very profitable crop, with neglect always as a rule a failure. C. J. Griffing.

THE HARDY COTTONWOOD.

To the Editor of The Homestead:

Have you ever noticed how early a cottonwood tree sheds its leaves and begins to ripen and harden its buds and twigs in the autumn? Fully a month before the oaks begin to get rid of their leaves you will find the limbs and twigs of cottonwood trees perfectly bare. This is the reason they are such hardy trees, and why they are adapted to such a wide natural range. You will find them growing all the way from the gulf coast to the Canadian boundary, and still further north for all I know.

Their adaptability to such a wide range is due more than anything else to their early shedding of leaves and toughening of their tender twigs and bud. Any tree is a hardy tree which ripens its buds early, provided the buds do not begin to swell too early in the spring. The black walnut also ripens its new wood early in the autumn, but it is not so hardy as the cottonwood, because the buds begin to swell and the tender leaves to form rather early in the spring. But this early swelling of buds may be prevented by putting a thick covering of old straw, hay or leaves upon the snow or frozen ground under the trees in the late winter, thus keeping in the cold and preventing the too early starting of the sap upward, no matter how mild and sunny the late winter afternoons may be.

Few other trees are so valuable on a northern farm as a grove of cottonwoods. They grow very rapidly, and produce a tremendous amount of firewood and fence posts of fair durability, as well as rough timber and lumber for any purpose needed on the farm. They grow thickly on bare, sandy land, and in rather dry localities too, provided the young trees can get a little moisture by some means for the first few years, until their roots have struck down deep enough to reach soft, loose strata of sand or other friable soil. I. Motes.

SOME SIMPLE SPRAYS.

To the Editor of The Homestead:

The farmer who knows how to make simple sprays for vegetables, berry vines and fruit trees will not only save his crop, perhaps, but save a lot of extra expense in the purchase of spraying mixtures prepared by others.

A simple spray, easily made and death to beetles, bugs, moths and worms is a strong solution of tobacco. Take a plug of some strong, dark tobacco, cut it into thin slices or strips and steep or simmer in hot water for five or six hours. A pound plug should make twenty-five or thirty gallons of spray. If you have only a few berry bushes, young fruit trees,

Is Your Home Sheltered?

Save dollars by saving heat. A wind-swept home is a cold home. Shivering cattle take on no fat. Cold hogs make the smallest gains. Wind-tossed chickens lay no eggs. Protected gardens get the earliest start.

BIG FREE BOOK ON CLOVER

A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and milk. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; all about the causes of "clover sickness" and how to deal with it. Hundreds of other questions, covering sixteen clover varieties, are fully answered. Ordinarily this book sells for 35c, but for a short time we will mail a copy free, or until a certain number have been distributed. Write at once.

GALLOWAY BROS.-BOWMAN CO., BOX 108 K WATERLOO, IA.

potato vines or other low vegetable growths the mixture can be applied with a large hand sprinkler. It should not be applied to berry bushes, or to peas or beans when the berries or vegetables are nearly ready to be gathered. This is especially good for potato vines attacked by bugs, flea-beetles and the like insects.

For blackleg, causing the stems of potatoes to rot, plant only clean seed potatoes. Disinfect the seed by soaking two hours in one pound of formaldehyde and thirty gallons of water. Dry, cut and plant as usual.

Bordeaux mixture is made by mixing five pounds of copper sulphate and five pounds of fresh lime in fifty gallons of water. This is good for mildew blight on potatoes. If it is desired to kill potato bugs at the same time add six ounces of Paris green. Or if you desire to use Paris green alone for bugs use the six ounces with one pound fresh lime in fifty gallons of water.

For Colorado beetle spray with arsenate of lead, made as follows: Arsenate of lead twenty ounces, arsenate of soda ten ounces, dissolve separately and pour one after the other into a barrel containing fifty gallons of water. This preparation also destroys fleabeetles, small flea-like beetles which eat holes in the potato leaves.

WOODROW WILSON TO THE FARMER.

The farmer has not been served as he might and should be. We have set up and subsidized agricultural schools, horticultural schools, schools of poultry raising, and the rest, and they have done excellent work. Our support of them should be hearty and generous. But a more effective way still has been found by which the farmer can be served. Lectures and schools and experimental farms attached to schools like laboratories are excellent, but they do not and cannot of themselves push their work home. Some states have gone much beyond this and we should follow them with zest.

The thing that tells is demonstration work. The knowledge of the schools should be carried out to the farms themselves. Dr. Seaman A. Knapp found the way when he was sent into the South to fight the boll weevil. Choosing a good farm and a good farmer here and there, he showed the farmer how to cultivate part of a field, gave him simple fundamental directions, brought him selected seed, and made frequent visits afterward to see that his directions were carried out. Of course the neighbors promptly took notice and the next season did the same things, with the same results—good crops, earlier crops, crops that the weevil was no match for.

And fighting the weevil was only an incident. The work grew in every direction—not work in the schools, but work suggested and directed by men sent out from the schools to take science to the farm, until the agricultural department could not supply the men called for from every direction. The countryman began once more to come into his own. When the farmer does fully take science into partnership and become his own master and fortune builder, the day will be gone once for all when the townsman can tax him and ignore him and absorb unto himself the powers of government at his pleasure.

It does not require a great deal of money to train men and send them out for this work; and when once it is begun it goes on of itself. Private persons, voluntary independent associations, county authorities take it up. It is a thing that gives life as it goes. It awakens countrysides and rouses them to take charge of themselves. It is not help from the government, it is merely light from the government. The light does the rest. We should give ourselves the pleasure, the pride and satisfaction of putting New Jersey forward to set an example in this truly great and intelligent work for relaying the foundations of wealth and prosperity in the United States.—[Woodrow Wilson to the New Jersey Legislature.

Always on Guard

No matter where a ship may be along the American coast; no matter how dark, or cold, or stormy the night, the coast guard is on watch, patrolling the nearest beach or rocky cliffs.

This man, always on guard, could, by his own unsupported efforts, do little to save life, or to guide ships away from perilous points.

As a unit in an efficient system and able, at a moment's notice, to command the service of his nearby station, he becomes a power to whom all ship owners and passengers are indebted.

In the same way, the Bell Telephone in your home and office is always on guard.

By itself, it is only an ingenious instrument; but as a vital unit in the Bell System, which links together seven million other telephones in all parts of this country, that single telephone instrument becomes a power to help you at any moment of any hour, day or night.

It costs unwearying effort and millions of dollars to keep the Bell System always on guard, but this is the only kind of service that can adequately take care of the social and commercial needs of all the people of a Nation.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

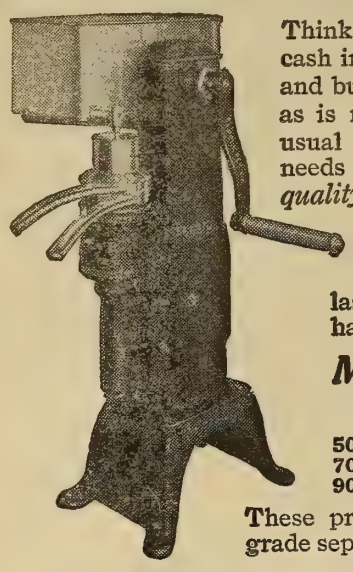
"STANDARD" Cream Separators

700 lb. Capacity $56.50 Spot Cash



Think of it! The dairyman with spot cash in his pocket can now go to his dealer and buy as high grade a cream separator as is made for little more than half the usual retail price. The "STANDARD" needs no introduction. It is a *high-quality machine* of well-known manufacture. There are over 30,000 now in actual use. Made for years in our own factory. Guaranteed to last as long and skim as close as any hand machine made.

Mail Order Price But Not a Mail Order Product

500-550 lb. Cap., $47.50. Reg. Price $ 75
700-750 lb. Cap., $56.50. Reg. Price $ 90
900-950 lb. Cap., $63.50. Reg. Price $100

These prices are unheard of for any high grade separator sold through reliable dealers.

Sold Only Through Dealers

We enable our dealer to meet mail order competition by making and selling a large output of machines at *cash with order prices.* Our manufacturing cost is low; we get our money promptly and save the expense of having salesmen. The dealer in turn sells for spot cash at a low margin of profit. For these reasons he can meet mail order prices (capacity and quality considered). and still give his customer dealer service, a chance to see the machine before he buys it, and in addition

A Liberal Free Trial

If the "STANDARD" does not hold its own with *any high priced* machine on the market, you can return it to the dealer and get your money back without a quibble. You won't have to argue. We see to it that he refunds your full purchase price.

Write us for catalogue fully describing the "STANDARD", and for *money-back Guarantee,* and give us the name of your dealer. We'll do the rest—without in the least obligating you to buy, unless you want to.

NOTE: For herds of more than ten cows we recommend using the self-powered "AUTOMATIC." It requires no cranking; is driven by a self-contained gasoline engine of remarkable efficiency. Bowl spins at high, even speed, without a trace of vibration. A great labor saver. Used by thousands of up-to-date dairymen in this country. Write for our "AUTOMATIC" catalogue and testimonial letters. They will surprise you. If you are milking but six or eight cows, buy the hand-driven "STANDARD" at mail order price now, then trade it in later for an "AUTOMATIC" when your herd becomes larger. We will make you a liberal allowance through your dealer.

STANDARD SEPARATOR COMPANY, 317 Pereles Building Milwaukee, Wisconsin

This Famous Door Makes Silage Feeding Easy

The most important part of a silo is the door. On it depends your *convenience* and *safety* in every day use. That's why *no silo on earth* can compare with *the Hinge Door* Silo for *genuine satisfactory service.* Think of the convenience of keeping your silo doors closed air-tight the year around. Protects your silage from freezing in winter and drying out in summer. The Hinge Doors can be opened and closed with one arm easier than your barn doors. Doors can't bind, sag, stick or freeze in, because they set against the door frame instead of into it.

Write for book about

has more good points to its general construction than you ever believed possible.

Malleable iron ladder formed by the big hinges makes the safest ladder ever put on any silo. 7-inches for hand and foot hold; all steel door frame — heavy Billet steel hoops—staves of first clear lumber—tongued and grooved full ⅝ inch—weatherproof steel spline—strong anchors base.

Lansing Silos

The far-famed silo manufactured in Lansing, Mich, now sold exclusively by us with many improvements in its construction. With the exception of the door feature it has practically the same high grade construction we have incorporated into the Hinge Door Silo.

Your choice of two famous silos. You will be overlooking your best interests if you don't write us at once for full facts.

Silberzahn Silage Cutter

Sold exclusively by us, west of the Mississippi river. Many valuable improvements this year. Cuts any kind of forage. All facts clearly told in our catalog.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

CO-OPERATIVE BUYING OF BULLS

To the Editor of The Homestead:

Recently a community was visited which is famous for producing good Holsteins. Upon inquiry as to the best breeders we were referred to a farm where two brothers kept a pure-bred herd. Along with a herd of most excellent cows we found a bull of remarkable merit. Not only was the bull a good one as an individual, but had in his pedigree a large number of the best producing females in the eastern states. After numerous comments we inquired the price paid for the animal, "Twelve hundred dollars, a company of us own him. The members of the company have eighty or more cows and we figure that the increased value placed on the offspring by the fact that they have been sired by this excellent bull will bring us good returns on our investment. We have some very good cows, but it seemed that if we were to improve beyond a certain standard it would be necessary to do so by the use of a high-class bull. We screwed up our courage and bought the best we could find," was the explanation given us.

What those men are doing any community can do. They had in mind one central idea, improvement. All progressive farmers are seeking that same end. Improvement of dairy cattle must come largely through the use of better sires. If we use sires of mediocre merit we shall produce calves of corresponding value. Of course it is not advisable for an ordinary community of farmers to pay $1,200 for a bull. Yet they must secure an animal of higher merit than the cows else no improvement will come. Let us suppose that five men join together in the purchase of a really good bull. The price is divided by five. A much better individual animal is secured and often for a smaller investment per man than if each purchased a cheap grade mongrel or scrub or even an inferior pure bred. Whatever the price a pure bred must be secured for he is far more likely to transmit his qualities to his progeny.

Company or co-operative bull buying leads to several advantageous things. In the first place if the right sort of an individual is secured it means that the owners and users are well started on the road to better cows and more profitable farms. Then it insures that one and the same breed will be kept in the locality. This gives the neighborhood a reputation for cows of that breed and naturally attracts buyers thither. This is true of grades as well as pure breds. The present day demand for good grade cows is very satisfactory and possible profits from cows is not to be overlooked. Another item to be considered is that only one bull instead of several are to be fed and cared for. It costs from $25 to $60 to feed a bull for a year besides the labor and maintenance of his shelter. So if a number are eliminated expenses are cut down and profits correspondingly increased.

A plan that has been started and which bids fair to grow in favor, is for a larger community to purchase three bulls. They are, of course, of the same breed and similar in breeding and value. Each of the three is located in one locality where he will be most readily accessible for the farmers in that one-third of the community. After two years when each bull has heifers old enough for service the bulls are changed so that each one replaces another. In that way inbreeding is avoided. At the end of another two years or four years after the beginning, the bulls are moved again for the same reason. hus six years' service is secured from each bull for one original purchase price. At the end of six years if any of the bulls have proved themselves to be exceptionally good breeders they can be retained and used for a longer time.

It often happens that good bulls are sold off before their real value has been demonstrated which cannot be until they have heifers in milk. This plan of buying three bulls and using them for six years meets that condition as no other plan can pos-

WESTERN SILO CO., 100 11th St., Des Moines, Ia.

sibly do. The men in the company who handle the bull first mentioned in this article sold off a bull in that manner. A couple of years later when several of his heifers had gone through a yearly test it was demonstrated that his heifers were an unusually high-class lot of producers. The owners would have given a great deal to have been able to secure the return of that good bull, but he was gone. The three bull six-year co-operative plan would have retained him until after his real merit had been proven. Then he could have been used until quite an advanced age bringing lasting improvement to the cattle of the locality. One community where such a plan was established last summer figured that $2,000 was saved in the purchased price of the bulls over the plan formerly in vogue. Important as that is doubtless the improvement in the quality of the cattle will be much greater.

H. E. McCartney.

SHALL WE MAKE BUTTER?

To the Editor of The Homestead:

Several men have told me lately that they were convinced that there is more money in making the farm milk up into butter than in selling it for milk. These men, too, are farmers who have tried both methods. At a meeting of practical men the other night, an old farmer who has made money at it said he believed the right way, the best way, to dispose of milk is to put it into butter; then if we can sell it pretty nearly direct to the man who eats it, we have the problem pretty much solved.

You see there is this about selling milk for shipment to the big cities. The man who does it practically sells his farm by piece-meal. He gets no milk back to help him grow calves or hogs. He must buy his cows if he wants more when the old ones are gone. He must spend hours every day getting his milk to the station, hours right out of the heart of the day.

Where a man makes up his own milk, the milk all is saved for the calves and the hogs. It can be fed warm, which is a bigger thing than most of us understand, and so greater good can be gotten out of it. It is true the creamery will enable one to get milk back, but it is not always pure milk after all, unless it comes from a creamery that rejects the milk of cows which have not been tested for tuberculosis. Many a herd has contracted that fearful disease by feeding milk that has been taken from diseased cows.

I have in mind now a man who is building his farm up by making milk into butter this way. A few years ago his place was one of the most common in all this section of country. Now he has a little city of his own, with buildings all nicely painted and kept up well. There is now no better farm anywhere in the county than that is.

And it is my experience that wherever men are engaged in keeping cows and making the milk into butter the same thing is true. The farms are well kept and men are making something. I doubt it this is quite so generally true where the milk is all shipped out of the country. And another thing I am sure of, and that is that if one is so situated that he can make his milk up right at home, there will come to him many other ways of taking in money, such as for eggs and fruit and other farm produce. Few farmers establish a customer for butter in town that he does not have an outlet there for many other farm products and this is no small source of revenue.

A MISSION FOR SHORT-HORNS.

To the Editor of The Homestead:

Less than a generation ago it was the prevalent opinion among farmers that they were not in need of and could not be helped by scientific agriculturists. Among many "book farming," as they termed it, was held in contempt. It is true that agricultural education at that time was in its infancy and was very incomplete, but it held the principles on which a broad and helpful system of scientific agricultural education was afterward developed. The sons and grandsons of men who had no patience with "book farming" have gone to agricultural schools and obtained the knowledge necessary to enable them to intelligently undertake the various problems of farm life, the restoration of soil fertility, the introduction of better varieties of grain and the improvement of live stock. Tedious and costly experiments, conducted at state and national expense, have introduced varieties of wheat that are hardier and more resistant to frost and that add materially to the annual productive value of the land. Other experimenters have introduced new varieties of cotton with longer fiber of better quality, while still others are experimenting to increase the disease-resisting powers of both plants and animals.

All these efforts are worth while and many have already increased the knowledge and wealth of the agricultural class. Very few farmers have the time or convenience to conduct such experiments as these, but all farmers should have the ambition to improve methods, grain and live stock. The farmer who increases the productive value of his land either by restoring soil fertility or by raising better grain gains a personal success and to a limited extent becomes a public benefactor. If this be true of the grain farmer what can be said of the progressive stock grower? There never was a time when there was as great need of growing two pounds of beef where only one grew before. Such a marked increase may be possible only in some instances, but very great improvement is needed in the cattle of the majority of farms. The scarcity of beef cattle and their resultant high value will surely stimulate their production on farms from which cattle were eliminated by the low prices of fifteen years ago. In restoring cattle to the farms, it will be an improvident and unwise man who will be content with cattle of indifferent quality. Feed has been high and will not likely be low again for some years, hence only well-bred cattle that give good returns for feed

Perfection Fairfax, the remarkable Hereford sire. A first-prize winner from a calf up to grand champion as a four year old. A sire of show cattle of such high merit that they have won first in get of sire class wherever shown during the past year. Sons and daughters of this great sire and cows bred to him are features of the sale of Hereford cattle to be made at Kentland, Ind., on Wednesday of next week, February 26th, by Warren T. McCray.

SEE AND TRY A
DE LAVAL
CREAM SEPARATOR

Be Your Own Judge

We cannot believe that there is a sensible man living who would purchase any other than a DE LAVAL Cream Separator for his own use if he would but SEE and TRY an improved DE LAVAL machine before buying.

It is a fact that 99% of all separator buyers who do SEE and TRY a DE LAVAL machine before buying purchase the DE LAVAL and will have no other separator. The 1% who do not buy the DE LAVAL are those who allow themselves to be influenced by something other than real genuine separator merit.

Every responsible person who wishes it may have the Free Trial of a DE LAVAL machine at his own home without advance payment or any obligation whatsoever. Simply ask the DE LAVAL agent in your nearest town or write direct to the nearest DE LAVAL office.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

Pure-bred Registered
HOLSTEIN CATTLE

Though they hold all milk and butter records, after all, the chief consideration leading a man that understands cattle to choose Holsteins is their great strength and constitutional vitality. For that is the source of their power to produce such large quantities of milk for long periods and to produce it at little cost. Their great strength makes them economical feeders; they have good appetities and digestive powers that allow them to make profitable use of roughage that more delicate cows refuse to eat.

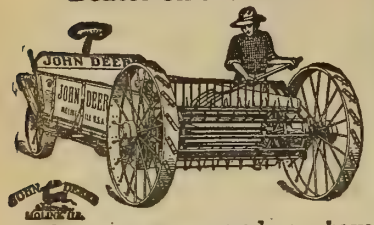
John Deere Spreader

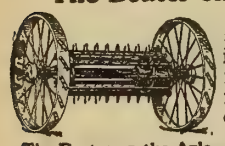
The Spreader with the Beater on the Axle



Take any manure spreader you have ever seen, remove all the clutches and chains, all the countershafts and stub axles, do away with all adjustments and mount the beater on the rear axle.

Rebuild the spreader so that the top of the box is only as high as your hips. Make it stronger. Remove some two hundred trouble-giving parts and throw them away. You will have some sort of an idea of what the John Deere Spreader, the Spreader with the Beater on the Axle, is like.

The Beater on the Axle



The Beater on the Axle

The beater and all its driving parts are mounted on the rear axle. This construction is patented. You cannot get it on any other spreader made.

Power to drive the beater is taken from the rear axle through a planetary transmission (like that on automobiles). It is positive, runs in oil, and does not get out of order.

Few Working Parts

The John Deere Spreader is so simple that there are no adjustments. It has some two hundred less parts than the simplest spreader heretofore made.

Out of Gear

There are no clutches to throw it into gear. The lever at the driver's right is moved back until the finger, or dog, engages a large stop at the rear of the machine. All the chains and adjustments have been done away with.

Only "Hip-High"

Easy to Load

Because the beater is mounted on the rear axle, it is only "hip-high" to the top of the box. Each forkful of manure is put just where it is needed. You can always see into the spreader.

Roller bearings, few working parts, the center of the load comparatively near the horses, and the weight distributed over four wheels, make the John Deere Spreader light draft.

Spreader Book Free—*Tells about manure, when and how to use it, how to store it, and a description of the John Deere Spreader. Ask for this book as Package No. Y.27*

John Deere Plow Co.
Moline, Illinois

consumed and that contribute to the wants of the farmer will be profitable. Not every farmer can breed pure-bred cattle, but none can afford to raise scrubs.

Under present prospective conditions raising beef cattle on the farms will give a handsome profit. As a foundation for this industry Shorthorns are well adapted to every purpose. A searching test of more than 100 years in this country has fully demonstrated their worth. They are docile in disposition, they mature early, fatten easily and when matured have greater weight than others. For the production of beef and milk they are the farmer's cattle.—[B. O. Cowan, Long Beach, Cal.

VACCINATING HOGS TO STAMP OUT CHOLERA.

ARTHUR SAMPSON, Fulton county, Illinois.—I am not an editor nor a maker of serum, but I positively believe that vaccination properly done with serum that is potent will in the future almost wipe hog cholera out of existence. But I also believe that a great many mistakes will be made before all veterinarians and makers of serum become experts in that line. In the fall of 1911 cholera was all around me. My neighbor's hogs, just over the fence from mine, were sick. One of my sows took it, and I vaccinated the rest of them with serum, giving each sow 20 c.c. per 100 pounds weight. These sows all slept with the one that was sick and none of them lost a feed. I also vaccinated some shoats and allowed them to drink slop from the same pail as the sick one and none of them lost a feed. One, however, did not seem to do extra well. The next fall this same neighbor's hogs took sick and while mine were well I had them treated with the simultaneous method, using the state serum. They were pretty stiff for a day or so, but I never lost one and have had no cholera. The veterinarians both times were very careful to avoid the bone. It seems to me that in Mr. Clark's case there was something wrong somewhere from the different states that advocate the use of serum for prevention of hog cholera have settled upon the fact that it is a success. Of course, I prefer serum made by the state authorities. I have heard of a lot of cases similar to the one mentioned, and I think most of them occurred after the use of serum put out by some private company, although I believe some private companies do put out good serum.

Bred and owned at Limestone Valley Farm, Smithton, Mo. See advertisement elsewhere in this issue.

J. G. CAROTHERS, Des Moines county, Iowa.—There appeared in a recent issue of your paper an article entitled, "The Fatal Results of Vaccination." As I have also had experience in the vaccination of hogs as a preventive of the dread hog cholera I beg to be allowed space in your valuable paper to give my experience, as I feel that in justice to the theory of vaccination I should give my version of this very important matter. On December 1, 1911, I vaccinated 165 hogs, ranging in size from pigs of thirty pounds to hogs of 300 pounds each. At the time they were vaccinated, although my hogs were still in the best of health, my neighbors on all sides and for several miles around were sustaining heavy losses daily. I have a large place, and my hogs were kept up in lots close to the barns after cholera came into the neighborhood. As it seemed impossible to save them from cholera and as there was a chance by vaccinating I decided to risk it, with the result that there was not a hog lost, nor did any of them lose a feed. In the bunch of hogs there was a sow about one and one-half years old that had a very large rupture which took her weight down to about 125 to 150 pounds. We vaccinated her and operated for the removal of this rupture at the same time with the very best results. Antiseptics were used in this case both for cleansing the hogs and for cleansing the syringe between every operation. It appears to me that if a man knew his business there would be no trouble from bruising the bone, as the needle is put into the flesh in such a way as to avoid coming in contact with the bone. Another thing of great importance and to me almost the most important matter in connection with vaccination is the most scrupulous cleanliness of their bedding quarters as more hogs are lost from infection than from any other cause. The only trouble noticed with any of the hogs was that in a few days four or five hogs had lumps on the place where they had been vaccinated, from about the size of a walnut to that of a baseball. We opened these and that was the last of the trouble. Not even a hog was hurt in the handling. The amount paid for the vaccination of these hogs was $85, money I consider well spent, as I never lost a hog or had one sick from cholera, while my neighbors sustained very heavy losses. Although Mr. Clark, who wrote the above-mentioned article, was very unfortunate, and I sincerely sympathize with him, still I feel that this case was an exceptional one, calling for an experienced veterinarian or there was something radically wrong with the serum or in some manner the hogs became infected with the poison. I feel that his case is one out of a hundred and am fully convinced of the practicability of vaccination as a preventive of the dreaded cholera. I heartily recommend its use to all stockmen and especially to the poor man, as he is the one who suffers most from the cholera because usually his hogs are his year's work. I hope this will be of help to some one and also that it will encourage our friend, Mr. Clark, to give vaccination another trial.

FRANK E. BOOT, Marion county, Iowa.—In a recent issue of your paper I read an article written by John Clark in regard to the fatal results of vaccination. As we have done quite a lot of vaccinating around here I thought I would give my opin-

Are You Losing Calves?

ion on the subject. In the winter of 1911 and 1912 cholera came into this neighborhood and we, with two of our neighbors, decided to vaccinate. We vaccinated 130 head and then in order to test it we put two hogs that were vaccinated and two that were not from a neighbor's herd that was having cholera into a pen together. The two that were not vaccinated died inside of two weeks, while the other two lived through it without even being sick. This particular neighbor lost 140 head. This fall we three vaccinated all of our hogs, about 350 head in all, and we never lost a hog from vaccination either this year or last. Our veterinarian did not wash the hogs with antiseptic, either. However, I know of serum being used around here that only cost $15, while we paid $36 for what we used. This shows that there is lots of difference in serum, and in my opinion the loss of hogs like Mr. Clark experienced is due to the serum used.

Cures While Horse Works

Madison Spencer's Duroc Sow Sale.

One of the last Duroc Jersey sow sales of the season will be that of Madison Spencer at Audubon, Iowa, on Monday, February 24th, and he will sell about forty-five head in the sale. It is a representative offering in every way and he is selling some splendid sows. No breeder in the state has a better bred lot and they are just in the right condition to buy. In his announcement he says: "I am proud to come before you with such a bunch of sows and gilts, bred to four as good boars as the breed affords, namely, Crimson Chief I., King The Col. II., M. S. Pilot Wonder and Nellie Co. There are sows and gilts going in this sale that we have refused to price. In fact, we have reserved all our sows and gilts for this sale. We are making one great effort to put nothing but good ones in this sale, and if you attend we will guarantee you a square deal. There never was a by-bid made in my sale. If you bid on a sow you are not bidding against us, and if a sow fails to be in pig I don't ask you to accept a per cent, but you send me the sow and I will return every cent of your money paid for her. This offering consists of tried brood sows, fall and spring yearlings and early spring gilts. The aged sows are all good producers and have been money-makers for us, and we believe they will make money for their buyers. They are big, stretchy sows with lots of bone and will surely do the buyer good, for every one is a good one. The gilts carry lots of bone and size and have good quality. They are not loaded with fat, as we are not feeding for fat, but are feeding lots of oats and shorts and give plenty of range. I have no doubt but there will be many sales this winter and spring that will average higher than mine, but I don't believe there will be a bunch of sows sold that will make any more money for their buyers. These sows and gilts have been fed a balanced ration of oats, wheat and corn, with a very little oil meal. For exercise they are fed at the opposite end of the pasture from where they sleep and are allowed plenty of range through the day. The sows that I am keeping for my own use are running right with the sows that I am selling in the sale. The offering will be in good flesh, but not loaded with fat, but you can depend on seeing a good lot of sows in this sale." Bids sent to C. C. Carlin or M. T. White will be attended to on day of sale.

Recent Sales at Bushnell.

Manager J. G. Truman, of the Pioneer Stud Farm, Bushnell, Ill., writes: "Inquiries for strictly high-class Shire, Percheron and Belgian stallions still continue good. Among the sales made by us recently are the following: A Shire stallion to Lawrence Balk, Carroll county, Iowa; a Percheron stallion to Rutgers Peters, Calhoun county, Illinois; a Belgian stallion to William J. McDonald, Bureau county, Illinois; a Shire stallion to Andrew Backlund, Spokane county, Washington; a Percheron stallion to B. F. Allender, Page county, Iowa; a Percheron stallion to Warren Cupp, Iroquois county, Illinois; a Shire stallion to Montgomery & McLeod, Benton county, Iowa; a Percheron stallion to B. H. Dennis, Keokuk county, Iowa; a Shire stallion to E. E. Cooper, Keokuk county, Iowa; a Percheron stallion to John White, Keokuk county, Iowa; a Shire stallion to J. T. Price, Clinton county, Indiana; a Shire stallion to Murray & Spindler, Ida county, Iowa. This is the third Shire stallion we have sold these gentlemen. We also sold imported Shire mares to Frank Boyer, Carroll county, Iowa; John Brand and John T. Castor, Jasper county, Iowa; George Hoover, Huntington county, Indiana, and George Wendell & Sons, LaSalle county, Illinois. These gentlemen are old customers and have one of the largest studs of Shires in this country. Our horses are in first-class condition and anyone wanting a strictly high-class Shire, Percheron, Belgian or Hackney stallion can find what he is looking for here."See advertisement elsewhere in this issue.

Breeders' Sale of Percherons and Shires.

On March 8th, at Malvern, Iowa, will occur the second annual public sale of registered Percheron and Shire stallions and mares, and it promises to be one of the very attractive horse sales to be made this spring. The horses listed in this sale will be contributed by the leading breeders in that vicinity and the sale will be under the management of Fred Durbin. Last spring these same breeders made their first annual sale and it was a great success and they are coming back again this year with a better offering and they hope to interest every farmer and breeder who is thinking of buying a Percheron or Shire stallion or a pair of mares. These horses will be contributed by the following breeders: C. E. Hilton, I. J. Swain, Grant Summers, Henry Parker, Clara R. Stevesson and O. A. Strahan, Malvern, Iowa; R. O. Jackson, Glenwood, Iowa; V. L. Gaston, Tabor, Iowa; J. H. Clark, Imogene, Iowa; C. E. Ballain and W. A. Lang, Emerson, Iowa; J. H. Thompson, Elliott, Iowa, and D. J. Gibbons, Cromwell, Iowa. The horses and colts that these breeders are listing for this sale are an extra good lot throughout and they have been raised by the smaller breeders who live in the vicinity of Malvern, Iowa, and have had good herds. There will be weanling colts in this sale that will weigh 1,000 pounds and stallions that will weigh 2,200 pounds. The breeders who contribute these horses have from one to fifteen mares on their places and by careful breeding and mating are now in a position to sell these horses. There will also be some splendid mares in this sale and it will be an excellent place to buy either a stallion or a pair of mares. Besides the registered stallions and mares they will also sell forty head of high-grade draft mares, geldings and fillies. It will be a great place to buy and those who may be interested should send to Fred Durbin, Malvern, Iowa, at once for a catalog. Kindly mention The Homestead when writing him.

The remarkable success of L .M. Monsees as a breeder of jacks and jennets should in reality be an inspiration to every breeder of pure-bred stock. He has made Limestone Valley Farm, Smithton, Mo., the most noted jack farm in the United States. Those who have followed "jack" history will remember that he was the most successful exhibitor at the St. Louis World's Fair in 1904. The following year his offering by public auction resulted in breaking all records for a jack and jennet sale. Since that time Mr. Monsees, with the aid of three sons, has been bringing about a still greater development in numbers and in the character and quality of his breeding stock. The annual sale of Limestone Valley Farm has become a noted event in Missouri. Having chosen the first Tuesday in March as his sale date this event is looked forward to almost as a state occasion and it is not uncommon to find as many as 1,500 people assembled at this sale. His standing as a breeder of special stock and as a man is best attested by those who know him best—his neighbors. Mr. Monsees' work as a constructive breeder has really placed the jack and mule industry of this country under lasting obligation to him and it is fitting that a word of approval of his work and his methods should be spoken while he is actively engaged in the great work that he has mapped out with such remarkable foresight.

IF YOU WANT SEED CORN THAT WILL GROW

DEATHERAGE has it. We grow our own seed. Our farms are located in Sangamon county, one of the best seed-producing counties in the state. A big breeding plot. A large force of men began gathering seed in September. Germination is perfect, as our seed house—one of the best in the country—is furnace heated. Every ear is examined by an expert before crating or shelling. Reid's Yellow Dent and Boone Co. White shipped on ten days' approval. Six years in the business and not a bushel returned. Send for free catalog. Address Fred E. Deatherage, Box C22, Waverly, Ill.

Think of having the wonder-working power of electricity "on tap" all the time! Father, instead of fussing with a lantern in the barn, now simply presses the button of an electric flasher. Mother doesn't stumble down dark cellar stairs, risking life and limb any longer. She "switches on" a light and goes her way in safety. Son John—the coming "Young Edison"—is making all kinds of electrically-driven apparatus, from a doorbell to a gate-opener. Daughter Mary finds many uses for electricity. Even the mail-carrier presses a button on the mail-box 'way out in the road, which rings a bell telling the folks that there's mail in the box.

And remember this: These things and dozens of others can be done in a jiffy, at small cost, by the use of a few

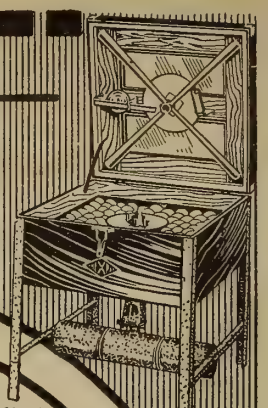
The variable drop planter is all right, particularly for the field where the soil varies. The change of drop can be made without stopping the team, so more seed can be used on rich, bottom land and less over the knolls, where the soil is poorer. One has to keep his thinker working, though, to make the changes as the soil requires.

A New Principle—
Only 1 Gal. Oil to Hatch One Filling of Lamp



Saves Money!

Write today for new Free Book on X-Ray Incubators and Brooders. Learn everything about this time, labor and money-saving hatcher. It is shipped *direct* to you from factory. No agents—no dealers. Guaranteed to please you. Orders filled same day received. Freight prepaid *anywhere!*

THE X RAY

Just takes one gallon of oil to a hatch—one filling of the lamp. Old style machines use 3 to 5 gallons of oil to hatch and lamp has to be filled every day! The X-Ray incubator is built on an entirely new and different principle from the old style, wasteful machines. It has lamp *underneath*, square in the center, where it ought to be—and not on the side where no perfect temperature could possibly be maintained. With lamp underneath X-Ray's egg-chamber is always at even heat—always at a perfect hatching temperature. X-Ray's lid has two double-glass panels—thermometer can be seen every minute without raising top and chilling eggs.

X-RAY INCUBATOR

"Built Different From All Other Machines"

has only proven perfect heat regulator. Our automatic trip—an exclusive patented feature—cuts down flame at burner when egg-chamber gets too hot—a fine thing—a saving of lots of oil and money! No excess heat escapes—every bit is used to good advantage! To use the X-Ray means less egg-handling, less oil, less heat generated, absolutely no waste, no filling of lamp during hatch, no fumes, no danger of "cooking" eggs—always even heat over egg-chamber.

WRITE FOR FREE BOOK No. 41—Get Factory-Direct Price on X-Ray Incubators and Brooders

The X-Ray Brooder has same perfect heating system as the famous X-Ray Incubator. Raises every chick worth raising. Get *free* book today.

CARE AND MANAGEMENT OF AN INCUBATOR.

To the Editor of The Homestead:

Success in the care and management of an incubator depends upon the disposition of the individual—a conscientious and careful person will look after this particular work with great interest and anticipation, realizing that as much depends upon the operator as upon the machine.

Each incubator put out has its own special rules for management, and these must be followed carefully. But there are suggestions which can be used by everyone in the general care of an incubator. For instance, to be particular about an even temperature of the room where the machine stands. There should not be too great a variation of temperature during the day and night, not necessarily warm, but holding an even temperature. A cellar, dry and well ventilated is one of the best places—the air is not too dry and the temperature is more even. A kitchen is a poor place as in the daytime it will be extra warm and at night it will be cool.

Having your machine well placed the most important thing of all is your thermometer. Be sure you have one of the best. It would be a good plan to have two and they could be tested by placing in machine or in warm water. If they do not agree have them retested by a competent person. Your thermometer must be accurate to half a degree. Having satisfied yourself that your thermometer is correct place it in your machine and test the egg chamber in every part. If this is heated evenly then place the thermometer in tray in proper position and when it reaches 102½ degrees arrange your damper and see if you can hold it there a day or two before placing the eggs.

Run your machine at 102½ degrees the first week, 103 degrees the second week and from 103 to 104 degrees the last week. The first week is very important. Here a little carelessness will likely produce a poor hatch.

The turning of the eggs twice a day is very necessary for well developed and strong chicks. A good plan is to take out the two front rows of eggs and then roll the rest of them forward placing the eggs taken out at the rear of the tray. Be careful in the turning to do it gently. The airing of the eggs once a day furnishes the developing chicks in the shell with necessary oxygen—a few minutes each day for the first three or four days, then increasing the time to five, ten, fifteen, twenty minutes as your instructions state. On the eighteenth day I have found it helpful to wring a flannel cloth out of hot water and place over the eggs at night, removing it in the morning. This helps to soften the shell.

When you see the first egg pipped close the door of the machine and leave closed until the hatch is over, opening the door reduces the temperature. When the twenty-first day is up open the machine and take out baby chicks and place in lined baskets on top of machine where they should be let alone for forty-two hours. Do not feed nor handle. Any eggs that are

Mrs. Horner Buries the Hatchet.

Dear Sir: "I noticed Mrs. Selberg's remarks in your recent issue, and if it will help others you may say, I have used Walker's Walko Remedy seven years. I used to have lots of trouble with Roup until I found this remedy. I have cured cases that were frightful, but I don't have any trouble any more; I give it right along as a preventive. If my birds catch cold or are exposed, I give a little in the drinking water and it stops it right away. I use it also for bowel trouble in little chicks—it's the best thing I ever saw. It prevents bowel trouble or white diarrhoea; makes them grow stronger and feather quicker." Readers can get it by sending 50c (M. O.) to the Walker Remedy Co., U. 3 Lamoni, Iowa.—Mrs. Lou Horner, Davis City, Iowa.—Adv.

Johnson's New Book

Shows You the SURE WAY to Chicken Profits

It tells what the Johnsons have learned by 17 years experience and by millions of letters received from their 400,000 customers. It's a home-made book—plain, practical and full of helpful hints. You will enjoy reading Johnson's 1913 book. It means money to you. Send for it now. Johnson's

Old Trusty

is the incubator that made artificial hatching a success for the masses. Sold direct from maker to user, price less than $10, freight prepaid East of Rockies, and that far if you live beyond. 30 to 90 days' trial, 10 year guarantee. Read the Old Trusty Book. It is worth $10 to anyone, but sent *free*. Address a postal now.

Over 400,000 in use—all sold after 30 to 90 days trial—all guaranteed for 10 years.

Less Than $10

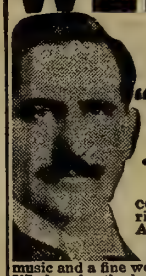
WEDDING BELLS!!



"Let Them Ring for You at Waterloo" —GALLOWAY

This is an offer to any young couple who is contemplating marriage. If you will come to the Galloway Agricultural Club in Waterloo and have the knot tied here, I will pay for the license, furnish the minister, flowers, music and a fine wedding dinner—all free! And listen—I'll also give the bride and groom a handsome present.

Let Me Entertain You

I want Farmers and their Families to visit me here at Waterloo. Come on over while you've got time for a vacation. I'll take care of you—free—at our splendid $60,000 Agricultural Club, planned and built for my Farmer Friends. Plenty to eat, music, good company—everything to make you enjoy life while here. Last week over 500 Farmers visited my big chain of factories. Many of them bought Engines, Spreaders, Cream Separators, etc., at a big saving, direct at factory prices. No obligation to buy, though. Just come and spend a day or a week, if you like, as my guest. I'll give you the time of your life.

Special 5% Discount!

If you cut out this "Ad" and bring it with you, I will give you a special 5% discount on your purchases while here. This will help pay your railroad fare. And remember, your expenses are paid while in Waterloo.

If You Can't Make the Trip Right Now, Write Me When to Expect You

PFILE'S 65 Varieties

LAND and Water Fowls. Farm-raised stock, with eggs in season. Send 2c for my valuable illustrated descriptive Poultry Book for 1913. Write Henry Pfile, Box 621 Freeport, Ill.

left in tray which are pipped and alive, break the shell carefuly all around and pull out the head by the bill, replace in tray and close machine, leaving it for twelve hours and most of them will be good chicks.

Mark on a tag and tie to machine the day and hour you set it. It is a good plan to start it in the evening. Many things might be suggested but will trust to your common sense to help you out. Fresh eggs from vigorous birds are essential to a good hatch.

It is a good plan to keep a record each year of every hatch, the number of eggs set, number of infertile eggs, number of chicks hatched, temperature of incubator each week, etc., also number of chicks raised from each hatch with remarks peculiar to the hatch. Mrs. J. W. Williamson.

Polk county, Iowa.

SHIPPING HATCHING EGGS.

To the Editor of The Homestead:

Those who are going to make a business of selling eggs for hatching purposes will do well to get busy with their advertising long before the hatching season is upon them. If advertising is neglected until the season is at hand the breeder will find that many purchasers have booked their orders previously with some other breeder who believes in keeping his name before the people. By getting your own orders booked early you can better make your plans for the season. Everything should be ready before the shipping season arrives. All materials needed in shipping can be secured before hand and may save a delay.

I prefer to ship in baskets which hold two sittings. These can be bought for a few cents. In packing eggs the bottom of the basket is covered with excelsior and the same material is packed above the eggs and between each one. Each egg is individually wrapped in nice soft paper. The cover should be securely fastened on so that no curious person can take eggs out or muss the packing. Be careful about the packing, for it helps to impress the purchaser and aids the eggs to arrive in a vital condition without losing any of their fertility. Eggs which are poorly packed and have a hard journey usually hatch poorly. Is this the way the shipper wishes his eggs to turn out? Surely it is not a very good advertisement.

The most important thing is to produce just what is advertised and to always fill orders if at all possible. If a customer is once satisfied with your stock and methods he will continue to come to you as long as you treat him right. It usually happens that when a breeder has a good stock his neighbors get their birds of him and have a flock equal to his own. I am speaking of utility fowls rather than of show poultry. If orders cannot always be filled by the breeder often his neighbors, handling his stock, can help him out. This is better than disappointing the purchaser for he is liable to be in a hurry for the eggs and will never order again from a breeder who has failed him once. In all cases where the breeder gets help in this way on his orders they should receive his own personal attention both as to selection of the eggs and to packing. All packages sent out should bear a large label bearing not only the name of the purchaser, but that of the shipper also. If complaint is received from a customer that eggs were broken in transit they should be replaced at once. Never ship an egg which you would not use for your own hatching purposes. All oversized, undersized, misshapen and thin-shelled eggs should be disposed of for some other purpose. Eggs should never be shipped in a dirty state as there is nothing which will dissatisfy the purchaser right on the start like receiving filthy eggs and don't blame them. By a little care sittings can usually be selected which are uniform in size shape and color. Those are the kind that make an impression. Remember that a new customer will often order one sitting as a trial order and if he is satisfied with the eggs when he receives them will immediately order enough for an incubator sitting. The small order should never be despised.

C. J. Griffing.

ALFALFA A SOIL MISSIONARY.

There is no clover, vetch, cowpea, soy bean or grass worth growing where alfalfa will grow well. Of all forage plants alfalfa is easily queen. It makes the greatest weight of forage during the year. The forage is richer than almost any other, and more palatable. All animals thrive exceedingly eating alfalfa, either green or dry. As the old Roman author put it, "It is good for all manner of famished cattle whatever."

Alfalfa uses the whole of the soil, rooting deeply. It requires sowing only once in several years. It enriches soils more than any other clover. It has many virtues and not one fault save that it will not grow on impoverished soils nor on sour, cold or wet soils.

These very faults are made virtues because they cause men to think and study their soils and become better farmers and better men. The truth is that any soil that will not grow alfalfa is seriously deficient, and when it has been so ameliorated that alfalfa thrives on it the soil is fit for any crop whatever, save that it may be too full of nitrogen to grow oats or other grains with soft straw.

Alfalfa is a strongly perennial clover-like legume, having a large, deeply penetrating root and a top with many branching stems. It carries a small purple, greenish or yellow bloom, and the seeds are arranged in screw-like pods. It is a plant starting very early in the spring and capable of yielding two to six or eight crops in one year, three cuttings being commonly taken in Ohio, Illinois, Nebraska and Colorado, and more in regions to the southward.

No one knows the origin of alfalfa. It came to Europe through the Persians and was highly esteemed by the ancients. It has long been cultivated in Europe under the name of "lucerne" and is today held in the highest esteem of any legume in France, Italy and some other countries with soil and climate adapted to its culture.

Though it has been grown many centuries, it is only within recent years that it has been well understood, so that today its culture is

OMAHA, NEB.

being more rapidly extended in parts of Europe than ever before. I saw its introduction pushed in Denmark and listened with pleased interest to accounts of its virtues and needs, "that the soil be well drained, that it have lime enough and inoculation."

The Spanish people brought alfalfa to the New World from Chile; it came to California, whence it spread to Utah, Colorado, Kansas and the East. Our grandfathers grew it, too, in a small way, bringing seed from France and England and some few spots such as the limestone region about Onondago county, N. Y., grew it for many years, as did a few farmers in Virginia and elsewhere.—[Joseph E. Wing, in "Meadows and Pastures."

POINTERS.

—Eggs from pure-bred White Plymouth Rocks are advertised for sale by Mrs. E. E. Johnson, Milo, Iowa.

—A. B. Summerville, Monroe, Iowa, is prepared to supply our readers with Toulouse geese eggs. See advertisement in this department.

—Choice Crystal White Orpington cockerels and pullets are advertised for sale elsewhere in this paper by J. H. Hartshorn, Traer, Iowa.

—Rose Comb Brown Leghorn eggs are offered for sale by George E. Banton, Epworth, Iowa, elsewhere in this department of The Homestead.

—Mrs. J. E. Baxter, Walnut Grove, [illegible]moth White Holland turkeys, Minn., has Many. Her advertisement appears elsewhere in this department.

—B. M. Hall, Ellsworth, Iowa, quotes prices on Single Comb Buff Orpington eggs and Pekin duck eggs in his advertisement elsewhere in this department.

—S. F. Battels, Indianola, Iowa, quotes prices on Single Comb Rhode Island Red eggs in his advertisement appearing elsewhere in this paper.

—Mrs. J. N. Cooper, Route 2, Red Oak, Iowa, is offering Cornish Indian cockerels and hens for sale in her advertisement appearing elsewhere in this department.

—Edward Meyer, Dyersville, Ia., breeder of high-class Partridge Wyandottes, has taken some more prizes at Bellevue in strong competition. He won first on cock, first and second on hen, first and second on pullet and first on hen. He writes that he has a fine flock of Partridge Wyandottes and still has some fine cockerels and pullets for sale.

—If wanting to purchase Single Comb White Leghorn cockerels read the advertisement of the Power Creek Farm, Treynor, Iowa, appearing elsewhere in this department.

—A few Barred Plymouth Rock cockerels are offered for sale at a very moderate price by Mrs. S. W. Miller, Truro, Iowa, in her advertisement appearing elsewhere in this department.

—Fertility tested Single Comb Minorca eggs from an ideal laying strain are offered for sale by C. G. Dake, Epworth, Iowa, in his advertisement appearing elsewhere in this department.

—We wish to direct the attention of our readers to the advertisement that appears elsewhere in this paper of B. W. Eckels, Nevada, Iowa, offering White Plymouth Rock eggs for sale.

—Extra heavy-boned Barred Plymouth Rock cockerels are advertised for sale by M. A. Easthouse, Hartley, Iowa, elsewhere in this department. Mr. Easthouse is also quoting prices on eggs.

—Mrs. S. S. Hunzeker, Steinauer, Neb., wishes Homestead readers, as per advertisement elsewhere in this issue, to send their orders to her for Black Langshan and Single Comb Brown Leghorn eggs.

The advertisement of Mrs. F. B. Dann, DeWitt, Iowa, offering Rose Comb Rhode Island Red cockerels and Mammoth Bronze turkey hens and toms for sale, will be found elsewhere in this department.

—Steve Morlan, Plano, Iowa, is offering Mammoth Bronze turkey toms, pullets and eggs and Buff and White Orpington cockerels and eggs for sale in his advertisement found elsewhere in this department.

—Choice eggs from Rose Comb Silver Laced Wyandottes from a good laying strain are advertised for sale by Mrs. Frank Hoffman, Birmingham, Iowa. Her advertisement will be found elsewhere in this department.

—Prices on Barred Plymouth Rock eggs from large, well-barred birds and of a good laying strain are named in the advertisement of Mrs. J. H. Heilman, Holstein, Iowa, that appears elsewhere in this paper.

—We desire to call the attention of Homestead readers to the advertisement of H. P. Myers, Murray, Iowa, that appears elsewhere in this department. He has eggs from high-scoring Black Langshans and Buff Plymouth Rock chickens for sale.

—In changing advertisement appearing elsewhere in this department from stock to Single Comb White Orpington and Barred Rock eggs for sale, Mrs. J. A. Campbell, Manning, Iowa, mentions the fact that The Homestead made her good sales of stock.

—The Barred Rock cockerels advertised for sale by the Hawkeye Poultry Yards, Mount Pleasant, Iowa, elsewhere in this paper, will weigh from eight to nine pounds and were sired by a twelve-pound cock. They are strong, lusty, big boned and nicely marked.

—E. S. Dyas, Bellevue, Iowa, in furnishing copy for advertisement found elsewhere in this department, writes: "Let me know in writing how many and what sort of birds you are needing. I can give some bargains in Wyandotte cockerels and guarantee satisfaction."

—John W. Houselog, Bellevue, Iowa, is making a big reduction in prices on his cockerels, considering the quality he is offering. He needs the room to mate his breeding birds for the egg season, so has decided to give Homestead readers this large reduction while they last. Order at once. See his advertisement on this page.

—R. B. Rowe, Indianola, Iowa, in furnishing copy for advertisement offering Buff Wyandotte eggs for sale, found elsewhere in this department, writes that he has three fine pens and one range flock from which he can furnish eggs. His pens and flock are headed by cocks and cockerels scoring an average of better than 92 per cent, and the hens and pullets are just as good.

—The 20th Century Hatchery, Chatfield, Ohio, is again advertising day-old chicks of four varieties, good pure-bred stock, for sale elsewhere in this department. They have been in the business for the last fourteen years and have shipped chicks all over the United States. They will have a 40,000-egg capacity for this season. Their catalog is free. Write them if in the market for chicks.

—In furnishing copy for advertisement found elsewhere in this department, Mrs. L. A. Catlin, Roseville, Ill., writes: "I won eleven ribbons and two silver cups on my Black Langshans at the poultry show at Monmouth, Ill., January, 1913. I also won three firsts and silver cup for the ten best birds in the Asiatic class and silver cup for the best cock, cockerel, hen and pullet at the Warren County Show."

—In furnishing copy for her new advertisement found elsewhere in this department, Mrs. W. F. Prather, Atlantic, Iowa, writes: "I exhibited my birds at some of the poultry shows this season. I won first on pen, first and second on cockerel, first on pullet and second and third on hen. My free range flock is headed by high-scoring male birds, some of them prize winners. My hens are excellent layers as well as show winners."

—Under the proper headings in this department Rahn & Son, Clarinda, Ia., are advertising White Runner duck breeding stock, Buff Orpington duck eggs, Partridge Rock and White Wyandotte chicken eggs. In furnishing copy for their advertisement they write: "On White Wyandottes we won first on cockerel; second, third and fifth on pullet at Des Moines; second and fifth on pullet at Sioux City State Show; first on cock; first on cockerel; first, second and third on hen; first and fourth on pullet, and first on pen at Clarinda, Iowa. We also won silver cup for highest scoring ten on solid colored birds and cup for highest scoring ten in show. Our Parti Rocks were heavy winners at Villisca and Clarinda, Iowa. We have the best White Runner and Buff Orpington ducks we ever raised and we are ready to ship eggs now, as our pens are all mated."

—Ivory White Poultry Farm, Greene, Iowa, has for sale twenty cockerels of each of the following breeds: White Plymouth Rock, Single Comb Orpingtons and Rose Comb Leghorns. Some of the best poultry fanciers in the vicinity of Greene are connected with the Ivory White Poultry Farm and they have had winners at the leading poultry shows in Iowa during the past few weeks. They can please you in prices and quality. See their advertisement elsewhere.

The above is an illustration of pullet No. 27, owned by Frank Faha, Jr. This pullet has a laying record of 232 eggs in one year. Mr. Faha's pens this year will consist of nothing but the best that time and money will produce. In furnishing copy for his advertisement Mr. Faha writes us he has fifty pens of well-mated breeders to sell at $10 per pen. We advise our readers who are interested in Silver Laced Wyandottes to take advantage of this offer.

INCREASE YOUR CROP
8 to 15 Bushels to Acre

The Brillion Clod Crusher will increase your yield from 8 to 15 bushels per acre. It crushes, pulverizes, rolls, levels and packs the soil. Makes a perfect seed bed which retains all the moisture a few inches below the surface. Free booklet tells all. Write today.

If your dealer don't sell *Pounder Harrows*, we ship one direct, lowest price, freight pd. Write for catalog.

G. H. POUNDER, Del. 5 Ft. Atkinson, Wis.

Cutting and Curing Pork.

PORK is unlike beef and mutton in that it should be cut just as soon as it is cooled through. If the carcass (Fig. 1) has not been split to aid quick cooling it should be laid on the block and the head removed an inch back of the ears.

Next remove the shoulder between the fourth and fifth rib and cut off the

FIG. 1.
Carcass of pork—head, shoulders, middle.

hams about two inches in front of the pelvic bone. Split the hams and trim to a smooth rounded piece (Fig. 2.) The feet may be removed at the hock joints, but sawing them off a couple of inches above the hock is recommended, as the hams will then pack much closer in the barrel. Split the

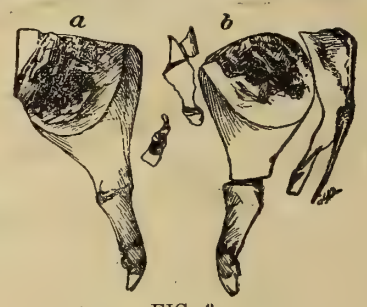

FIG. 2.
Trimmed and untrimmed.

middle piece with a saw or ax and remove the leaf if this was not done when the hog was dressed. This may be easily accomplished by starting the leaf at the front end and peeling it backward with the fingers. The kidneys come out with the fat. Take the loin (Fig. 3a) and spareribs, leaving the lean meat found along the back of the loin, which may be used fresh as chops or for roasting. When cutting the meat from the ribs, the separation should be made as close to the ribs as possible. This much improves the quality of the bacon. Cut the side lengthwise into three evenly sized strips, or if to be cured and smoked, into two pieces, the upper one-third (called the back strip) for salt pork or lard, and the lower two-thirds (called the bacon strip) for bacon. The edges should always be trimmed

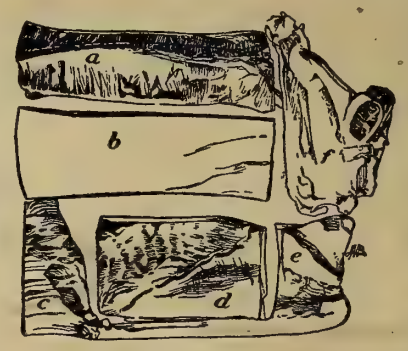

FIG. 3.
Side cuts of pork; a, loin; b, fatback; c, spareribs; d, bacon strip; e, trimmings; f, leaf.

up square, and all scraggy parts used for sausage or lard. Take the ribs and neck bones out of the shoulder and trim it down to the top of the shoulder blade. Trim off all bloody spots and neck meat. Remove the foot above the knee joint. Split the head through the center and then into quarters. On heavy hogs the jowls are often removed for salting before the head is split. The hams, shoulders, and bacon strip may be cured and smoked, the loin cut into

Galloway

Invites You to Enjoy Yourself at His Expense

Right now's the time, boys, to take that little trip to Waterloo. You've got the time, and it will pay you big to see with your own eyes the wonderful money-saving bargains to be snapped up right in the big Galloway factories. Bill says

"Come to Waterloo"

Be my guest at my expense. Whether you stay a day or a week, I'll entertain you at our $60,000 Agricultural Club, planned and built for the comfort and pleasure of my Farmer friends. Over 500 here last week had a ripping good time. Some bought; some didn't. It doesn't matter. You're under no obligations whatever to buy.

See My Big Factories!

A great sight! Worth traveling many miles to see. I will show you through an enormous chain of factories—largest in the world selling direct to farmers—hundreds of men turning out a flood of Engines, Spreaders and Cream Separators where only a few years ago was a cornfield on the edge of Waterloo. Don't miss this!

I Will Expect You Sure!

Now, don't disappoint me. I'll look for you and will made your visit a big surprise. You'll go back and tell your friends: "I never had such a fine vacation." If you can't come just now, write me why.

An Appeal to the Farmers of America

The farmers who grow sugar beets and the manufacturers who make beet sugar publish the following facts about this industry in order to enlist the public's support in favor of retaining the present tariff on sugar. Read every word of this message! It is important to you—and your children—and to the millions of Americans who are interested in agriculture and its dependent industries. This is a fight between the *trusts* and the people. *We are with the people*—and we want the people to be with us—we want *your* co-operation and support. Read the rest of this message *now*—then *act promptly.*

The ***Sugar Trust,*** in combination with a few other big importers, seeks to have the tariff on sugar *removed*—with a view to crushing the beet sugar industry of America—their only competition. The sugar importers send millions of American money abroad every year for sugar—the beet sugar industry keeps the money at home, benefiting thousands of American farmers, coal miners, machinists and workingmen in many different lines. Removing the tariff will only *benefit the Trust and the big importers*—it *will not permanently* lower the price of sugar—no more than did the removal of the tariff on coffee reduce the price of coffee. It will cut the government's revenue enormously and crush a great and rapidly growing American industry that gives employment and support to thousands of American farmers, workingmen and business men.

Here are the facts tersely told in eight short paragraphs. Read them carefully and thoughtfully, then fill out and mail the coupon below—today—*now.*

1. **All Agitation for a Lower Tariff on Sugar Originated with the Importers of Foreign Sugar.** There are only three large importing interests in the United States, of which **the Sugar Trust dominates.** They handle three hundred million dollars' worth of sugar annually and fear that the further development of the home beet sugar industry will destroy their **monopoly.**

2. **These Importers Wish to Prevent Further Development of the Home Beet Sugar Industry** because home produced **beet sugar is their only competition** and the only sugar which does not pass through their hands and from which they cannot **exact toll from the American consumer.**

3. **The present tariff on sugar is a large revenue producer for the government and therefore decreases direct taxes.** Its net effect on the consumer amounts to only **14 cents a year per capita.** To reduce this tariff means perpetuating the **monopoly of the importing sugar refiners.** To retain the present tariff means the further development of the home beet sugar industry, and, ultimately, cheaper sugar.

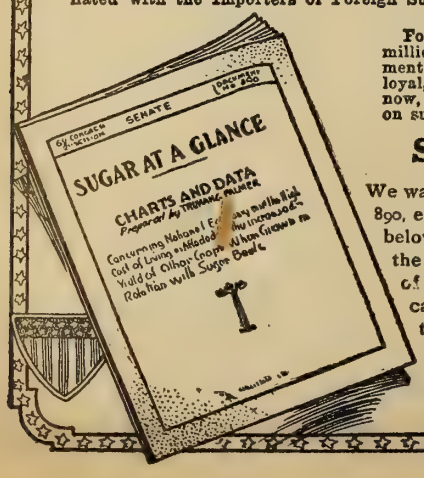
4. **The Tariff Is no Burden to the Consumer,** because the price of sugar is lower in the United States than in most other countries, and because 40 per cent of the sugar consumed is used in the manufacture of candy, confections, chewing gum, condensed milk, etc., the retail price of which would not be affected by any decline in the price of sugar. Reducing the tariff would reduce the government revenue without any gain to the consumer.

5. **Beet Sugar Production Can Be Developed to Supply the Entire Demand of This Country.** It increased 1500 per cent since the present tariff was enacted in 1897. There are now seventy-two beet sugar factories in the United States, located in sixteen states, extending from Ohio to California, and owned by thirty-nine independent concerns. These factories represent an investment of eighty million dollars and produce over twelve hundred million pounds of sugar, or about one-sixth of the total consumption in the United States. The production of beet sugar benefits the farmers, the workingmen, the coal miners, the machine shops and the railroads.

6. **The Price of Sugar Has Steadily Decreased Since the Advent of Beet Sugar.** Further development will reduce the cost of manufacture and further reduce the price of sugar to the consumer, and will retain in this country immense sums of money that are now sent abroad for the purchase of foreign sugar.

7. **Beet Sugar Is the Same Substance as Cane Sugar.** It has the same amount of sweetness as cane sugar and can be used for all purposes. Dr. Wiley, while chief of the United States Bureau of Chemistry, declared that there is no distinguishable difference of any kind between refined beet sugar and refined cane sugar.

8. **Beet Sugar Industry Needs Tariff Protection.** Because it is only partly developed and because farm and factory wages in all other sugar producing countries are less than one-half of the wages for the same work in this country.



For your own present and future welfare—for the welfare of the millions of hard-working farmers—for the upbuilding and encouragement of American agriculture and American industries, you, as a loyal, home-loving citizen of the United States, should, right here and now, enter your most vigorous protest against a reduction of tariff on sugar.

Send Now For This Free Book

We want to send you, FREE, a copy of U. S. Senate Document No. 890, entitled "Sugar at a Glance." Just fill out and mail the coupon below and the book will be sent you free. This book gives you all the facts about sugar and tells how you can increase the fertility of your land by growing sugar beets. You can then judge the case clearly and help to build up the beet sugar industry of the United States by following the plan outlined to you. Fill out and mail the coupon NOW before it gets lost.

It can't be beat—

The best evidence as to whether or not the Mimbres Valley is the best place for you is whether it has proven to be the best for others! Talk with every farmer in this section and all of them would say: "Deming and the

Mimbres Valley
of New Mexico

cannot be beat!" They have mighty good reason to say this. With a smaller investment, they are making twice as much per acre as you are; they are sure of their crops because they control their water supply, getting water just when needed and just as much as needed. Their soil is rich, silt, easily worked, and level—unleached by rains. Their climate provides nine full months growing weather, making two and three crops a year practicable. They are living in a climate so famous for health that hundreds come here each year just to get well. They are getting tip top prices for their products from the mining and railroad centers all around; and best of all, these prices will stay high for the reason that land suitable for farming is strictly limited while the development of mining industries here is unlimited!

That is what makes the opportunity here so great now. Land prices, considering earning power, are ridiculously low simply because it was only a few years ago that the agricultural possibilities of this section were known; but with this farming area so limited in extent and with hundreds of people coming in every year, you can figure how quickly land prices are going up. A man must act at once! Right now a personally owned water right here (pumping irrigation plant) costs less than half what a Government or corporation controlled water right costs elsewhere!

You don't have to start with a strange crop here. You can raise the crops you've been used to—only get bigger yields and higher prices for them!

Deming, New Mexico

is the metropolis of this rich valley; a splendid city of 3,000, with fine buildings, grammar and high schools, electric light, water and sewer system, paved streets, etc.—as fine a town as you'd want to see; and a good local market.

Get our free book!

—telling you in plain farm talk all about the Mimbres Valley; why folks are gaining wealth and health there; with scores of actual photo farm scenes, some in *full color;* and actual statements from men who have lived in all parts of America but say that "this valley *can't be beat.*"

Se'cy, 101 Chamber of Commerce, Deming, N. M.

Send Your Name Today, and we will mail you this big free illustrated book which will tell you how to qualify in a few weeks' time for a good job or business.

Automobile Training School, 1200 Locust St., Kansas City, Mo.

chops or roasts, as in mutton, and used fresh. All lean trimmings are made into sausages and fat trimmings into lard. The feet, snout, and ears are pickled and the head boiled for head-cheese.

If it is not intended to use the side pork as bacon, it is advisable to cut it into smaller pieces, as it packs closer in the barrel.

When the meat is cooled, rub each piece with salt and allow it to drain overnight. Then pack it in a barrel with the hams and shoulders in the bottom, using the strips of bacon to fill in between or to put on top. Weigh out for each 100 pounds of meat eight pounds of salt, two pounds of brown sugar, and two ounces of saltpeter. Dissolve all in four gallons of water, and cover the meat with the brine. For summer use it will be safest to boil the brine before using. In that case it should be thoroughly cooled before it is used. For winter curing it is necessary to boil the brine. Bacon strips should remain in this brine four to six weeks; hams six to eight weeks. This is a standard recipe and has given the best of satisfaction. Hams and bacon cured in the spring will keep right through the summer after they are smoked. The meat will be sweet and palatable if it is properly smoked, and the flavor will be good.

In order to dry cure pork, for each 100 pounds of meat weigh out five pounds of salt, two pounds of granulated sugar, and two ounces of saltpeter, and mix them thoroughly. Rub the meat once every three days with a third of the mixture. While the meat is curing it is best to have it packed in a barrel or tight box. For the sake of convenience it is advisable to have two barrels, and to transfer the meat from one to the other each time it is rubbed. After the last rubbing the meat should lie in the barrel for a week or ten days, when it will be cured and ready to smoke. To cure nicely it is desirable to have a cool and rather moist place in which to keep it.

This recipe should not be used where the meat must be kept in a warm and dry place, as the preservatives will not penetrate easily and uniformly.—[Andrew Boss in Farmers' Bulletin.

MILLIONS FOR ROADS.

Kansas will have $5,250,000 available for highway improvements and new bridges this year, and one of the big tasks of the legislature is to appropriate this money to do the most good. Last year the state spent $4,975,000 for good roads and bridges. There is no way to tell now how much of this was wasted. Under the Hodges Road Law, enacted two years ago, there was some system in the road work. The legislature is planning to extend the system and make every dollar in the road fund do at least ninety cents worth of work, instead of about sixty cents or less, as was the case before the Hodges law went into effect.

"The only way to build roads is for the county to start with a general road plan with the county seat and market towns as the centers, and build roads to radiate from them," Senator Paul Klein, chairman of the committee on roads says:

"The old idea of building a good road for a few miles in one township and then skipping two or three miles and build some more good road is a waste of money. Half the good roads are not connected with each other. If Kansas had started out twenty years ago spending its money on a systematic plan for roads, instead of a hit-or-miss proposition, the state would now have the finest system of improved roads in the country.

TO CALIFORNIA.

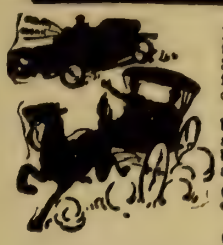
Send the Coupon Below for Prof. Jesse Beery's Grand Free HORSE-TRAINER'S PROSPECTUS!



This book, by Prof. Jesse Beery, "King of Horse Trainers and Horse Tamers," tells the thrilling story of his eventful career; points the way to success as a practical Horse Trainer; explains the Beery System; gives many examples of men who are now repeating the very feats with which the great horseman won the applause of vast audiences throughout the United States.

Every owner of an unmanageable horse or colt should send for this book. Everyone who loves horses should learn the secret of subduing and controlling the wildest horses without the use of whips, cruel "curb bits" and other instruments of torture. Every man who is looking for a profession that pays

$1,200 to $3,000 a Year at Home or Traveling

should learn how hundreds are making big money as professional Horse Trainers with the aid of the simple, safe, humane Beery System. Take for example the case of Emmett White, of Kalona, Iowa, who has followed the Beery System and become a professional Horse Trainer. Mr. White says: "I would not take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy a home and an automobile solely through earnings from training horses as taught by your excellent methods. I am proud of my profession."

Do You Own a Balky, Tricky, Scary, Vicious Horse?

If so, don't get rid of the horse—get rid of its bad habits! The minute such horses are thoroughly mastered and trained their value is doubled or trebled. Prof. Beery teaches you to master any horse and make him valuable, useful, salable.

Priceless Facts from World's Master Horseman

Having retired from the arena, Prof. Beery is devoting his life to teaching others how to duplicate his marvelous achievements.

He writes from experience, in a simple, direct style, without boasting, yet you realize that he is a veritable wizard—one who knows more about the nature of horses than any other living man.

Thousands Are Now Making Money by the "Beery System"

Today he can point you to thousands of men—yes, and a number of women!—who are making all kinds of money by training horses, breaking colts, giving exhibitions, buying up cast-off "tricksters" and "man-killers," taming and training them and re-selling at high prices. Prof. Beery's lessons are simple, thorough and practical.

A. L. Dickenson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several different men. I got them and gave them a few lessons and have been offered $400 for the pair. I bought them for $110."

F. N. Goux, Vernon, N. Y., writes: "I cannot speak in high enough praise of your instructions. I am at present handling a $1,000 horse. People bring me horses to train from miles around."

Roy Fordyce, 041 Adams Street, Spokane, Wash., says: "I am delighted with your teachings. Have trained a 3-year-old stallion to drive without a bridle or lines. I would recommend your system unqualifiedly to anyone."

Best dealers everywhere. Address all inquiries to The Sherwin-Williams Co., Canal Rd., Cleveland, O.

Everybody Can Afford To Pay for The Clean Flour

MOST people think all flour is clean because it looks clean. When wheat comes to the mill the crease in the wheat kernel is full of dirt. Unless every kernel is washed, and scoured, and the flour thoroughly purified by the most modern machinery, the dirt is ground up with the wheat, remains in the flour, and goes into the bread. You then pay for the dirt in the flour, so much per pound, and of course the dirt has no food value. Bread made from cheap flour which is not clean contains less nourishment,—it gets stale quicker and costs the family more in the end than bread made from higher priced flour.

The Guaranteed Flour
OCCIDENT

is made from such high quality wheat and goes through so many washing, scouring and purifying processes that we are able to put a Money-Back Guarantee in every sack. We guarantee OCCIDENT Flour to make whiter, lighter, better tasting bread, biscuit, cake and pastry than any other flour, and more of it per sack. If it fails to please you for all baking, your money will be refunded without argument.

Costs More —Worth It OCCIDENT bread, because of its extra cleanliness, stays fresh and sweet longer than other bread. You can bake a double batch. This saves the work and fuel expense of many baking days. Every housewife should test the extra great advantages of OCCIDENT Flour.

WITH THE EDITOR.

The incidents which follow are actual facts, observed or reported by persons whose veracity is undoubted. That the ways of parents with their children are sometimes praiseworthy, sometimes blameworthy, is easy to see.

As he came through the open door tugging a big basket of chips and cobs Bobby proudly said, "I filled the basket as full as I could." Glancing up from her work of cutting cookies Bobbie's mother repressed an exclamation of displeasure. The child was making a track of litter from the door to woodbox. What she said was: "I see you did, son. Next time I wouldn't fill it quite so full if I were you. Better get the brush and dust pan before you wash your hands—and then come and have some cookies. I sugared the tops of some on purpose for you."

"Come here, you dirty little thing! Come here, I say!" As she spoke the angry mother swooped down upon the shrinking child, slapped her sharply on the face and shoulders, then shook her violently and jerked her upon a chair, saying as she did so, "Not an hour since I put that clean dress on you, and now look at it! If you move off that chair I'll whip you till you'll be too sore to move again for awhile!"

"Mary'll be sick if she eats any more of those cucumbers, Tom. She must not have have another slice. They always disagree with her." As her mother spoke Mary began to whimper and her father drew the cucumber dish toward him. As he helped the child liberally, the father said, "It's a strange thing that we can never have a meal in peace in this house. If the child wants cucumbers let her have them. I'm tired of this everlasting fuss about what the children eat. Other children eat what they want. I don't see why ours can't."

"Well, son, what is it to be? Ice cream? I thought so. Well, you earned it, all right. How many cups of potato bugs was it you picked? Nine? You and mother were even then. I guess we'd better bring home candy for her. We must play fair you know. It would never do for us to treat ourselves and forget mother."

"Don't tell me you can't. I say you can—and you will—or I'll know the reason why. I'll have no loafing around here. When I was fifteen years old I did a man's work—never thought of being sick. Hitch up and get off to the field, I say." The boy, palefaced and sullen, turned and walked toward the stable. As he went he muttered below his breath and the look in his eyes was not pleasant to see.

"Your father would be furious if he knew. Last time I left the door unlocked for you I said it would be the last time. I was perfectly sick till your father fell asleep; even then I was terrified lest you should stumble in the dark as you crept up the stairs and waken him. I'm not sure but he is right about your going with Jim Maddox, too. Men know about other men better than we women. I'm sorry I helped you deceive your father. If anything were to happen to you he'd kill me. You're able to take care of yourself—of course, you think so—girls always do—but they often come to grief, just the same. I tell you what, Anna Marie, this is the very last time. I'll help you slip out tonight, but never again, never again."

"What are we to do about Frank, mother? He seems perfectly determined to have a horse of his very own, as he puts it." "You talked with him again today, father?" "Yes, and he is more set then ever—if that could be." The mother waited a moment and then said, "What do you think yourself? Have you come to any conclusion?" "Well, not exactly. I think he's over young to have a horse of his own; on the other hand, he is unusually steady for a lad of his age, and he has worked out a plan by which he thinks he can earn the horse if I'll let him. I think perhaps if you're willing we'd better let him have his way since he is so set on it. As long as he does not stay out too late and tells us where he goes he'll not come to harm with the training he has had."

People's Popular Monthly
Des Moines, Iowa

tions. After that witch-hazel, vinegar and hot water, or alcohol and water, put on with a bandage and often moistened.

For sore throat take one-half a pint of strong sage tea steeped with one teaspoonful of cayenne pepper. Strain and add to it two tablespoonfuls of strained honey, two of vinegar and one of salt. Gargle every hour until throat is better.

Hot soda baths are recommended by some persons for rheumatism, and the way they are taken is this: Fill the tub half full of water as hot as can be borne, add half a pound of common baking soda and immerse the body for at least twenty minutes, keeping up the temperature by the addition of hot water from time to time. Vaseline or cold cream should be rubbed into the skin after the latter has been dried, in order to replace the natural oils.

Poultices.—A poultice is one of the best means for applying heat and moisture in order to relax tissues and ease pain. If they are used to remove pain in the internal organs, make large enough to cover adjacent territory, and as hot as can be borne. If for an external wound make only large enough to cover the spot. Never leave on long enough to grow cold and hard or they do more harm than good. Have a hot one ready to apply before removing the one that is on. There are many kinds of poultices, but the old-fashioned flaxseed is most generally used. It is most efficacious for breaking up a severe cold on the chest and in relieving the congestion in pneumonia. To make it have water boiling and stir in ground flaxseed meal until thick enough to cut with a knife. Add a spoonful of olive oil and spread on a piece of muslin twice as large as needed to turn over and leave an inch or two of margin. Apply to the seat of the trouble as quickly as possible and as hot as can be borne. Do not make too heavy, as the benefit of the poultice lies in the moist heat, not the weight.

LITTLE HELPS BY THE WAY.

German proverb: Misfortune is often the daughter of a good mother.

"The rainbow shines in all its perfect brightness,
After the thunder cloud and flood of rain;
And God sends light and joy, and peace and gladness
Ofttimes when we are bowed with care and pain."

If you cannot in the harvest
Garner up the richest sheaves,
Many a grain, both ripe and golden,
Oft the careless reaper leaves.
Go and glean among the briars
Growing rank against the wall,
For it may be that their shadow
Hides the heaviest wheat of all!
—Ellen Gates.

TO CURE PORK.

One of our neighbors has a plan for curing pork that enables him to begin smoking it the next day after butchering. The meat is cut up in the usual way ready for salting. The required amount of salt is put in a pan or kettle and heated until it is quite dry and granular—like granulated sugar. It is stirred constantly while heating and applied hot by rolling and stirring the meat in the hot salt. Put on a pair of clean cotton gloves and rub the hot salt in thoroughly. It adheres readily to the meat and after cooling for twelve hours is ready to be smoked. This plan has been used for several years and with uniform success.

APPLE WAYS.

Baked Apples With Honey.—Large apples are chosen and cored, the cavity is filled with honey, and they are baked thus, a little butter being added on top of each.

Apple Dumplings.—Pare and core tart cooking apples, envelop each in a layer of biscuit dough, rolled as thinly as possible. Place the dumplings in a baking pan, plentifully sprinkle them with cinnamon and bits of butter, then half cover with water and sugar to make sirup. Bake slowly and baste well.

Apple Fritters.—Pare and core four apples and slice them crosswise in round slices. Beat one egg light, add one cupful of milk, one cupful of flour, into which has been sifted one teaspoonful of baking powder and a pinch of salt. Beat hard for three minutes. Put the sliced apples into this batter. Have ready a kettle with hot lard. Drop the batter into it in large spoonfuls, having one slice of apple in each fritter. Fry for ten minutes. Serve on a hot vegetable dish.

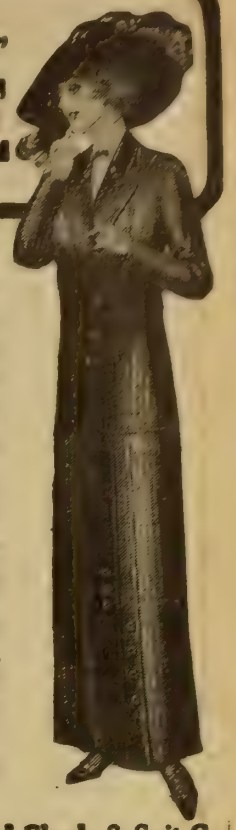
Apple Roll.—Pare, core and cut into even pieces enough apples to fill a quart. Make a short biscuit dough by rubbing two small tablespoonfuls of lard or butter into three small cupfuls of flour with which previously has been sifted one and one-half teaspoonfuls of baking powder and a large pinch of salt. Rub fine and mix to an extremely soft dough with cold milk or water, turn out on a molding board and lightly press out in a shape longer than wide, put the apples on this and begin at one end and roll up. Put loosely in a pudding cloth which has been wrung out in exceedingly hot water and sifted with flour, and steam one and one-half hours, or a little longer. A slight sifting of nutmeg or cinnamon may be put with the apples before rolling, but no sweetening.

Hard Sauce.—Slightly soften a half cupful of butter by adding a tablespoonful of hot water. Stir until creamy and then stir in one and one-half cupfuls of light brown sugar. Stir until light. Flavor with cinnamon and vanilla essence.

AMONG OURSELVES.

The request of the editor that our friends tell us what "The Coming of the Snow" meant to them has been complied with, and two of these letters are presented for your pleasure.

The Beautiful "NATIONAL" Money-Saving Style Book FREE



The "NATIONAL" Money-Saving Style Book—a Book of Beauty, of New Fashions and a Book of Bargains. One copy is *yours* free—write for it today. It will help you to dress better and still save money. It's filled from cover to cover with bargains:

G. M. DITTO, Box 13 JOLIET, ILLINOIS

These letters are as different as to characteristics of the writers and exhibit widely different stirrings of the spirit. "Vera" is in a reminiscent mood as she recalls how she felt the throb at the heart of nature. She says:

How many memories are awakened by this one sentence. Events long since forgotten are again brought before my mind's eye. Especially clearly do I remember one bleak November day a couple of years ago. I had spent a very trying day in the schoolroom and was mentally and physically tired. I started on my homeward way feeling as if my efforts were all in vain and the world were upside down. The sky was heavy with unfallen snow and presently the snow began falling in large, white flakes, slowly but surely changing the dreary landscape to a downy white. When I came to the large bridge I stopped, leaned up against the railing and watched "the noiseless work of the sky." A sense of peace seemed to pervade me and gradually all my troubles seemed to diminish and be of less consequence than before. As I was standing there, breathing the pure, bracing air and trying to forget my disappointments, a belated bird flew above me on its way to the South. Instantly the following stanza of Bryant's "To a Water Fowl" flashed across my mind:

"He who from zone to zone
Guides through the boundless sky thy certain flight
In the long way that I must tread alone
Will guide my steps aright."

I started again on my homeward way feeling comforted and satisfied. My courage was restored and everything seemed more satisfactory than before. I felt that I was truly blest to be able to commune with Nature and thereby restore my confidence in providence and myself.

Have not many of you at some time or other, perhaps time and again, found the benefit of losing yourself in the calm of nature and then returning renewed through and through to the awaiting work of your life? Red letter times were they not?

"Thought-provoking" is perhaps a new term to some of us. The term might perhaps be better if it were "thought-evoking." Getting other people to think and to express themselves in a helpful way is what is intended by the expression. Frances Mason Ferguson shares with us the thoughts that "A Soul Unmarked" brought to her. Her snow thoughts are:

As we gaze in the dawning of a frosty winter's morning upon the newly fallen pure, untrodden snow we think how beautiful and peaceful the scene. And if for some reason, such as an unusual depth of snow or the severity of the weather, that

"The white gleaming surface
With its fullness of soft, snowy white,"

of which we have read in the poem, "A Soul Unmarked," remains undisturbed by people remaining indoors, then as I look forth upon this great waste of unbroken white surface a feeling of sadness and isolation steals over me and I wonder if all this seeming purity has made the lot of the poor still harder to bear. I look out longing to see the activities of life begin anew, to see this cold, glistening surface turned into a busy mart broken by the tread of feet of both man and beast, to see its white fields and roads scarred and seamed by the toil and travel of the toilers as they go here and there, each to his allotted task; some to relieve suffering and bring cheer and companionship which is more desirable than riches to those who are shut in away from the pleasures of the world, who may be made to rejoice by our coming, though we may leave behind us, on the hitherto undefiled snow, a trail darkened by the grime of travel, accompanied by strife and turmoil if we are to give loving service to our fellow men. We cannot be of much service to humanity if we are to sit idly by "untarnished, undarkened," for fear of soiling our white hands from contact with our brothers and sisters, a soil which is only external and does not defile because it readily washes off. To give to the world our best we must not be afraid to mark out, though rough hewn and crooked, a well-defined trail, though it leads over rocks and shoals and be strewn with wasted endeavor and seeming defeat. Though we may diverge from the points of the compass, all these failures help to build for character and impart strength to aid us in helping the unfortunate over the rough places. Our failures may be a beacon light to those who follow after us by revealing to them the pitfalls into which we have fallen as we passed by. Our most sincere friends came to us not over the white, smooth roads of prosperity, but over the rock-ribbed roads of adversity. God judges us by our motives and not by the tortuous road we chose to follow to carry out our good intentions. And when we come to take our final examinations He will give us a high per cent in our marking just for our striving to use the small talent which He has given us. Perhaps we would not stumble so often if we would ask God to choose our way.

Choose Thou my way from day to day,
For my feet grow weary in the way
Which in my weakness I have sought
And found the way with danger fraught;
Choose Thou my way.

Did you ever think of comparing Eve in the garden and Mary in the other garden—Eden versus Gethsemane? Which has done more for the race, for womanhood?

A little chat and some advice about what books to read we are to have from Mrs. Ninette Lowater, a friend of the department with a welcome of long standing:

I am glad that no one thought "The House of Mirth" a suitable gift for a young girl. I think it a morbid, unpleasant story, dealing with problems beyond a young girl's knowledge. As an exposure of the evils of the present system of society it is good and I wish every parent of girls might read it. There are several late books which are good reading for any girl, any one of which might be used for a gift to anyone. There is "The Shuttle," by Mrs. Burnett, whose principal character, Bettina, is perhaps the finest example of self-control and self-reliance in modern fiction. "The Shepherd of the Hills," "The Calling of Dan Matthews," "That Printer of Udell's" and "Barbara Worth," by Harold Bell Wright, are all good, but perhaps "The Calling of Dan Matthews" is less suitable for a young person than for an older one. "The Heritage of the Desert," by Jane Gray, is a fine book. So is "Precious Water," which, like "Barbara Worth," is based on the reclamation of desert land. Two late especially fine books are "Freckles" and "A Girl of the Limberlost," by Gene Stratton Porter. These are good for reading by anyone. "The Road to Providence" is both good and unusual. "The Stories of Friendship Village," by Zona Gale, are among the best of the late books. An older book, but not as well known as some of her others, is "Gayworthy," by Mrs. Whitney. No one need hesitate to use any of her books. I do not think the Patty books and their kind good reading for the young. A girl who shirks her lessons and is a ringleader in mischief and evasion of rules, through school and college, is not safe to introduce to a young person, even in a book. And the more interesting the book, the worse the influence.

Sophia C. Leland writes strongly on the same topic. She points out the great danger that lurks in unwise selection of books. There is just so much time for reading, and every character in which a young mind becomes interested helps to form a basis which is used as a measuring rod. This measures quality rather than quantity. Falseness in the measure becomes falseness in the measurer far too often. Early reading by a young woman or man may well be carefully chosen with the idea of supplying a genuine touchstone wherewith later in life to test men and affairs. Let us hear her:

I feel that I must put in a word after reading what "Elizabeth" says about "The House of Mirth" and kindred books. Is it necessary for a girl of sixteen or of an older age to soil and besmirch her skirts just to see how coal will blacken? Would we send her through the slums and red-light districts to prove to her they exist? God forbid. She says these books will teach her of "life as it is and describe man as he too often is." Men may be such in the society Edith Wharton writes about, but how does a favorite author know of these things? A book for a young girl or any girl should be elevating and uplifting, and although such conditions may and do exist as are described in "The House of Mirth," why should they be dished up to nauseate and poison the taste for the good, the true and the beautiful? Sometime ago a literary club concluded to discuss some of the books in the library of their city. They chose "The House of Mirth," by Edith Wharton; "The Shuttle," by Frances Hodgson Burnett, and "The One Woman," by Thomas Dixon, Jr. These books were read and studied carefully, discussed freely and it was the consensus of opinion that these books ought never to be found in the circulating library. Elizabeth has touched one of the vital points. She wishes she knew whether her "heroine" (if it could be possible to call the cigarette-smoking, wine-drinking Lily Dart a "heroine") did actually, intentionally or accidentally kill herself by "an overdose of her favorite drug." With Sir Gilbert Parker's books, "When Routledge Rides Alone" and hundreds of such books available, such books as "The House of Mirth," "The Masqueraders," "The One Woman," "The Awakening of Helena Richie" and "The Iron Woman" ought to be condemned and banished from the book shelves of all lovers of pure literature. We have heard of the yellow-covered novel, but poison can lurk between attractive covers.

Yes, we want our sons and daughters to keep out of the pitfalls, and they should know that such things exist, but it is not necessary that they go near such things and lean over to look into them. Girls have been overcome with giddiness and have fallen in; young fellows, fine, tall, stalwart lads, have thought they could stroll along the edge only to find out that the edge crumbled away and that they needed the life-line.

Other phases of our many sided-lives press upon us and our attention is needed in the pantry where Eva Jones gives us her recipe for making whole-wheat bread:

One and one-half cakes of yeast, one and one-half cupfuls of lukewarm water, one and one-half cupfuls of milk scalded and cooled, seven and one-half cupfuls of whole-wheat flour, three tablespoonfuls of brown sugar, one and one-half teaspoonfuls of salt and three tablespoonfuls of butter or lard, melted. Dissolve yeast in lukewarm liquid, add lard or butter, then flour gradually, as whole-wheat flour absorbs moisture slowly, and lastly add the salt. Knead thoroughly, being sure to keep dough soft. Place in well-greased bowl, cover and set aside in warm place to rise for two hours. When double in bulk turn out on kneading board, mold into loaves, place in well-greased pans, cover and let rise for one hour or until light. Bake in oven (a little slower than you would for white bread) one hour and five minutes. I have used this recipe for years and always have good success.

Your editor hopes that a number of you will clip out this recipe and later on be able to tell the department how fine the whole-wheat bread is.

In the kitchen and in the milk house on the Royse Farm in Oklahoma the dish cloths and the milk

Use Caution—Don't be Defrauded!

The great popularity and the heavy demand for the famous Martha Washington Comfort Shoes made only by the F. Mayer Boot & Shoe Co. of Milwaukee, have caused dishonest dealers to sell cheap and inferior imitations to their customers when the genuine Martha Washington was wanted and asked for.

Mayer Martha Washington Comfort Shoes

cloths are kept sanitary, and this is how Mrs. Royse goes about it:

The towels which are used to dry the dishes and cooking utensils should never be put in with the weekly wash, but laundered to themselves in the dishpan. Soak them over night in a good warm suds. Rub well next morning and boil in suds containing one-half cupful of washing fluid made of one gallon of rain water and one ounce of turpentine, one ounce of household ammonia; or, in place of washing fluid, a tablespoonful of baking soda. Rinse well, then blue. This takes very little time and if care is used to wash when slightly soiled they can be kept clear and white. It also makes washing easier to have this part of the work done. Milk cloths should be treated in the same manner, except they should not be blued. A bag made of oilcloth hung on or near the kitchen cabinet to hold the soiled towels is a convenient and sanitary method of keeping them until washing time.

Concerned about the troubles that have befallen some of our house mothers, Mrs. M. Sullivan tells how they may be overcome. This is her first welcome "Among Ourselves." Let us hope that it will not be the last time we have the pleasure of having her give of her experience:

To freshen the lard you already have, melt it and to every one-half gallon peel and slice two potatoes about the size of a common cup. Boil slowly till the potatoes are cooked and strain through a cloth. Try a small amount first. To prevent worms getting into dried fruit heat it in the oven after it is well dried. For the five-months-old baby put on his under garments, not the same ones he has in the daytime; have a different set of garments for night and day. Make little gowns out of tennis flannel and put a draw string in the bottom. When you have put them on baby pull up the draw string and tie. Have a blanket or quilt warm, wrap him in it and put him in the bed. When the bed gets warm loosen the blanket around him, and when he gets a little older, if you leave him in the bed in the morning while you get breakfast, take a safety pin and pin his clothes to the bed clothes and he cannot fall out. Have a little night cap made of tennis flannel also. I have enjoyed the book talks very much, as I am a great reader. Could someone tell me where I could get "Dorothy Vernon of Haddon Hall?"

I am looking forward to being able to make a demand upon our chief editor and manager for what Oliver Twist asked for, "more," when all those letters come in that you are preparing for our next contest. I had hardly sent out the notice when the postman brought me a letter about how a certain family had put in a water system in the home and in the barn. Curious things happen to an editor at times. Of course, it doesn't need to be such a big thing as that for you to tell us about, but do let us know in a helpful way what you have around your house that you have made yourself, or the "guid mon," because it might lighten the burdens of some of the rest of us. It's all "Among Ourselves."

Big Doll For You

Nearly Two Feet Tall

This beautiful doll is 18 inches tall, jointed at shoulders and hips. Her eyes open and shut, she has long flaxen hair and is beautifully dressed. You will be the proudest girl in your neighborhood, when you get this doll, and she is yours for just a little easy work. I expect to give away 5,000 of them. Write today for great free offer.

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

INACHA'S MOTTO.

Do it today; tomorrow may be too late.

WAVE'S MEMORY GEM.

Little by little the time goes by,
Short if you sing through it, long if you sigh;
Little by little, an hour a day,
Gone with the years that have vanished away;
Little by little the race is run,
Trouble and waiting and toil are done.

SUNFLOWER WRITES A POEM.

First comes the robin with the red breast;
He flies to a tree and builds him a nest.
Next comes the blue jay, with blue on his head;
I know he is looking to find him a bed.
Next is the oriole, with red, green and gray;
There he goes flying, happy and gay.
Now come the others to find them a nest;
I do hope they'll find one, so that they may rest.

ROLL OF HONOR.

Active Artist, Adelheid, A. M. D., Andrés, Anne of Green Gables, Arolf, Baby's Brother, Banker, Beatta, Belda, Bethenda, Bonnie, Brightness, Brown-eyed Lark, Bruna, Charmion, Clover Leaf, Dandy, Dante, Dimple, Doll, Ego, Elberta, Ess Ess, Evadela, Fairbury, Faithful Pet, Farmer Lassie, Four-leaf Clover, Garda, Glory, Gold Jessie, Hart, Healthy, Homer Rice, Housekeeper, Hula Hula, Iowa, Iowa Chimes, Jodi, Jolly Sixteen, Lady Tippins, Lamplight, Len, Little Beauty, Liza, Long Pete, Lotus Blossom, Love, Marinuka, Marjorie, Mary, Mignonette, Mizzie, Mossy, Nebraska Farmer, Negah, Nellie Rose, Patch, Peggy, Petra, Phyllis, Poser, Princess Yetive, Prophylactic, Putnam, Queen, Rebecca of Sunnybrook Farm, Regena, Rosebud, Rosy Plum, Russet, Selma Fern, Sunflower, Tiberia, Toots, Verano, Violet Eyes, Vivid, White Water Lily, Wilna, Zerlina.

All these young folks won their place here by sending handiwork in the contest ending January 31st.

Pansy badges were sent to Retha, Silver Star and Thalia. A silver badge was sent to Little Beauty. This makes three who are wearing our silver honor badge. We will be glad to publish their photos if Iowa and Partner will send theirs; Little Beauty's was published sometime ago.

THOSE BEHEADMENTS YET.

Still they come, answers to the beheadments, Dorothy Jordan, Ella Robins, Franklin Potter, Grace Bingman, Ilah Miller, Silvery Wings and Sly Fox being the latest comers; these swell the total to 310 solvers. Next week we will begin to publish the names of the solvers of the three interesting puzzles for which a prize was offered for best list of answers.

ANSWERS TO THE BEHEADMENTS.

Cape, ape; glasses, lasses; pink, ink; slate, late; cart, art; spool, pool; stool, tool; pear, ear; sweep, weep; hair, air.

THE HANDIWORK CONTEST.

This was a very interesting contest for Aunt Mary and her family and neighbors, all of whom were eager to see the pretty and novel things that were produced from the small capital of five cents. In all 104 entries were made, so additional prizes were given. Beside the prize winners, all the others get positions on the Roll of Honor, which today is given up entirely to the handiwork contestants.

The first prize, a camera, is awarded to Gladys Hunt, Hendersonville, Tenn., age 14, for a wee pair of mittens. Gladys carded and spun the wool into yarn, and then knitted it into mittens; and their smoothness and perfect shape showed great care throughout.

Second prize, a pen knife, is given to "Helen Pink," Kingsley, Iowa, age 13, for a beautiful corn-husk-trimmed box.

Third, a book, goes to "Sandhill Savage," Sutherland, Neb., age 12, whose entry was a whisk broom made of swamp grass, very useful and well made, but costing nothing.

Fourth, paints, to Marjorie Seitel, Correctionville, Iowa, age 8, table mat.

Fifth, a book, to Frances B. Dann, De Witt, Iowa, dainty tatted lace jabot. Frances says she can make ten from a five-cent spool of thread, and they make beautiful gifts.

Sixth, a book, to "Silver Threads," Des Moines, Iowa, age 14, for an odd specimen of hand carving.

Seventh, a book, to "Ike," Curlew, Ia., age 8, very pretty bunch of flowers.

Eighth, a book, to Whitefield Adamson, Nelson, Neb., age 11, match scratcher.

Ninth, a book, to "Thora," Avoca, Ia., pretty pink puff bag with round mirror in the bottom.

Tenth, a book, to "Harry," Bryant, Wis., age 14, netted doily.

Eleventh, a necklace, to "Robin," Memphis, Mo., age 12, hand-embroidered doll dress and bonnet, beautifully worked.

Twelfth, a necklace, to "Verneal," Blue Springs, Neb., age 12, for a Battenberg doily.

Thirteenth, a box of stationery, to "Oriola," Sioux Fals, S. D., candy book bound in black velvet.

Fourteenth, a necklace, to Olga Lofgren, Stephenson, Mich, age 13, for a crocheted heart-shaped cushion.

Fifteenth, a box of stationery, to "Honey Bunch," Humboldt, Neb., age 15, gray oval doily worked in French knots.

Sixteenth, ten post cards, to "Saida," Fond du Lac, Wis., crocheted doily in little circles.

Seventeenth, ten post cards, to "Iowa Star," Mt. Pleasant, Iowa, age 16, sewing apron, every stitch set by hand.

Eighteenth, ten post cards, to "Yerma," Richfield, Wis., age 18, an embroidered bib.

Two special prizes were awarded and sent in the middle of the contest for promptness to "Minnesota Lassie," Dawson, Minn., and "Dakota Blue Eyes," Watertown, S. D.

There were twenty-one specimens of drawing or painting, seven cushions or cushion tops, six paper entries, including calendars, flowers, etc.; six pin and needle cases of various kinds; six entries of doll clothes; five samples of sewing; four jabots, all different; three handkerchiefs and three bags; two baby bonnets and two match scratchers; some lace, sachet bags, doll chair, guest book, recipe case, booklet illustrating all the administrations, an apron, a woven rug, a photo, a stamp case, a napkin ring, a basket and a memorandum novelty.

It shows that anyone can make pretty and useful things with a very small outlay of money, if they only use their ingenuity and take pains with their work. Aunt Mary thanks all who took part in the contest.

HER VALENTINE.

By Sharlot.

Veda Vale was a country girl and went to a district school. Her father was not a very good farmer, and did not have a very large farm, but that would not have made any difference if Veda herself had been different. As it was, they did not like her very well, the girls who went to her school. There were seven beside herself. The reason, they said that they did not like her was because she was so selfish and cold hearted. Everyone has a warm spot in their heart, varying in size, however, outward appearances seem. It was four days until St. Valentine's Day, and all were making or buying valentines. Hearts of various sizes were at times fluttering from the desks and seats. Veda's desk never had any on, and none ever were held for her inspection by the other girls. Dora King felt sorry for her, though, as she stood by the window at noon, while all the other girls were busy at valentine making and cutting. Once or twice Dora had seen a tear fall on her hand as she stood there, but the other girls were always too busy to notice. One day Dora told the girls what she had seen. It was just the day before the fourteenth, and they all looked surprised when Dora said she was going to give Veda a valentine. "It wouldn't do any good, would it?" said Reva Spencer, as she finished a particular pretty valentine of silk tissue and red roses. "I don't know, but I'm going to try it, anyway," said Dora, in a low tone so that Veda would not hear. "Well, I'll give this one," said Reva, showing the girls the prettiest one. "Your very prettiest!" said Lena Journell, a girl of about eleven. All the girls soon repented of their bad behavior and selected their prettiest for her. She was greatly surprised the next day when all the girls showered them in her lap. She could not keep back a few tears and said, after she had looked at them all, "I can't thank you enough, girls, but I'll try to, by loving you all." And the next day they each found a pretty valentine from "Veda Vale, your loving schoolmate."

Have a care how you allow the stock to run in the fields while the ground is so soft. It doesn't appear to injure it, but when you come to farm it, you'll find it packed and hard, and cultivation will be difficult throughout the entire season. Keep a close watch on the meadows, too. Don't allow a hoof on them these days of soft sod.

COME

to See Me at Waterloo!

Galloway wants you as his guest at Waterloo—COME! Jump on the train and come—quick—spend at least a day or two—stay a week if you like—go through the great Galloway Factories and see for yourself how and why Galloway saves his Farmer Friends big money on the best Engines, Manure Spreaders and Cream Separators.

I Will Entertain You at the Agricultural Club

Everything free—no expense. From the moment you get off the car at Galloway Station I foot the bills—you're visiting me. Stop at the $50,000 Agricultural Club built for the Farmers. Splendid meals; music; plenty of good company—over 500 of my farmer friends here last week!

No Obligation to Buy!

Just come and look around—enjoy yourself to the limit—but remember you're under no obligation to buy any Galloway goods—not the slightest. I'll show you the finest chain of factories you ever saw, explain everything—give you my lowest special factory-to-farm, one-small-profit prices. If you see a big bargain and want it, all right—if not, all right. Just suit yourself!

If You Can't Come to See Me Now, Write Any Way!

The International Sunday School Lesson

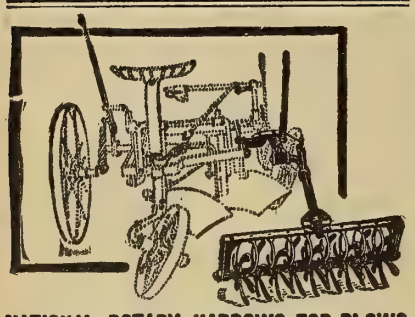
FIRST QUARTER. LESSON VIII. GEN. XIII., 1-18 February 23, 1913

ABRAM AND LOT—THE STORY.

Abram probably followed the great desert highway which still exists between the East and Damascus, the very same, probably, that his grandson Jacob took in his flight from his angry brother. To all outward appearances, Abram's company probably exactly resembled the caravan which the traveler in the East sees today. There were the camels, "ships of the desert," bearing their precious freight of women and children, besides provisions and merchandise. There were the flocks and herds and their attendants, besides the armed guard. The oak or oak grove of Moreh in Sichen is the first-mentioned camping place of the patriarch within the bounds of the promised land. Abram's first recorded act is significant. Columbus standing on the shore of the New World, unfurled the standard of Ferdinand. Abram, coming into Canaan, built an altar to God. So it became his custom "Where Abraham had a tent, God had an altar." These became a series of "sermons in stone" to the idol-worshiping Canaanites. The first mention made of Abraham on his return from his enforced sojourn in Egypt is concerning his wealth. The statement of the artless narrative is simply, "Abraham was very rich in cattle, in silver, and in gold." God's promise of temporal blessings had an early fulfilment Kitto's computation are curious rather than reliable. On the data of the possessions of Jacob and Job he estimates Abraham as having between 8,000 and 9,000 head. Of course, such immense herds and flocks would imply a correspondingly large number of attendants. From the incident of the equipment of 318 men for war it may be figured that there were something over 1,000 men in the camp, not to mention women and children. Up to this time Abraham and Lot had shared the pleasures and hardships of their pilgrim life. But now the herds of both had increased "so that the land was not able to bear them that they might dwell together." So, as sometimes occurs to this day, the herdsmen became rivals, and strove for pasturage and water. In this incident Abraham's character shines resplendent. Two thousand years before Christ he showed the Christian spirit when he said to Lot, "Let there be no strife between me and thee and between my herdsmen and thy herdsmen; for we be brethren." Nor are these mere words. Abraham backs them up. He waives his right. The land was his. It was all his. Yet in noble magnanimity he said to Lot: "Is not the whole land before thee? Separate thyself, I pray thee, from me. If thou wilt take the left hand, then I will go to the right; or if thou depart to the right hand, then I will go to the left." Lot's selfishness crops out. He took advantage of Abraham's generosity. He cast his eye on the well-watered plain of Jordan, and chose it. He journeyed east. It was not long before he exchanged pastoral life for urban. He attempted the impossible. A double service—God and riches—met the inveterate and historic outcome. Another incident in the career of Lot is the occasion of the display of new traits in the admirable character of Abraham: decision, bravery, military skill. Lot is in trouble. The very wealth he coveted and the richness of the land he chose was the cause of it. A rumor brings tidings of a predatory incursion and of Lot's captivity. Abraham determines his course instantly. Lot must be rescued. companies of trained servants, born in his camp, are armed; and Abraham takes command in person. Strategy gains a victory. Generosity declines the spoils.

The Teacher's Lantern.

Biography composes a large part of Scripture. God's Book has a deal by man in it. It is well it is so. Men of the Bible stand for ideas: Abel, innocence; Noah, obedience; Jacob, persistence; Moses, law; Aaron, worship; Joshua, courage; David, praise; Solomon, wisdom, Jeremiah, patriotism; Paul, zeal; John, love. Thus God teaches by example. Example is better than precept. Want a boy to love his country, give him the life of a patriot; to be successful in business, give him the life of one of the "captains of industry." So God deals with his larger children: gives us examples. Good for imitation, bad for avoidance. So in studying Bible characters we are not to entertain ourselves with trivial incident, but find what they stand for, the virtue or the vice they incarnate. Biography of the Bible reaches its highest note in the life of Jesus. Christianity, in final analysis, is the religion of a Person; not of a dogma, creed, or system of theology or ecclesiasticism. At heart of it is the Person. Truth is so shrined in Him that He could say, "I am the truth." There is one little passage in the account of Abram's entrance to the promised land. It might escape the superficial reader, but is worthy of attention. "And the Canaanite was then in the land." The patriarch came into the land the Lord had indicated to him, only to find it preoccupied. He might have reasoned, "How can I ever, with my paltry band, drive out these warlike nations?" The incident seems not to have given him any concern. Fact is, he was not reasoning. He was trusting. Again there was something besides Canaanites. "There was a famine." What, in the land which was to flow in milk and honey! Abraham did not fret. He did the wise thing. He went to Egypt on a visit.



NATIONAL ROTARY HARROWS FOR PLOWS

It will surprise you to know the low price that we are quoting the first ten farmers in each township on our famous Rotary Harrows for Plows, to quickly introduce them. We refund the purchase price and pay freight charges if not satisfactory. 75,000 in use and sales doubling each season. Pays for itself on first five acres plowed. Guaranteed to increase yield twenty per cent. The new way of harrowing as you plow proved to the farmers last season that it saves time, labor and money in preparing the seed bed. Write us today for special introductory prices and circulars.

NATIONAL HARROW CO. LEROY, ILLINOIS

SEED CORN

Bred for high yield by "The Man Who Does Things With Corn," will average an increase in yield of ten bushels per acre above what even the best pure-bred varieties will give under identical conditions.

EVERY EAR GROWN ON MY SUNKIST FARMS
Every Ear Selected in Early Fall and Dried on A Rack

Practically 100% STRONG sprouts, both root and stem sprouts starting vigorously at low temperatures and showing ability to withstand cold rains and unfavorable conditions at planting time.

Every bushel sold on ten days' approval—If it doesn't please in every respect, ship it back at my expense and get your money back. I think it's the best seed to be sold this year—but you can be judge.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

The pattern, No. 5982, is cut in sizes 6, 8, 10 and 12 years. Medium size requires 2½ yards of 44-inch material with 2 yards of edging. Price of pattern, ten cents.

5946 Lady's Coat—This is the new fashionable coat model made in the stylish 32½-inch length, with straight or cutaway fronts, with or without vest and with two styles of collars. The regular coating fabric may be employed and a nice idea is to make the collar and revers of moire or brocade satin.

The pattern, No. 5946, is cut in sizes 32 to 42 inches bust measure. Medium size requires 2⅝ yards of 54-inch material. Price of pattern, ten cents.

5601 Lady's Eight-Gored Skirt—The skirt given in this design represents one of the newest models of the season. The garment is cut in eight perfectly proportioned gores, and has the closing at the left side of the back. It may be developed for separate wear or as part of a coat suit or complete costume in any wanted material.

The pattern, No. 5601, is cut in sizes 22 to 30 inches waist measure. Medium size requires 6 yards of 36-inch material. Price of pattern, ten cents.

5919 Girl's Dress—Here is a charming little frock with the closing at the back in Duchess style. It has separate guimpe which may be worn or omitted as preferred. The square neck is outlined with contrasting goods with which the sleeves and belt are also trimmed. Any wanted wash material may be used.

The pattern, No. 5919, is cut in sizes 6 to 12 years. Medium size requires 2⅜ yards of 36-inch material and ⅛ of a yard of 27-inch contrasting goods for dress and 1⅝ yards of 27-inch material or 1¼ yards of 36-inch goods for guimpe. Price of pattern, ten cents.

5857 Girl's Dress—Any little girl would look charming in this attractive frock, which is simplicity itself in construction. It is plaited in pleasing fashion and held in fashion by a belt. The neck is finished with a neat turn-down collar and the sleeves have chic rolled-back cuffs. Collar and cuffs are of contrasting materials. Linen, gingham, percale and pique are among the most serviceable fabrics for a garment of this nature.

The pattern, No. 5857, is cut in sizes 6 to 12 years. Medium size requires 3 yards of 36-inch material and ⅜ of a yard of 27-inch contrasting goods. Price of pattern, ten cents.

6043 Lady's Dress—This stylish frock closes at the front and the three-gored skirt is made with the Empire waist line. The new drooping shoulders are seen, also the turn-over collar. Collar, cuffs and skirt insert are of contrasting material, which furnishes a pretty trimming note to the garment.

The pattern, No. 6043, is cut in sizes 34 to 42 inches bust measure. Medium size will require 6⅞ yards of 27-inch goods or 5¼ yards of material 36 inches wide, with ¾ of a yard of 27-inch contrasting goods. Price of pattern, ten cents.

5982 Girl's Empire Dress—This pretty little Empire dress closes at the front. Any of the soft materials can be used to make it.

NEWS OF THE SALE RING.

Dorr's Poland China Sale.

Henry Dorr, Remsen, Iowa, sold his annual offering of bred Poland China sows Tuesday, February 11th, to a good gathering of breeders from Iowa and neighboring states and to farmers of the nearby territory who are in the market for improvements in their live stock. There was nothing at all sensational about the prices secured, though the offering sold well, averaging for the sixty head a little over $100. The top sow was No. 5, a fall gilt, full sister to the first-prize gilt at Sioux City last fall, and went to Bruce Francisco, Hastings, Neb., at $260. Her sister was purchased by Fred Drolle, Mission Hill, S. D., at $240. Many names prominent among the breeders of South Dakota, Nebraska, Minnesota, Illinois and Indiana appear in the list of buyers given below. Harvey Johnson, Logan, Ia., took No. 1 of the catalog, Expansion Nora, bred to the big-boned young boar, D.'s Monarch, a boar that promises well in this herd. J. E. Adams, Webster City, Iowa, took several good ones home and was a contender for many others of the best. Several of the good ones went to Henry Bros., Sheldon, Iowa, who were also prominent in the bidding on the choicer stock throughout the sale. Col. H. S. Duncan was in charge of the sale, assisted by Cols. J. A. Benson and H. O. Sellier. The following is a list of the buyers:

1. Harvey Johnson, Logan, Ia.--$185.00
2. Henry Bros. Co., Sheldon, Ia.- 135.00
3. James Williams, Marcus, Ia.- 115.00
4. Fred Drolle, Mission Hill, S. D. 240.00
5. H. B. Francisco, Hastings, Neb. 260.00
6. Henry Bros. 145.00
7. Henry Lewin, Hartford, S. D. 170.00
8. E. S. Barker, Doon, Iowa--- 125.00
9. L. E. Daly, Egan, S. D.---- 95.00
10. J. C. Meese, Ord, Neb---- 140.00
11. Harry Dodds, Florence, Neb- 130.00
11½. J. E. Adams, Webster City, Iowa 132.50
12. Ben Snyder, Marcus, Iowa--- 140.00
13. Will Henry, Marcus, Iowa--- 215.00
14. J. L. McDonald, Lytton, Iowa 95.00
15. Henry Bros. 160.00
16. Chas. Trienen, Remsen, Iowa- 80.00
17. Henry White, Trivoli, Ill.--- 75.00
18. A. Ufkin, Remsen, Iowa---- 110.00
19. E. P. Wellborn, Cythiana, Ind. 155.00
20. Harry Dodds 95.00
21. W. T. McLaughlin, Manson, Iowa 100.00
22. Lee Michaels, Springfield, S. D. 85.00
23. C. F. Barrett, Doon, Iowa--- 95.00
24. Ben Gash, Fonda, Iowa----- 65.00
25. Wm. Schreier, Alton, Iowa--- 70.00
26. Henry White 67.50
29. Dan Thornton, Lanesboro, Minn. 67.50
30. Will Henry 85.00
31. Dan Thornton 80.00
32. Wm. Weiss, Cherokee, Iowa- 57.50
34. Geo. H. Paul, Washington, Iowa 80.00

Waltemeyer Bros.' Duroc Sale.

On February 11th, Waltemeyer Bros., Melbourne, Iowa, held their sale of prize-winning Duroc Jersey bred sows as previously advertised in this paper. Many old breeders and good judges pronounced the offering as the best lot of sows they had ever seen pass through a sale ring. Every man who bought a sow in this sale got value received. Ohio Queen, the great grand champion sow, was a bargain at $285, selling to H. R. Heishman, LaMoille, Iowa. Golden Queen 36th, the first-prize gilt at Des Moines, sold for $200 to W. N. Shanks. Ten states were represented at the sale, which shows the widespread interest in the Golden Model family. S. E. Eakle, Prophetstown, Ill., bought a good fall boar pig by Golden Model II. at $127.50. N. G. Kraschel did a most excellent job of selling the offering. His opening address was exceedingly appropriate and to the point. H. S. Allen and John Garis assisted in the sale. No animal sold under $57.50, as the complete list below shows:

1. H. R. Heishman, LaMoille, Ia.$285.00
2. McNiff Bros., Luverne, Minn- 150.00

Lamb's Duroc Sale.

On Wednesday, February 12th, A. W. Lamb, Albion, Neb., held his sixth annual sale of Duroc Jerseys. The offering was in splendid brood sow form, the sows showing careful feeding such as was expected from both farmers and breeders who were acquainted with Mr. Lamb and his herd. Mr. Lamb is to be congratulated for the good showing made by the farmers of his neighborhood at this sale. A large crowd was present. Colonel Callahan conducted the sale in his usual efficient manner and when it was finished it was found that the fifty head averaged $57.85. Below is a list of the sales:

1. F. B. Nelson, Lindsay, Neb--$125.00
2. Robt. Leisy, Wisner, Neb---- 85.00
3. M. W. Walker & Son, Malta Bend, Mo. 82.50
4. F. W. Sellers, Ainsworth, Neb. 70.00
5. J. P. Petersen, Herman, Neb- 65.00
6. F. A. Baldwin, Ainsworth, Neb. 62.50
7. J. S. Golder, Oakland, Neb--- 75.00
8. Earl Hutchinson, Loretto, Neb. 60.00
9. John Bader, Scribner, Neb--- 67.00
10. J. S. Golder---------- 110.00
11. Robt. Hansen, Albion, Neb-- 60.00
12. J. A. Meyers, Loretto, Neb-- 66.00
13. W. J. Fisher, Petersburg, Neb. 60.00
14. C. E. Petersen, Genoa, Neb-- 62.50
15. Clarence Wallace, Wisner, Neb. 47.50
16. J. A. Meyers---------- 58.00
17. F. A. Lemmerman, Creston, Neb. 65.00
18. Jonas Lindquist, Scribner, Neb. 45.00
19. A. Widle & Son, Genoa, Neb-- 60.00

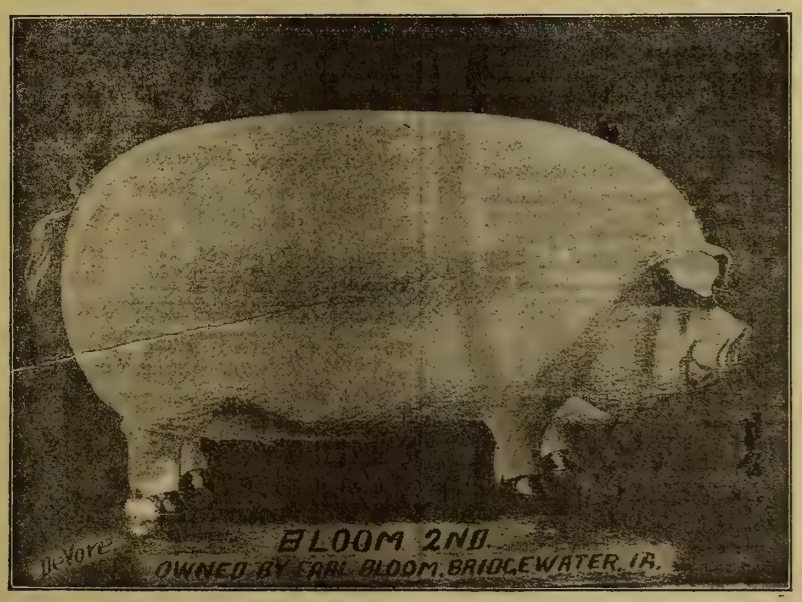
49. A. Greenwood ---------- 31.00
50. Fred Barnes ---------- 35.00

H. H. Shaw's Duroc Jersey Sale.

A splendid gathering of farmers and a grand attendance of leading Duroc breeders were in attendance at the H. H. Shaw sale of Duroc Jerseys held at Hebron, Neb., on February 11th. The offering was hardly up to the standard usually put up by this enterprising breeder, owing to the fact that he was a little short of material to make the sale and was obliged to include some that were small and that cut the average a great deal. Some excellent sows were listed, however, and while the writer is of the opinion that Mr. Shaw has made a mistake in several of his sales to sell as valuable sows as he has offered, yet they should be money makers for the buyers. Mr. Shaw buys the best stuff to be had whenever he buys at all, but that class of stuff is hardly profitable selling stock for a man who has had only a few years in the business. The top of the sale was the great Lincoln Wonder sow, Hebron Queen, and she went to the good breeder, E. L. Busch, Syracuse, Neb., at $85. The entire cataloged offering of forty-two head made an average of $35.25. Those selling for $40 or more are listed:

1. E. L. Busch, Syracuse, Neb------$85
3. H. B. Miner, Guide Rock, Neb--- 50
4. W. E. Monasmith, Formoso, Kan. 40
5. A. Pew, Hebron, Neb---------- 46
6. C. H. Koenig, Plymouth, Neb---- 46
10. A. J. Duerr, Milford, Neb------- 40
11. W. T. Lucas, Chester, Neb------ 41
15. A. F. Velte, Hebron, Neb-------- 41
16. W. T. Lucas---------- 40
17. W. T. Lucas---------- 40
20. Ralph Wilson, Hebron, Neb----- 46
29. A. J. Duerr---------- 42
31. Wm. Retzlaff, Bennet, Neb------ 45



BLOOM'S CHESTER WHITES.

The above engraving shows Bloom 2d, a Chester White show sow owned by Earl Bloom, Bridgewater, Iowa. This animal has never been beaten in any show ring and a competent judge expressed the opinion that she would win against hogs that took ribbons at the Iowa State Fair. Mr. Bloom informs us that he still has for sale a few more bred sows and gilts and that he is booking orders for pigs. Some of these are bred almost exactly like the sow shown in the picture. See advertisement elsewhere in this paper and for information write to the above address.

One of the Large Wheat Fields in the Shallow Water District

Logan county, Colorado. This field yielded 46 bu. per acre. This is the finest farm land in the West and we are selling it at the very lowest prices. One crop pays for the land. Finest soil and water. Close to market. Agents wanted. Write for free circular. Address

Platte River Valley Land Company

1119-22 City National Bank. OMAHA, NEBRASKA.

FREE BEAUTIFUL illustrated literature describing cheap Minnesota Park Region Lands, so easily purchased from our company. Write land agent, C. K. I. & P. Ry., 116 Wolvin building, Duluth, Minnesota.

WRITE OWNER Half section farm—No. 1 land and improvements, near town and school. Great bargain. Seventy-six dollars per acre. **Arthur McCarten, Marshall, Minn.**

TEXAS! 4,686 ACRES $7.50 per acre. Near Longview. 240 acres joining Marlin, $125.00 per acre. Write for land list. **JOE LYONS. - Desk 5, Marlin, Texas**

WE SELL OCEANA FARMS—GREATEST fruit county. Also Potatoes, Corn, Alfalfa, Stock. List free. **HANSON & SON, Hart, Mich.**

Corn and cows are a winning combination in the Ozarks.

MR. Hosmer and his son bought a farm near Marshfield, Missouri, a few years back, at $10 to $15 per acre. To-day that farm couldn't be bought for $75 to $150 per acre, and is bringing an annual net income of over $5,000.

When the Hosmers took hold of this place, it was said that the corn couldn't be grown high enough to hide a 10-year old boy—but now they are making from 60 to 80 bushels *per acre* regularly. And they are averaging around $90 per year per cow!

H. S. Harris says: "My milk production for the six months from April to November (milking an average of 15 cows, about one-half of which are two-year olds), was 8,135 gallons, which sold at 16 cents per gallon, or $1,301.60. *Feed all raised on my farm*, except salt."

Mr. Holloway, another Ozark dairyman, says: "I find this country the best for farming and *far* the best for dairying. The healthful, mild climate cannot be beat. I know this, for I have traveled a great deal; have been in nearly every State in the Union."

These experiences prove what an expert on dairy husbandry said a while back: "Not only are the Ozarks adapted for dairying but are certain to be noted far and wide in the future for this industry Butter fat can be produced cheaper in the Ozarks than anywhere else."

With plenty of good pasture land, an unlimited amount of pure water, with soil that will grow every variety of grains and grasses, with short, mild winters that permit grazing most of the year and make expensive shelter unnecessary—stock raising of every kind is more profitable in the Ozarks.

Ozark farmers are producing pork at 2½ cents a pound, and selling it at 8 cents or more. They are making around $12 per ewe; with the sheep feeding almost entirely on native wild grass.

The closeness of Kansas City, Memphis and St. Louis—offering tip-top prices—has a great deal to do with the big net profits which Ozark farmers get.

But all these advantages mean more when it is realized that good land can be bought now in the Ozarks at $12 to $15 per acre. It's a proposition that deserves any man's serious thought and investigation right *now!*

A free book for you!

It's not the kind you can pick up anywhere. Double sized pages, 75 actual photo pictures of farms—some in full color. Written by a man who knows farming. Takes up the Ozark sections, county by county, and describes the farming conditions there. Also tells actual experiences of Ozark farmers. I haven't many copies of this book on hand; please drop me a postal to-day for your free copy.

FRISCO LINES

Frank Anderson, Director of Development, 1502 Frisco Bldg., St. Louis, Mo.

"Farmers' Pride"

A General Purpose Saddle That Fills Every Need. **Special Price for March and April** **$9.67**

Seldom is an opportunity offered to buy a good saddle at a low price, and never has so fine a saddle as our "Farmers' Pride" been offered at anywhere near the price we are quoting. Just another example of Sears, Roebuck and Co.'s policy of distributing dependable merchandise at prices based on production cost plus **one** profit.

This is the way we make it:

TREE—13½-inch, Morgan style, steel fork and horn; sheepskin covered bars, making the saddle easy on the horse's back.
SKIRTS—21 inches long.
RIGGING—Double cinch rigged, with 1-inch tie straps to tie; 4-inch soft hair cinches.
SEAT—Half leather covered, roll cantle.
STIRRUP STRAPS—1½ inches wide, full length, to buckle; fenders, 6½ inches wide, 13½ inches long, attached; 3-inch Texas bolt stirrups.
Weight of saddle, about 13 pounds; packed for shipment, about 20 pounds.

No. 10W3513021/4 Price.....$9.67

Send us an order for either or both of these items and we will ship promptly. Your money back if you are not pleased. Take advantage of these low prices now, as hides are scarce and leather is steadily advancing in price. This is an opportunity that will not be presented again. Our complete line of exceptional values in harness, saddlery and accessories is shown in our beautifully illustrated 80-page Special Harness Catalog. Write "Harness" on a postal card, sign your name and address and we will mail you this catalog postpaid. Act now and send us an order and save money.

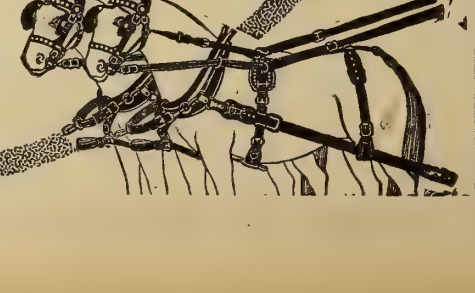
Our "Mansfield" Farm Harness

is still another money saving bargain in a strong, serviceable double farm harness worth almost twice the price we ask for it. Following are the specifications:

BRIDLES—⅞-inch short cheeks, round side reins, sensible blinds, nickel spots.
LINES—1¼ inches wide, 18 feet long.
HAMES—Wood, iron bound, square staple; Moeller hame tugs, jointed Concord clip attachments; 1½-inch breast straps and martingales, with collar straps.
TRACES—1¾ inches wide, Moeller clip cockeyes.
TRIMMINGS—XC buckles.
Weight, packed for shipment, about 80 pounds.
No. 10W35567¼ Price, without collars..... **$32.79**

PADS—Flat harness leather, felt lined; drop hooks and terrets; nickel spots; folded bellybands; 1⅛-inch hip and back straps; scalloped safes, cruppers buckled on; Cooper's trace carriers, nickel spotted on outside.

A BARGAIN ONLY $32.79



We guarantee this saddle or harness to give you satisfactory service.

Chicago, Ill.

NEWS OF THE SALE RING.

White & Smith's Short-horn Sale.

The offering of Short-horn cattle held at Chicago, Ill., February 12th, by White & Smith, St. Cloud, Minn., drew a good attendance, a large number of representative breeders being at the ringside. The cattle were presented in excellent condition and the fifty head sold made an average of $261. The top of the sale was $1,425, paid by J. G. Robbins & Son, Horace, Ind., for the show cow, Roan Queen, herself a many times grand champion and carrying a calf to the service of the grand champion, Ringmaster. The fine young cow, Butterscotch, with a bull calf at foot by Ringmaster, went to George H. White, Emerson, Iowa, at $500 and Gloster Queen 2d, with a heifer calf at foot by Ringmaster, fell to Robert R. Ward, Benton, Ill., on a bid of $435. The matured show and breeding bull, Superbus, with a strong record as a sire at Meadow Lawn, went to J. L. McMurray, Corydon, Ia., at the conservative price of $400, and J. R. Harlow, Kempton, Ind., secured good value in the ten-months-old Royal Master by Ringmaster at $310. There was a wide distribution of the cattle, showing very strongly the rising tide in the beef cattle market. Wm. Caruthers, San Francisco, Cal., was a strong bidder all through the sale, securing several head, and James Brown, Chicago, Ill., bought six good ones to add to the herd he is establishing on his farm near Wheaton, Ill. Iowa and Illinois buyers took the bulk of the offering. Leslie Smith conducted the sale in his usual satisfactory manner and Colonels Bellows, Jones and Robson did the selling. The following is a report in detail:

COWS AND HEIFERS.

Roan Queen, calved 1909; J. G. Robbins & Son, Horace, Ind	$1,450

Master Gloster, calved 1912; Wm. Carruthers	180
Master Graceful, calved 1912; A. G. Artman	125

$200

Takes possession of a fertile quarter section in

Southwest Kansas

There's not much vacant land left in Kansas. The five southwestern counties have remained unsettled and undeveloped because of inadequate transportation. The Santa Fe is building new lines to serve this territory, and thousands of farms next season will be put to creating wealth. This is your opportunity to get a good Kansas farm cheap. The terms are advantageous, the results certain.

If you had taken a Kansas farm ten years ago and developed it with intelligence and vigor, you, too, would now be lending money to Wall Street, as other Kansas farmers are doing. You, too, would have a piano in your parlor and an automobile in your barn.

The next best thing is not to lose this opportunity of securing a quarter section of this splendid wheat land.

Besides wheat, oats and barley, you can get good profits out of speltz, milo-maize and kaffir-corn fed to your own stock. Hogs thrive on milo and kaffir, and disease is unknown. Western Kansas farmers find peanuts a splendid hog feed, easily grown and easily fed. Broom corn brings fancy prices, and potatoes, garden truck, fruit and alfalfa will all do well for you.

There are some flowing artesian wells in this territory, and everywhere that wells have been put down water comes to within thirty to sixty feet of the surface. Irrigation by pumping will doubtless be commonly practiced, and the tremendously increased yields will pay big dividends on the small investment required for gasoline or oil driven pumps.

The climate is pleasant and healthful. Your boys and girls will find good schools. Churches, social clubs and farmers' institutes are being organized. Rural telephones and free delivery are coming in. In every way development is rapid, and only a few years will give you every advantage that older communities have.

You can secure a quarter section (160 acres) for only $200 down. The price is $10 to $15 an acre. The terms are astonishingly liberal. Only one-eighth down and one-eighth each year after the second year, with interest at only 6 per cent. You see you have two full seasons before a second payment on the principal is required.

For further information write for illustrated descriptive folder containing map and full details.

Santa Fe Land Improvement Co.
Topeka, Kansas

ALBERTA

The Price of Beef is High and so is the Price of Cattle.

For years the Province of **ALBERTA**, (Western Canada), was the Big Ranching Country. Many of these ranches today are immense grain fields, and the cattle have given place to the cultivation of wheat, oats, barley and flax, the change has made many thousands of Americans, settled on these plains, wealthy, but has increased the price of live stock.

There is splendid opportunity now to get a **FREE HOMESTEAD OF 160 ACRES** (and another as a pre-emption) in the newer districts and produce either cattle or grain. The crops are always good, the climate is excellent, schools and churches are convenient and markets splendid in Manitoba, Saskatchewan or Alberta.

Electric Starting Gasoline Engine

The Electric Starting WOODPECKER

has all the *good* points of *all* good engines and a whole lot more. It is the *only* engine that has in itself *all* the valuable features you would insist on having in *your* engine if you built an engine yourself, after knowing all there is to know about gasoline engines. Made in Middletown for years.

Formerly Called Miami

Where else can you find a gasoline engine that starts on "compression" by the *touch of a button*, sure to work in any weather? That has a self-contained equipment that eliminates fussing with connections every time the engine is moved, that has a hopper cooler, the *only* simple and satisfactory way to keep the cylinder not too hot and not too cool—that is mounted on steel girder subbase—makes foundation needless, and allows placing anywhere at a moment's notice. Has speed regulator—can change speed while running.

In no engine except the Electric Starting Woodpecker can you find all these valuable features. We give

30 Days' Free Trial —No Money Down

—and, in addition, we give a strong guarantee that protects you in every way. Most astounding proposition. Don't miss it. Write us quick for full facts.

LATCH STRING

Is Out for You at GALLOWAY'S

You owe yourself a visit to Waterloo. Come! A little vacation right now will do you a world of good. Come! The moment you get off the car at Galloway Station, you're Galloway's personal guest—no expense, free entertainment—put up at our $60,000 Agricultural Club and enjoy every comfort and luxury. Remember, this Club was built for my farmer friends and their families.

Bargains—If You Want Them!

Go through my factories. See how Galloway Spreaders, Engines, Separators, Harrow Carts, are made. Satisfy yourself about quality—then if you like save big money on anything you need. I'll give you lowest, direct factory prices and a special 5% discount if you cut out and bring this "ad."

No Obligation to Buy

Look around. Have a good time. Get posted on real values. Then, buy if you want to—if not, all right! There are other factories in Waterloo. I'll put you in touch with my competitors so that you can get all the facts. Isn't that square? That's the Galloway idea. Everything fair and square at every turn of the road.

The Widle & Sons Duroc Sale.

A splendid crowd was out to the sale of R. Widle & Sons, at Genoa, Neb., on October 10th and he sold forty head of his tops at an average of $74.65. The forty-eight head that he ran through the ring made an average of $68.70 and it was one of the best sales held this winter in the state. Col. Tom Callahan cried the sale and did good work and was ably assisted by Murray Putnam. Below we list those selling for $40 and above:

1. C. E. Peterson, Genoa, Neb---$125.00
2. Robt. Lisey, Wisner, Neb---- 100.00
3. Frank Desmond, Atlantic, Ia. 75.00
4. A. J. Deuer, Milford, Neb---- 115.00
5. Wm. Moderow, Beemer, Neb- 155.00
6. Clarence Wallace, Wisner, Neb. ---------- 87.50
7. W. J. Welsh, Genoa, Neb---- 45.00
8. A. J. Regier, Henderson, Neb. 140.00
9. Henry Koehlmoos, Pilger, Neb. 60.00
10. B. P. Cedar, Genoa, Neb----- 97.50
11. Fred Nelson, Lindsay, Neb-- 95.00
12. A. R. Barnes, Petersburg, Neb. ---------- 120.00
13. Wm. Moderow ---------- 105.00
14. A. W. Lamb, Albion, Neb---- 65.00
15. O. E. Green, Genoa, Neb----- 40.00
16. J. T. Armstrong & Son, Clarks, Neb. ---------- 55.00
17. A. M. Lidgaard, Bladen, Neb. 85.00

The Nash & Son Poland China Sale.

One of the good sales of Poland Chinas of the season in Nebraska was made by J. T. R. Nash & Son, Minden, Neb., on February 8th. We do not mean that a high average of prices was reached, but we do mean that one of the really good offerings of great big, smooth gilts was sold. There was only a fair local attendance, but quite a good outside gathering, and as there were so many good gilts there was not as high a top as there might have been otherwise; but with a $60 top and a $44 average one will see that it was a very uniform sale. The get of Gold Medal, one of Nash & Son's boars, was in right good demand. Practically everyone from outside was after that breeding. Gold Medal is just one of the best sow sires in Nebraska today. His gilts are big and the real brood sow kind. Col. H. S. Duncan did the selling and certainly put forth every effort to make the sale a success. Those selling for $40 or over are listed:

2. H. T. Blank, Franklin, Neb---$60.00
3. Alvin Windom, Nodaway, Iowa 42.50
4. R. R. Baird, Central City, Neb. 51.00
5. J. P. Peterson, Norman, Neb-- 41.00
7. John Peterson, Heartwell, Neb. 42.50
8. W. M. Bruce, Bertrand, Neb-- 52.50
9. Frank Wilson, Minden, Neb--- 41.00
11. Coleman Bros., Ithaca, Neb--- 60.00
13. G. H. Kleen, Franklin, Neb--- 44.00
14. Geo. Gleason, Heartwell, Neb-- 40.00
15. W. T. Barnes, Bertrand, Neb-- 52.50
16. W. R. Pedley, Bertrand, Neb-- 45.00
18. W. H. Barr & Son, Villisca, Ia. 40.00
20. John Gharst, Riverton, Neb-- 51.00
21. Chas. Linn, Minden, Neb------ 50.00
22. W. T. Barnes---------- 57.50
24. G. H. Kleen---------- 50.00
25. H. T. Blank---------- 45.00

37. E. C. Hummel, Heartwell, Neb. 43.00

Martin's Short-horn and Poland Sale.

Theo. Martin, Bellevue, Iowa, held his sale of Short-horn cattle and Poland China bred sows on February 13th as previously announced in this paper. The nine bulls sold were an extra good lot and it is in very few sales that you see as many good ones sold. Some of the best bulls sold under their value, but Mr. Martin was game and allowed buyers to take them at their own price. Monarch Viceroy, the herd bull, sold to Schultz Bros. at $210, a very moderate price for so good a bull. Count Rosebud, an extra good yearling, sold at the same price to Dan Noonan. The top female was Sweet Fashion, the two-year-old show heifer, she selling to L. T. Frederick, Memphis, Neb., at $220. Those selling above $100 are listed below:

BULLS.

Monarch Viceroy, calved 1905; Schultz Bros., Zwingle, Iowa---$210.00
Monarch's Rosebud, calved 1912; Will Berryman, Scales Mound, Iowa ---------- 185.00
Monarch Victoria, calved 1911; John Husch, Cascade, Iowa---- 175.00

The Car With a Pedigree

There is the same pride in the possession of a "Jack Rabbit" car that there is in the ownership of pure-bred stock. It's the most famous of all automobiles—the car with the choicest pedigree.

The Apperson Jack Rabbit Car

is the direct descendant of the first American-made automobile. This first car was built by the Apperson Brothers, here in Kokomo, in 1893.

While other cars were yet crude and unreliable, the Apperson Brothers made their car reliable and roadworthy. Apperson-made cars have always been

Famous for Durability

Some of these cars are still in use after a service of 17, 18 and 19 years. The average age of the 17,000 cars already in use is 8 years. No "Jack Rabbit" has ever worn out. No other car can approach this record.

Lowest Upkeep

The Apperson is the lifetime car—20 years of proof back of it—20 years or longer of service in it. It's the cheapest car to maintain, too. Easy on tires, low in fuel cost. Almost no expense for mechanical upkeep.

The "Jack Rabbit" is the most satisfying car to own. Powerful, beautiful, comfortable—a real car in every way. **Write for catalog today. NOW.**

Ten Miles For A Cent

A HARLEY-DAVIDSON MOTORCYCLE can be operated at a cost of from one-tenth to one-sixth cent per mile. It costs nothing when idle and will last for years. It is ideal for quick trips to town for repairs and provisions and will carry an extra passenger or freight weighing up to 250 pounds. The

HARLEY-DAVIDSON

is the only motorcycle which has a Ful-Floteing Seat. This device does away with the jolts, jars and vibration so unpleasant on the ordinary motorcycle.

The Free-Wheel Control, another patented feature, does away with the objectionable hard pedaling or running alongside to start. Instead the Harley-Davidson can be stopped and started by the mere shifting of a lever.

Over 3700 Harley-Davidsons (more than all other makes combined) in use in the Government R. F. D. Service Send for literature.

HARLEY-DAVIDSON MOTOR COMPANY
Producers of High Grade Motorcycles For Eleven Years

Bill Galloway Says:

"I Want to Send YOU One of My 1913 Model Spreaders Right to Your Farm—FREE!"

Not One Cent to Pay—No Bank Deposit

Thirty Days' Trial Absolutely FREE!

Just Send Me The Coupon—Do It To-day

DON'T send me a dollar—*no, not one cent!* Keep your money—*let me take the risk.* And I'll do it willingly. Just tell me—*"Galloway, I'm willing to give your new 1913 spreader a good, fair trial at your risk." That's all I ask.* You'll get the spreader just as quick as I can ship it. Test it any way you want to. Then decide whether you want to keep it on this amazingly liberal proposition or send it back and let me pay the freight both ways. I'll put it squarely up to you and I'll accept your decision without a word or question. Now let me tell you briefly

Why I Am Making This Offer:

Now, I know that you can tell more about my spreader **in a half-hour's actual use** than you could by reading all the ads I ever wrote. **So I'm just going to send you the spreader itself and let you be the judge.** I want you to put it through every test you can think of. Take the toughest, tramped-down, unrotted slough-hay manure from the calfyard. **If it's frozen, so much the better.** Drive out into the field—**get your team into a fast trot AND SLAM IT IN GEAR!** Do that *again* and **again,** and **AGAIN!** Then, if you can find any fine, powdered manure, load it in and see how it handles that.

Notice how easy it is to load the low-down body. See how easily **two** horses can do the work it uses up **three or four** horses to do with the big, horse-killing types. Examine the **exclusive patented features.** It's the **only double-drive** spreader on the market having power furnished by BOTH wheels alike to move the load and run the beaters. It's the **only roller-bearing** spreader. It's the **only endless apron, force-feed** spreader. This feature alone makes the Galloway worth $25 more than any other spreader in the world. Notice how the pull between the wheels is brought **entirely** upon the reach, making it **not only the lightest, but the strongest and most durable spreader known.** Use the Galloway a whole month. If that isn't enough, say so, and I'll let you keep it for two or even three months. Then, if you can't honestly say—"Galloway, this is the best spreader in the world"—**then I want you to ship it right back to me and I'll cheerfully pay the freight both ways,** so that the trial won't cost you one single cent.

The Only Way Is the Galloway

Selling Direct From Factory to Farm!

If you do decide to keep my spreader, after having had the free trial, I'll put $25 to $50 in your pocket right at the start. You don't pay any middlemen's profits—you don't pay any salesman or dealer to help you make up your mind. The whole deal is just between you and me—**AND YOU ARE THE SOLE AND ONLY JUDGE.**

Now, Here's Something I've Never Done Before:

I'm going to make you a better proposition for 1913 than anything I've ever made. I'm going to tell you how you can get your spreader **PARTLY OR ENTIRELY FREE!** There's no work, no soliciting, no canvassing—I mean exactly what I say. Can't tell more about it here, but I'll tell you all the details in a personal letter when you write me.

Here's the Kind of Letters I Get Every Single Day

Gentlemen:—I received my spreader and came out home and got a neighbor to help me start it. We loaded a load of light manure and drove on solid ground. The machine went off without a hitch—just fine. So we drove back, and loaded a load of heavier manure and tramped it and drove to the field on a piece of soft plowed ground, and my team weighing 2325 lbs. just went right through with it. My neighbor said he could not see any difference in the draft when in gear or out. From what I have seen the No. 4 is as good as you say. Very truly,
Elk City, Kan. J. D. GRAY

Gentlemen.—The more we use the spreader the better we like it. One of the most attractive things about it is its light draft; two horses take it easily, loaded full up, over soft ground. Yours very truly,
Wappacoma, W. Va. E. HERRIOTT & SON.

Send the Coupon or a Postal or Letter Now!

Get My Three Great Books FREE!

I want you to get my great book "A Streak of Gold" **free.** It's the only book of its kind in the world. It tells you how to make manure so valuable that it's just like finding gold on your farm. Explains how to produce manure; how to care for it, how to spread it. It's a regular fertilizing manual in clear, plain English. The regular price is one dollar, but I'll send it free. Then I'll also send my other two handsome big books and a complete explanation of my big 1913 offer.

Now *write.* Use the coupon or a postal or letter if you want to, but don't put down this paper until you've clinched this great 1913 offer.

The Lonergan Poland China Sale.

A splendid crowd of breeders and farmers attended the D. C. Lonergan sale at Florence, Neb., on February 12th and he sold fifty-five head of Poland Chinas at an average of $70. The top was Victor's Metal, a daughter of Big Victor, and she went to Chas. Grau at $157.50. It was one of the best offerings Mr. Lonergan has ever made and while the outcome was very satisfactory it was deserving of more money. Col. Harve Duncan cried the sale. Below we list those selling for $50 and over:

0. I. N. Minnick, Council Bluffs, Iowa .....$ 52.50

Skillen's Duroc Sale.

R. M. Skillen, Greene, Iowa, held his second annual sale of Durocs on February 10th. Mr. Skillen sold a great lot of sows and at low prices, considering their quality. S. O. Smalling, Laporte City, Iowa, secured an exceptional bargain in No. 1 at $70. Thos. Neal secured the top sow in No. 16 at $75. N. G. Kraschel sold the offering in a very creditable manner. Those selling above $40 are listed below:

1. S. O. Smalling, Laporte City, Iowa $70.00
2. I. P. Candle, Greene, Iowa..... 41.00
4. Oliver McGee, Greene, Iowa... 62.00
5. Oliver McGee 46.00

$250 Motorcycle Given Away

YOU SEE in this picture a boy riding one of the $250 Excelsior Motorcycles we are giving away. In other parts of the picture are the faces of several other boys. They are hard to find, but by turning the picture about you will be able to see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send me your name and address, for I will tell you all about the contest in which you can win the seven-horsepower motorcycle and many other prizes.

1500 Votes Free I will send you a special coupon good for 1,500 votes toward the motorcycle. All you have to do to get this coupon is to send your name and address at once.

SAVE-THE-HORSE
(Trade Mark Registered.)

THE TIME IS NOW

All the winter long, the troubled owner of a lame horse reads our advertisements. Then, day after day slips away, while he talks, laments, listens, takes advice and **hesitating—FAILS TO ACT**—till the Springtime is on him and his horse is not yet able to work. Meantime the thrifty, prosperous, resolute man, reads, considers the evidence carefully—Decides Promptly—and his horse is working in, say, ten days to two weeks. That's exactly what happens every winter.

We Originated the treatment of horses by mail—Under Signed Contract to Return Money if Remedy Fails—and every minute of every day for seventeen years our advice and treatments have been on the way wherever mails go and horses are. Our charges are moderate. Spring work is near; Write.

Our Latest Save-The-Horse BOOK is a Mind Settler—Tells How to Test for Spavin—What to Do for a Lame Horse—Covers 58 Forms of Lameness—Illustrated But write describing your case and we will send our—BOOK—Sample Contract and Advice—ALL FREE—to (Horse Owners and Managers—Only.)

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office

SYMPTOMS AND TREATMENT.

LUMP JAW.

Have a three-year-old cow that has a lump on her left jaw which runs some. I suspect that she has lumpy jaw. Can it be cured, and if so, how?

If the cow is in good flesh, better sell her to the butcher or slaughter her for meat, for lumpy jaw does not affect the flesh of the body, if confined to the head and not in an advanced condition. Treatment of a severe case rarely proves profitable, although it may succeed in time. Treatment consists in cutting out the affected mass and applying caustics to the wound. It is best to have the operation performed by a veterinarian.

BLOOD WORMS.

My two three-year-old horse colts are very poor, though I feed them bright timothy hay, chop corn, oats and oil meal and they have a fairly good appetite. I found little red worms in their droppings. Have given them medicine recommended by a veterinarian, but nothing seems to help them. They have been looking badly for three months.

When a colt becomes infested with these blood worms, as they are called, it rarely survives. To prevent infesting by worms try to provide new, clean pasture for young colts in spring and in addition feed them generously before and after weaning and allow free access to a mixture of two parts of salt and one part each of dried sulphate of iron and sulphur. If the colt will not lick this mixture now, mix two teaspoonfuls of the powder in the feed night and morning.

ABORTION.

Have been having some trouble with my cows calving too soon and would like to ask a few questions. (1) Can heifers contract contagious abortion by running in the same pasture or yards with cows affected with it? (2) Do cows become immune after aborting a few times? (3) If they become immune will their heifer calves be immune? (4) Is there any vaccine or serum made to prevent or cure the disease? (5) What does the carbolic acid treatment consist of?

(1) Yes, but infection more commonly occurs in the stable. (2) It is generally held that they become immune after a time, but they continue to spread the infection. (3) No. (4) No vaccine has thus far been made that has proven satisfactory as a cure or preventive. (5) drams of crude carbolic acid are well diluted with water and mixed in the soft feed of each pregnant cow, starting at the end of the second month and giving it every other night during alternate fortnights until the end of the seventh month of pregnancy.

RICKETS.

Have a lot of twenty-two head of Duroc Jersey hogs of April farrow which I started to fatten about eight weeks ago. In the last two weeks four of them have become crippled so that they walk on their heels, some on their front feet and some on their hind feet and the legs bow in. Their toe nails get long and turn up. They have a pen 16x12 with a cement floor which is always kept well covered with dry bedding. They have a lot about five rods square. If food is placed before them they will eat well, but won't get up.

Your crippled hogs are affected with rickets. This is due to malnutrition and that often is associated with the presence of intestinal worms. Often, however, it is induced by the feeding of incomplete rations and allowing too little out-door exercise. Make the pigs take abundant exercise out of doors every day. Do not feed corn. Substitute a simple ration of milk, middlings, a very little corn meal and flaxseed meal and add one ounce of limewater to each quart of slop fed.

COUGH.

We have a young cow that coughs quite hard and has ever since October, at which time we purchased her. Is there anything I can give her?

Whenever a cow suffers from a chronic cough, lose no time in having her tested with tuberculin, as tuberculosis always is to be suspected in such a case. Cough is merely a symptom of irritation which may be due to any one of a large number of different causes, but until the test has been applied, we would not feel justified in prescribing treatment.

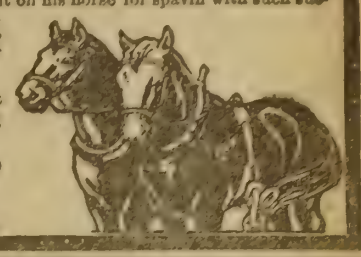
Removes Shoe Boils

Sloan's Liniment will remove shoe boils and any enlargement—kill a spavin, curb or splint. A reliable remedy for sweeny, fistula and thrush.

"Your Liniment is the best made. I have taken very large shoe boils off a horse. I cured a cow that had diarrhoea so badly she could hardly walk. I have healed a quarter-crack on a black mare, and a sore neck on three horses. I have also cured grease heel on a mare." MR. ANTHONY G. HIVER of Oakdale, Pa., R.F.D. 1, Box 47.

SLOAN'S LINIMENT

"We have a customer that used Sloan's Liniment on his horse for spavin with such success that the horse now appears as well as ever. We consider it the best remedy for curbs, splints, abscesses or any enlargement."—KEANE BROS., 601 Albany St., Boston, Mass.



Healed Fistula.

"I used Sloan's Liniment on two cases of fistula that were pronounced incurable, but I healed them with Sloan's Liniment, and the horses are at work now." E. W. BLOOD, V. S., Golden, Colo.

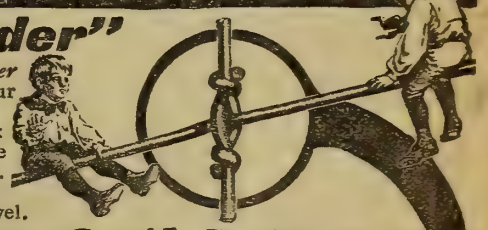
APEX FENCE
TRADE MARK

"Made to Order"



Apex Fence is just like *made-to-order* clothes. It fits every roll of your land—stands straight, tight and trim, no matter how hilly. Apex Fence *can't* buckle or strain at the joints—it *can't* sag, bag or snap. It follows hills and hollows and is even and smooth as on the level.

The Most For Every Cent! The *swinging joint alone* makes Apex Fence worth more. The upright stays clasp the line wires firmly, yet the line wires swing with the land, up or down, so the fence is always upright. It is the easiest fence to put up, and saves you time, labor and expense in building fence. Then Apex is made of genuine Open Hearth Steel and heavily and thoroughly galvanized.

Compared with these good qualities, the fences which stretch hard, break or twist the joints, or bag and need repairing soon are at best "shoddy goods." Do away with such troubles by putting up Apex Fence NOW.

Write Us Today! Read the facts we want to send you. The purchase of any fence requires too big an outlay of money to make a mistake. Read the Apex booklet—then decide. Read more about the famous "swinging joint"—more about Apex Material and Construction. We may have an Apex dealer near you—in any case if you are interested you can be supplied promptly and at the right price. Address

Water Supply for Country Homes.

THE problems of water supplies in country and village are of a somewhat different order from those of supplies in towns and cities. In the latter the various families are possessed of common water supplies and provide common sewer system under municipal control, while in country and village homes each family has to face and solve the water problem for itself and has to provide its own means of drainage. Thus the water supply question in the country largely hinges on the local conditions, but when these are carefully inquired into it will nearly always be found that purity of country water supplies is largely a problem of local, domestic and animal sanitation.

Let us look at the sources of water supply in our rural communities. We find that we depend very largely for our drinking water on the shallow or surface well spring; occasionally a lake or stream is the source of supply. Rain water is much employed for general cleansing purposes, but is seldom a source of drinking supply, though when collected properly and well stored it is a good, safe water, though rather unpalatable to those accustomed to our hard waters.

Considering first the surface or shallow well as to its sources of supply, character of its water and the means by which matters of dangerous character may gain entry. By a surface well is meant one which depends for its supply on the rain and melted snow waters which are absorbed by the soil and which seep down into the subsoil till held by the first impermeable stratum of rock or hardpan. Along this stratum the water oozes gradually or may even flow in small streams, flowing usually in the direction of the general dip or fall of the country. While these wells are called surface or shallow wells, such wells may, so far as actual depth is concerned, vary from four to five up to several hundred feet, all depending on depth of water retaining stratum. If this impermeable stratum makes its way to surface by a fall in the ground (gradually or abruptly) then such water flows out on surface to form a surface spring, or form a marshy spot. The source of supply here, then, is the ground water, which rises and falls with the amount of rainfall, the porosity of the soil and the dip of the ground at the point at which water-bearing layer is tapped. Such a well practically constitutes a drainage basin for the ground or subsoil of its neighborhood as distinct from the surface run-off water. The rain, in soaking into the soil from the surface, naturally carries with it in solution and suspension considerable soluble material from the air and soil, and many minute particles. Most of the particles become gradually filtered out in its passage and the dissolved matters much altered and purified as the soil has marked purifying properties, especially if not over-worked, when it becomes "soured or choked" and unable to effect purification. The general character of the water in a surface well depends on many factors, such as character of the soil, whether sand, clay, gravel, rock, etc.; the amount of protection of well openings; the amount of water used, etc., but from the health viewpoint much more depends upon the character of soil in the drainage area of such wells as regards the presence of human or animal wastes, vegetable or plant decomposing material, or of deleterious mineral substances, these being stated in order of their importance. Practically the only effects produced by ordinary mineral, or vegetable matter (undergoing decomposition) are to induce such gastro-intestinal disturbance with diarrhoea, but with the entry of animal waste, and especially human excretions, there is added the danger of production of special diseases like typhoid fever, acute dysentery, cholera, etc., because the germs of these diseases are given off in the excreta, hence if gaining entry to water can be carried to others. If the human or animal wastes carried thus into water do not contain these special germs, then nothing more serious will be produced by such material than by presence of equal amounts of decomposing vegetable matter. Thus in my work I have often been told when condemning a well as containing human or animal wastes that the well was in use before I was born, that no illness had ever been traced to the water and hence there was no valid reason for condemning the well and stopping use of the water. I can only say that such people have been lucky for once there is human waste gaining entry there is the possibility of introduction of the special disease-producing germs.

Now in all works on sanitation classifying sources of water supply as to disease carrying possibilities, the surface well is classed as potentially dangerous. Why is this? Surface well water may be water as good and safe as any other natural water. When our country was younger such waters were reasonably safe, but with longer settlement and a poor or indifferent idea of house sanitation we have allowed the drainage area of many of our wells to become polluted from human or animal waste, or have been so indifferent in protection of the well opening as to allow such pollution to gain entry directly through the well mouth.

During the past few years I have had an opportunity of examination and analysis of nearly 1,000 farm, village and cheese factory water supplies and I find that on an average two-thirds of these supplies show more or less pollution with animal or human waste material—sure a very poor record. Critics may say, and to a certain extent the criticism has weight, that I only have had the suspicious wells called to my attention. Still, in several systematic investigations of the well water of certain villages, and of cheese factory waters of certain districts, the two-third ratio of polluted samples holds good, in fact, in some cases, the pollution reaches a higher figure. Thus, in a very recent examination in one small village with fourteen well waters, but three were found not polluted, i. e., nearly 80 per cent were infected with bacteria of human or animal excreta.

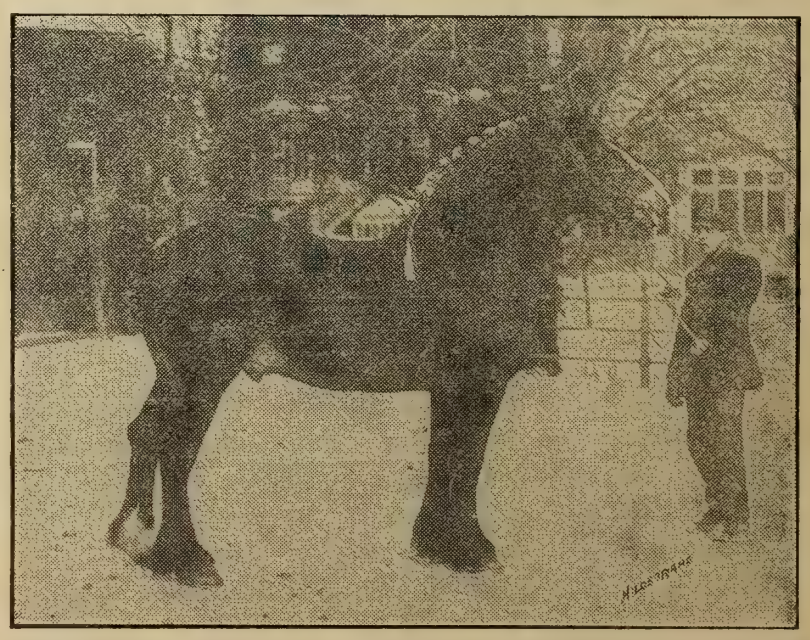
Now, what are the sanitary faults one finds leading to such a percentage of polluted wells? These I will now point out, but not in order of frequency nor importance.

(a) Mouth of wells not elevated above surrounding soil, in fact in some cases actually lying lower. The result is this, that the surface run-off water makes its way directly into well, carrying with it any waste substances present on soil surface.

(b) Wells not properly curbed or protected for upper four or five feet. The result is practically the same as when mouth of well is not elevated, for if the upper four or five feet are not made water tight the well is an excellent drainage pit for surrounding surface water, and if soil happens to become contaminated, such contaminated material must make its way into well with its worms, insects and small animals.

(c) Well mouth not properly covered so that dust and surface dirt, twigs, leaves, etc., can fall into the well; or water pumped up carelessly runs back in again, carrying such substances in. Through lack of covering or improper curbing frogs, mice, and even larger animals gain entry and contaminate the water. The drips from pumps should always be carried outside the well curbing.

(d) Lack of cleanliness of surface



Galbraith's Royal Voucher, the grand champion of all British breeds at the Denver Live Stock Show. He is unusually well bred. He is a son of Baron's Voucher, that was a champion in this country, and a son of that incomparable sire, Baron's Pride, whose record as a sire of prize winners was never surpassed by any other draft stallion. Of this splendid stallion it has been said, "There is no better bred Clydesdale sire living." The Galbraiths (De Kalb, Ill.) are offering Royal Voucher and a number of others of equal excellence for sale.

Stockraisers! Another 10,000 lbs. FREE—by Parcel Post!

I've Extended This Remarkable Offer!

So great was the demand, I simply had to! But this may be your last chance to get free—*absolutely free*—10 lbs. of this wonderful conditioner. Write for your 10 lbs. today. Needn't *buy*—just *try*—

Ringmaster Stock Tonic

For All Kinds of Stock. A Conditioner, Blood Purifier and Worm Exterminator of Unusual Merit. Saves Hogs from Cholera and is a Preventive of *All* Animal Diseases

I don't care what experience you've had with other conditioners. I tell you as man to man that here is ONE PRODUCT so far AHEAD of anything else now on the market that there's utterly *no comparison*.

And to PROVE it, I will send you 10 pounds without charging you a penny. I don't *ask* you to buy it. I don't ask you to buy any more *like* it. I *merely* ask that you place it before your wormiest, runtiest, skinniest hogs, sheep or cattle, or before animals you think in the pink of condition!

soil in neighborhood of well, e. g., such things as throwing slop water near the well, allowing accumulation of manure or house wastes nearby. It is remarkable how careless many are in these points and also such as watering animals right over or very near well mouth and allowing their droppings to lie about.

(e) Wells may be situated too near to drains or privies that leak owing to improper construction, or too near stables, manure piles or pig pens, so that the soakage from these, gradually seeping through soil, makes its way into well and thus contaminates the water.

A deep well is one which does not depend for its supply on the ground water of the immediate locality of the well, but gets its supply from the water which lies imprisoned beneath one or more of the surface impermeable strata. The origin of these waters may be only several hundred feet or yards from the source at which tapped, or it may come from miles away, and always from higher ground than at the point at which tapped. If there be a heavy flow of water and source be considerably above the ground level at site of well, then a flowing or artesian well may result. Deep well waters then, as a rule, are good waters, yet in my examination and analysis I find I have to condemn a fair number of samples from such wells. What is the trouble? Practically the same as in surface wells, i. e., lack of protection of the well itself so that contaminated ground water enters. What is the use of deepening or drilling a well if the drill hole is to be simply a drainage pit for surface water. Such a well ought to be tightly curbed down to first impermeable stratum of rock or hard pan. This keeps out the upper ground and surface water and insures the drawing of the deeper water. In the vast majority of the cases which I have investigated where contamination has occurred the trouble has been due to entrance of surface run of water or the surface well water and by taking such steps as were necessary to keep this out the trouble has ceased.—[Dr. W. T. Connell in Ontario Report.

RAISING CARRIER PIGEONS FOR RACING PURPOSES.

The scientific breeding of carrier pigeons in France received a great impulse from their practical utility during the siege of Paris, and this industry has since been followed with much interest. While the siege was in progress 363 carriers were sent out in balloons, of which 302 were liberated and seventy-three returned safely. They bore messages photographed miscroscopically on pallicles of collodion which were inclosed in goose quills attached to a silk thread to the upper part of the tail feathers. The success of these experiments led to the organization in France of a military pigeon system. The ministry of war maintains control over all the carrier pigeons in the country.

Colombophile societies exist everywhere in the republic and their activities are under the control of the military authorities. French amateurs, however, concede that it is in Belgium that the greatest measure of success in developing the best types of homing or carrier pigeons has been attained. Four varieties of pigeon still exist in a wild state in France—the biset, the wood pigeon, the rock pigeon, and the turtle dove. The biset variety is the foundation of all the domesticated varieties in France. The modern carrier pigeon is a composite of several varieties, chiefly the biset and the Belgian "voyageur." The prevailing type is large with long body, head, neck and beak. The female carrier pigeon invariably lays two eggs at a time, from which are nearly always hatched a male and a female. The period of incubation lasts eighteen or nineteen days, and both parent birds share in the process of incubation and in feeding the young.

Careful attention is given to the feeding of birds destined for racers. Their usual diet is wheat, but as a contest approaches they are fed on small dried beans and maize and are given water containing iron. Just before a race some amateurs give their birds beechnuts and buck wheat, which are believed to impart special strength for the flight.

The trainer of the young birds begins when they are three or four months old. They are placed in a basket, taken a mile or so from home, and liberated. A few days later they are again transported, usually in the same direction, but twice as far, and so on in successively longer stages until they are able to fly homeward 100 miles or more. At the age of five months they can fly 300 or 350 miles in ten hours. They are not at their best, however, until the age of four or five years, when they can easily cover 600 or 700 miles.

The average velocity of a good carrier is twenty-seven to thirty miles an hour, although an instance is on record where a bird attained a speed of seventy-five miles an hour. The average height in flying is 450 to 500 feet. The price of a carrier at Havre varies from $3.80 for an ordinary subject to $250 or even more for a prize winner in a race.—[Chicago Tribune.

KEEPS DOWN OPERATING COST

INGECO FARM ENGINES keep down fuel cost. At the high price of gasoline that is a big item. A poor engine will eat its head off. A good engine will save its original cost in a short time. **INGECO ENGINES are great fuel savers.**

The smooth running INGECO ENGINE with its large bearings and accurately fitted parts will run for years after other engines have gone to the scrap heap—yet they cost no more.

Made in 1¼, 2½, 4, 6, 8, 10 and up to 60 h. p.—Stationary and Portable types.

Write for catalog and particulars about "INGECO" ENGINES. Let us tell you how to pick out an engine suited to your needs.

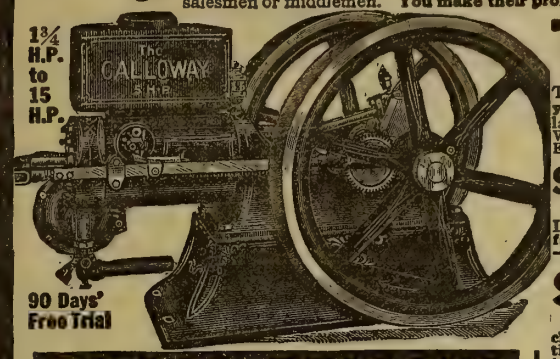
INTERNATIONAL GAS ENGINE CO.
152 Holthoff Pl., Cudahy, Wis. (Suburb of Milwaukee)

"INGECO" ENGINES

Take My New Engine —Use It 90 Days FREE!

Take one of the wonderful new 1913 Model Galloway Gasoline Engines —use it right on your own farm for one month, two months or three months **absolutely free.** Write at once for my 1913 catalog—pick out the size and style engine you want me to ship you on this free offer—I'll ship it immediately Put it to work on your farm the day you get it. Keep it working every day. Watch it carefully Compare it with any and every engine on the market that you can get a line on *no matter what the price.* If anybody else is trying to sell you an engine, tell them to make you the same offer that Galloway does. Tell them Galloway is willing to put his engine right side by side on your farm with any other engine in the world *and let you be the judge.* Tell them you don t want any engine salesman trying to influence your judgment—*you're buying engines not conversation.* Don't listen to a man who isn't willing to let you judge his engine on its merits. The man who is afraid to meet me on that kind of a proposition *is no man for you to do business with.* Keep my engine a whole month or even two months or three months if you want to. Then if you believe that there is a better engine than the Galloway anywhere in the world at any price, tell me so and I'll take it back and *I'll pay all the freight charges both ways, so that you won't be out one single cent for anything.* If you do decide to keep the Galloway, just tell me so and I'll give you the benefit of the biggest and most liberal engine offer ever made.

I'll Save You $50 to $300 Sure! I'll make you an actual present of $50 to $300. I'll positively guarantee to save you at least that much in the first cost alone. I'll sell you a Galloway direct from my factory where it is made. **You pay me just what it costs to make** it plus one very small profit—**that's all!** There are no jobbers, wholesalers, retailers, salesmen or middlemen. **You make their profits yourself when you buy a Galloway.**



The Only Way Is the Galloway

That's the way to buy an engine, **and it's the only way that's absolutely fair to you,** and that's the only way that I'll sell an engine, because I won't keep a dollar of any man's money **unless he would rather have my engine than the cash.** When a man will tell me that—then and not until then do I consider a sale as made. Every single man who does business with me is absolutely protected by my

$5,000 Challenge—$25,000 Guarantee

I back every promise, every statement and every claim with $5,000 **in cash.** I protect every one of my customers by a $25,000 guarantee of **absolute satisfaction.** Understand, I don't say reasonable satisfaction but **ABSOLUTE** satisfaction **—AND YOUR WORD is always good with me.**

Special Service Bureau FREE

My force of high salaried Engine Experts are at your command absolutely without charge. They will tell you how to select exactly the engine which is best suited for your particular purposes; how to test and judge an engine; how to use one to best advantage; how to fit up a power house—besides answering fully and completely any question about the care and operation of an engine. This is absolutely free to you whether you buy a Galloway or not.

20,000 REASONS

Here are a few expressions from farmers now using Galloway Engines. Twenty thousand others have had exactly the same experiences. These are men just like yourself. **Before they bought a Galloway they were in exactly the same position as you are now.** You will say exactly the same as they do after you get your Galloway.

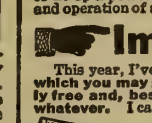
Alex. McLachlan, Argyle, Mich. I received my Galloway Engine last week and it is all right. Everybody says it is a dandy engine. **Some of my neighbors got bit on other engines** by paying $400 for a 9 h. p. and $460 for a 10 h. p. I like your engine dandy.

Fred Ruthardt, Mt. Vernon, S. D. I must say the engine is all right. **I saved about one hundred dollars in** buying from you. I don't want to be without the engine, not at all. I use it for shelling corn and grinding feed.

Frank Peck, Dorchester, Neb. My Galloway Gasoline Engine does lots of work for me. It shells corn, saws wood and grinds feed. I have no trouble with it. It is simple and easy to start. **My twelve-year-old boy starts it easily.**

Important! Get My 1913 Proposition

This year, I've got something better to offer than I ever had before. **I've got a plan by which you may get your Galloway Engine either wholly or partly free and, besides, without any soliciting or canvassing, whatever.** I can't explain it now, but I tell you all about it in a personal letter when you write me.



Engine Book FREE

Now, don't wait a minute. Get my Engine Book and my special 1913 offer right away. You won't be under any obligations at all—I just want you to fill out the coupon or mail me a postal or letter, that's absolutely all I ask. If you haven't got a pen or pencil handy, go and get one and write me right away.

(155) *Engines Carried in Stock at Chicago, Kansas City, Council Bluffs, Minneapolis and Winnipeg.*

Farrowing house and sale pavilion, Blue Ribbon Stock Farm, property of John Truax & Son, Sycamore, Ohio, who will hold their Duroc sow sale on Monday, March 3, 1913.

Charcoal is a pressing essential for poultry, especially at this season. Instead of buying it, rake up some old chunks of wood, cobs and other refuse about the place, setting fire to them. When the heap turns to a mass of hot coals, smother it down with a little water or dirt, and when it cools, you will have a handy supply of charcoal and be rid of the rubbish.

The renter's moving day and the day when the hired man begins his season of labors will soon be here. The first day of March is the beginning of a new deal with many, every year.

NORTHFIELD WELL CURB

Lasts a lifetime. Most economical. Made to fit any well. Works perfectly in quicksand or any soil. Anyone can install it. Write direct to factory for catalog and prices. Address Northfield Iron Co., 118 Water St., Northfield, Minnesota

Feeding Draft Colts.

By Wm. Crownover.

I DO NOT intend to give you any special method that might be given to some special colt fitted for some special show. I know that the average farmer does not care for that and would not do it if I told him how, and as I can say a few things that I feel ought to be said in regard to breeding and management without interfering with some one else's subject I don't think I will stick entirely to my text. I just want to give a little practical common-sense talk. If I can impress upon you the importance of giving the colts plenty of the feed every day that is in sight in the oats bin and hay mow I and the colts both will be pleased that you have been here.

I heard Mr. John Cownie in one of his lectures say that the best cross he could give a hog was the corn crib. It may be as truly said of the colts that the best cross they can have is the oats bin. I am sorry to see so many farmers who seem to think that as soon as the foals are taken off the mothers that they are able to take care of themselves, and will say, "Well go and hunt up what you can find to eat now and make a horse." Very frequently colts are worth more when taken off the mother than they are as yearlings when improperly fed. If we do not feed the colts well the first year and make good yearlings we are sure to lose one-fourth to one-half the value at maturity. Show me a good feeder and I will show you a good breeder, and a man will pay $25 service fee for a good stallion. Show me a man that thinks his grain of more value in the elevator than in his stock and I will show you a man that will use a $6 scrub. Show me a good bred horse and a poor fed one and I will show you a poor horse. Show me a poor bred one and a good fed one and I will show you a fair horse. Show me a good bred one and a good fed one and I will show you a market topper.

Too much cannot be said in this crusade against scrub sires. From what I have seen I believe that a lot of farmers ought to have a guardian when it comes to live stock breeding. They seem to think that a few dollars saved in the breeding end of the transaction is money made. They seem to lose sight of the selling end where the values are at least 50 to 100 per cent more from good pure-bred sires than from scrubs. I call such methods five cents wise and $5 foolish. What man is there contemplating building a skyscraper that does not give due consideration to the foundation and the material entered in the construction? It is just as important to have the best of feet, pasterns and joints with a heavy flat clean hard flinty bone in the horse and when you get such a foundation you can build on the top just as large as you like.

I am sorry to see farmers neglecting the feed and fit their horses for market. They feed their beef and dairy cattle, their hogs and sheep that they may receive top prices, but the horse is sold neglected and thin, his hair standing up and rough as it can be.

WILLIAM CROWNOVER.

Now there is no animal will pay better to feed and fit for market than the horse and the farmers of the corn belt are losing $100 to $150 on every horse so neglected. There are just two things that are sure to bring success or failure in draft horse breeding, namely, breeding and feeding. The one is just as important as the other. Either one of them properly handled and the other neglected means failure.

Then how and when shall we begin to feed these colts? I worked for a man one time who raised his horses as scavengers and on the first of March as the colts were nearing three years old he said boys you had better get those colts in the barn and feed them a little corn and break them to hitch as we will have to work them this spring. How improper is such management. How many do nearly the same thing. But I am thankful that we are advancing from such methods. Instead of waiting until the colt is nearing maturity before we begin to feed let us begin at the proper time. Say eleven months before it is born, give this good mother who is expected often to do her day's work in the field and nourish her own life, the life of her baby foal, and the life of the unborn making in all three lives to nourish, give her some good healthy feed. Do not neglect her, give her plenty of bone, muscle and milk-producing food, such as oats, bran, alfalfa meal, some nice clover hay, raise a small patch of sugar cane for winter feed, for they enjoy it, so much. There is no better or cheaper feed you can raise than the cane. A good piece of land will produce five to ten tons per acre and there is not a pound of waste, they will eat every stalk clean and the larger the stalk the better they like it.

In the winter time turn the prospective mother out in the fields every day for exercise, she needs it and enjoys it in any weather except a cold rain or sleet storm. Don't expect her to break the roads through the snow banks, nor do the heavy hauling on the muddy springtime roads. If you do you are sure to have some fatalities. I keep a pair of heavy geldings on the farm for no other purpose than to toke the hard places off from the brood mares and I nave found it very profitable. Give her box stall intended for foaling at least a month before she is due. This allows her to get accustomed to the change in temperature that sometimes exists between the farm stable and the box used for foaling mares. There is often great risk of both mother and offspring taking a cold when the mare is kept in a warm stable up to foaling and then turned into a drafty box stall where it is much colder. Foals will usually stand as much exposure as the mare has been accustomed to. For instance, a foal from a mare that has been wintered outside will bear an amount of exposure that would soon kill one from a mare that has been accustomed to a warm stable.

After the mare has foaled it is best to leave her and the foal to themselves. If the foal is strong he will get on his legs and nurse without help. Too much interference often makes the mare restless and prevents her from letting the foal nurse. Foals during the first few days require a good deal of attention. One great evil is when foals get costive, and deranged internally this may be avoided in a great measure by a laxative food, such as a warm bran mash which will have the effect of keeping the foal laxative also. But where mares can get green fresh grass or have been fed laxative food little doctoring is required. More harm than good is often done by treating the foals. It is best to treat the mare and not the offspring. It scmetimes happens that the flow of milk is greater than the foal can take, in such cases it is well to draw from the udder two or three times a day until the foal is able to take care of it all. If it is allowed to remain in the udder it becomes unwholesome and liable to derange the foal internally. But as soon as the foal is well under way and able to take all the milk the mare gives, means should be taken to increase the quantity as well as the quality of the milk. Oats with bran or alfalfa meal and other green feeds will produce the desired result. If the weather is warm in April and the fore part of May turn the mare out on grass after the cold dew is off and the sun is shining. Young animals derive great strength and benefit from sunshine. Of course, in the extreme heat of the last days of June and July this treatment must be reversed and keep the very young foal in from the extreme heat of the day. Pardon me for saying so much about colt management and feeding in early stages, but I have learned from experience that the most critical period in all the colt's life that the feeder has to contend with in rearing the colt is from birth to four weeks old.

Mares should have at least fourteen days rest from work after foaling and if farm operations will admit, longer. When the mares are put to work they should be used only a few hours at first, and the time gradually increased. Anyone who has watched a mare and foal will know what a great number of times the latter will nurse in an hour. It is, therefore, very unreasonable to take a mare away from a very young foal and work her a half a day without allowing it to nurse. When it gets older and can take some nourishment it is different. I do not work my

mares after foaling if I can possibly avoid it, for I know the mare that is being worked cannot possibly have the amount of nutrition to spare for the foal that she would have if idle. If a mare gets heated when at work she should not be allowed to nurse the foal until she has cooled down, and has some of the surplus milk that has remained too long in the udder to be good for the foal drawn from her. This is the general cause for scours which sets the colt back and is fatal if it becomes of a chronic nature.

To raise horses successfully and profitably they should be constantly kept improving. The raising of young stock may be compared to the progression of a railway train. We all know what a tedious thing it is to travel a long journey by rail when the stops are numerous and we grumble at the time wasted. It is not only the length of time the train stops, but the time it takes before it can be got properly on to speed again. The same way with the colt, if by neglecting to supply suitable food or by mismanagement you allow the animal to come to a standstill in its growth and condition it will very often take a couple of months good feeding before any apparent improvement in condition is made. This is a serious loss of time and food which means a pecuniary loss to the owner, whereas if sufficient food is supplied to keep the colt constantly improving you will weighing close to 1,200 pounds and better, and you are now well on the way to make a good draft horse. When the yearlings go on grass give them a ration of three or four quarts of oats twice a day, and when the heat and flies are bad increase the ration a couple of quarts a day, and when winter comes again duplicate the ration you used before, only increase as the case may require. You can with good results at this time increase the corn and alfalfa and cut down some on the oats. The alfalfa will balance the corn. Try alfalfa meal mixed with 40 per cent molasses. It is the best appetizer, conditioner, laxative and bone and muscle builder with other grains there is. It is cheaper than bran and of far more value as a horse feed. There is no fixed rule as to the number of pounds of grain or hay that will apply to every horse or colt. The feeder must use judgment as not every horse feeds alike and does not require the same mixed ration. For instance, if I had a big, rough, raw-boned colt I would feed a heavy ration of corn and get a top on as soon as possible. It is wonderful how the digestive organs of the horse can be developed by proper and gradual feeding, and there is no animal that will make more gain for the grain consumed than the horse. It is common for a good feeder to put on from six to twelve pounds a day, and good horse flesh is selling

The above illustration is a good likeness of Messenger Boy, the undefeated grand champion Hampshire boar of 1911 and 1912. He is owned by Clayton Messenger, Keswick, Iowa.

have a good return for the quantity consumed. To keep colts constantly improving must be the result constantly aimed at.

The best means to secure this improvement must next be considered. Size, bone and muscle are the three things necessary for a draft horse to possess. They can only be obtained by proper breeding and feeding of food suited for their conformation and by exercise. Generally when the colts are three weeks old they will begin to nibble oats or bran. Encourage them by having a few nice sweet crushed oats in your pocket and when you go into the stall or pasture scratch them on the back with one hand and let them eat the oats out of the other. It will only be a short time until they will be looking for you. I want to say that kindness is one of the best foods that can be mixed with the rations. A sulky groom that is always kicking the animal out of his way is not fit to feed anything and must not be tolerated. Provide a little box in the stall or pasture and when you feed the mother don't forget to have a little pan for the foals. I would not advise buying alfalfa meal or bran for a ration when the mares and colts are on good pasture. They do very well on oats alone. Before weaning time mix a little alfalfa with their oats and get them started on full feed. Then when they are taken off the mother they will go on and grow and keep their flesh.

In the winter time give them plenty of clover hay, if you can get it, or cane. Keep up the ration of oats and alfalfa meal and a small amount of corn will do good. Let them out every day for they must have exercise to develop their feet and muscles. They will roll in the snow banks and enjoy it. The next spring you will have colts at twelve months old from twelve to twenty-four cents per pound on the open market and a few extra individuals much higher.

Should we not then pay more attention to the proper feeding of our horses and send them to market as a finished product? We can raise here in Iowa all the necessary feed and can develop as good a horse as any country in the world can produce, and there is no one can finish them for market cheaper than the farmer. Then why continue sending our big colts and our feed all raised on our farms down to the eastern feeders to be finished by them at a good profit and go on the eastern market to be sold as a product of their state? We have all the raw materials so let us send it to market in a finished form and have it stamped "Made in Iowa."—(Before Iowa Draft Horse Breeders' Association.)

CENTRAL SHORT-HORN BREEDERS' MEETING.

At the annual meeting of the Central Short-horn Breeders' Association held at Kansas City last week, Mr. N. H. Gentry, of Sedalia, Mo., was elected president and E. H. Hall, of Carthage, Mo., secretary and treasurer. A resolution was unanimously adopted tendering to Mr. B. O. Cowan the respects of the association and expressing regret that he could no longer act in the capacity of its secretary, a position he has held from the time of its origination some fifteen years ago.

The breeders present were enthusiastic over the plan of holding annual bull sales and enough bulls were pledged to insure the holding of one in the not far distant future. Those in attendance were enthusiastic over the rapid increase in the popularity of Short-horn cattle.

There's a Certain-teed Roofing for every building on your farm — large or small

There is a simple method of applying *Certain-teed* Ready-to-lay Roofing on all kinds of buildings—farm houses, barns, garages, poultry houses, silos.

It comes in rolls, also red, green and slate gray shingles.

Certain-teed

(Quality *Cert-ified*—Durability *Guaran-teed*)

Roofing in Rolls and Shingles

Cold weather cracks tile, rains wash and rot shingles, wash gravel off, and the sun melts tar. *Certain-teed* Roofing contains no tar or paper, it will not crack, warp or blow off, it is weather-proof and we guarantee it to wear fifteen years—*costs less* and is *easy to lay.*

Look for the *Certain-teed* label of quality—your dealer can save you money.

Valuable Book Free You will find many valuable suggestions in our new book, "Modern Building Ideas and Plans." It tells you what to do and what not to do—it suggests economies and conveniences that will save you money.

A book of this kind would ordinarily sell for $1, but as it shows the use of our *Certain-teed* Roofing on all kinds of model homes and farm buildings, we offer it to you at 25 cents. We prefer to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy FREE. If you write us, enclose 25 cents to cover cost, postage and mailing.

FIELD NOTES.

G. W. Baskerville, Jolley, Iowa, is advertising a pure-bred Belgian stallion for sale. His advertisement appears elsewhere in this issue.

Chester White fall boars are advertised for sale by A. C. Orme, Nodaway, Iowa, elsewhere in this isue. He also offers some good gilts for sale.

P. Bischmann, Monee, Ill., has three registered Short-horn heifers on which he is quoting a price in his advertisement appearing elsewhere in this issue.

Robert Jarman, Carlinville, Ill., has two good Shire stallions and four mares which he is offering for sale in his advertisement found elsewhere in this issue. For further information and prices write Mr. Jarman.

Wm. D. Whisler, Garner, Iowa, is advertising a closing-out sale of Percheron horses on March 5th. His announcement appears elsewhere in this paper. The offering will consist of three stallions and fifteen mares. Write Mr. Whisler for further particulars.

R. E. Baldwin, Osceola, Iowa, has a number of good Short-horn cattle that he is quoting prices on in an advertisement found elsewhere in this issue. The offering will consist of young cows, heifers and bulls. They are of the Brawith Bud, Princess Royal, Alexandria and other good families. They will be priced to sell. Mr. Baldwin invites those interested to visit his herd and inspect the stock, and if that is not possible write him.

An English Shire stallion and one Missouri-bred jack are advertised for sale elsewhere in this issue by L. B. Cummings, Clearfield, Iowa.

D. W. Guthrie, Newton, Iowa, has for sale a pure-bred Guernsey bull that he has used in the herd for some time and can no longer use him to advantage. Write him for particulars, mentioning The Homestead.

George Lippert, Magnolia, Ill., in furnishing copy for his advertisement appearing elsewhere in this paper, writes: "I never saw such a hunger for bred Hampshire sows. It looks like a shortage of brood sows all over the corn belt. The recent Hampshire brood sow sales were good offerings and prices were very high."

Some choice Percheron, Belgian and English Shire stallions are advertised for sale by P. J. Eggers, Denison, Iowa, elsewhere in this issue. He also offers a splendid lot of Percheron mares for sale, some of which will weigh from 1,600 to 2,000 pounds. Write Mr. Eggers regarding these at once and kindly mention this paper.

Henry Meissner, Leighton, Ia., is advertising regenrated, Swedish select seed oats elsewhere in this issue. Mr. Meissner secured the seed from which these oats were grown from the Garton-Cooper Seed Company, who are noted as breeders and improvers of oats. Mr. Meissner is pricing these oats at a very reasonable figure and will be pleased to receive orders from Homestead readers. He has grown all the oats he has for sale and they are first class in every respect.

A Poland China boar for some time at the head of the herd of Wm. Lentz, at Ankeny, Iowa, has been a producer whose merits have cropped out in a great many directions. At the Iowa State Fair one exhibitor showed a gilt under six months whose dam was a daughter of Tecumseh Longfellow and took second place with her. He also captured ribbons in the boar classes with a litter brother. At the same fair still another exhibitor took fifth on an aged sow that was a granddaughter of Tecumseh Longfellow. All these points are of interest because Mr. Lentz will offer considerable of the same blood at a public sale which will be announced in this paper later.

D. A. Hodge's public sale of Jersey cattle will be held at his place in the city of Des Moines, Iowa, on Tuesday, February 25th. The offering includes eight mature cows, five heifers with calves, four young heifers, six pure-blood bull calves and a number of grade cows and heifers. The blood lines carried by these cattle are of the most popular imported and American strains. Many of the cattle are right close up to imported sires and dams. Mr. Hodge's cattle are good ones which he has gotten together at a great deal of expense and considerable pains. Buyers will find them to be of money-making sorts. Owing to the destruction of The Homestead's job printing plant Mr. Hodge's catalog will be seriously delayed. Descriptive circular, however, may be obtained by writing to B. A. Hodge, Route 6, Des Moines, Iowa.

Taylor & Jones, Williamsville, Ill., write: "Among our recent sales we are glad to mention the following: To Kellums & Sturdivant, Clay county, Illinois, a three-year-old imported Percheron; to A. E. Leonard, Fond du Lac county, Wisconsin, a three-year-old imported Percheron; to Schertz & Smith, Woodford county, Illinois, a three-year-old imported Percheron; to John McCarty, Douglas county, Illinois, a two-year-old imported Percheron, while G. W. Morgret, Christian county, Illinois, gets two imported Percherons. Our horses are doing fine and business is good. We have a nice lot of imported and American-bred draft stallions and mares and parties who are planning to buy such will find here just what they are looking for and we guarantee the treatment you receive at our hands will be all you can expect. Our guarantee is the most reasonable." Their advertisement appears elsewhere in this issue.

G. A. Ford, manager of the Ford Stock Farm, Parker, S. D., writes: "During the week ending the month of January we had the pleasure of selling J. M. Trecker, Salem, S. D., an imported black Percheron; John Lechner, Leola, S. D., two imported Percherons, a gray and a black; C. E. Wiley, Carthage, S. D., an imported roan Belgian; Percy Bump, Montrose, S. D., an imported black Percheron; John Reimer, Zeeland, N. D., an American-bred black Percheron; F. F. Tiesen, Freeman, S. D., an imported chestnut sorrel Belgian; Jacob Unruh, Parker, S. D., an imported dark gray Percheron, and five head to a party in Montana not yet delivered. With the exception of F. F. Tiesen, John Lechner and Jacob Unruh, who have been regular customers in the past, several of the above gentlemen spent both time and expense visiting other importers and dealers and their verdict was that they found as much bone, weight and conformation in our offerings and in many instances found them far superior. After making their choice of stallions suitable to their locality they purchased them at $100 profit to us, thereby saving from $100 to $500 dollars on each purchase of stallions weighing from 1,850 to 2,100 pounds. We invite the inspection and investigation of Homestead readers." The advertisement will be found on another page.

Public Sale of Percherons.

V. D. Wolcott, Battle Creek, Iowa, announces a public sale of registered Percheron and French draft horses on Friday, March 7th. Twelve head of horses will be included in this sale. Two of them are big, heavy-weight imported Percheron stallions, six and seven years old, as good as can be found. The remainder are mares, fillies and stallion colts. These horses are sold because of illness of the owner. There will not be a catalog of the sale, but registry certificates will be furnished with each animal sold. For other information write to V. D. Wolcott, Battle Creek, Iowa.

French's Imported Horses.

R. F. French, Independence, Iowa, has a high-class lot of imported Belgian stallions and mares that he is pricing right to Homestead readers. Mr. French personally selected these horses in Belgium last year and his judgment came into good play in getting together a good, heavy-boned, clean lot of stallions and mares. If interested write him, mentioning The Homestead. See his advertisement elsewhere in this paper.

Pfander & Son's Last Call.

The forty head of big-type Poland China sows to be sold by J. W. Pfander & Son, at Clarinda, Iowa, on Ferbuary 26th, are unquestionably the largest sows of this breed that will be sold this winter. In previous issues we have told you all about their offering. Now we wish to urge you to go to their sale. M. T. White will represent this paper at the sale and will care for any bids sent to him, in care of J. W. Pfander & Sons.

The Malvern Horse Sale.

On Saturday, March 8th, at Malvern, Iowa, will occur the second annual public sale of registered Percheron and Shire stallions and mares made under the management of Fred Durbin, and it promises to be one of the best sales to be made this spring. There will be twenty head of registered stallions and mares in this sale, one pedigreed black Mammoth jack and forty head of high-class, good draft mares, geldings, fillies and colts.

C. C. Evans' Chester White Dispersion.

C. C. Evans, the well-known live stock auctioneer and breeder of Chester Whites, North English, Iowa, has sold his farm and will close out his herd of Chester Whites at public auction on February 28th. This offering includes all of his tried brood sows that have made him hundreds of dollars during the past few years. Those who have attended Mr. Evans' sales know what a grand lot of pigs these sows have been producing each year. It is a chance of a lifetime to get some of the seed stock that has made Mr. Evans' sales a well-known event to breeders needing herd boars and breeding stock. Sows by the champions, Joker and Triumph, as well as daughters of New Hampton King 2d, O. K. Chief Noximal, Joy's Chief, Inspector O. K. and Triumph 2d will be sold. If interested write for catalog, mentioning The Homestead. See advertisement elsewhere in this issu.

The J. O. Duncan Duroc Sale.

On February 27, 1913, J. O. Duncan, Lebanon, Ky., will offer a most select lot of Durocs, including bred sows and gilts and fall pigs, both male and female. The sows are sired by Ohio Chief, Defender, Orion Chief, B. & C.'s Col., Ky. Col., Tippy Col., Garnett Chief, Col. King, Masterpiece, Pal's Col. and others. They are bred to Defender, Superba, Professor Good and others. But we wish to call particular attention to the fall pigs. They are large, growthy and extra good in quality. They are by Defender, dam by Ohio Chief, and others by Superba, dam by Tippy Col. There are sure show prospects and herd headers among them. E. S. Mayes and McKee Bros. sell the day following just nine miles away at Springfield, Ky. Make both sales. H. E. Browning will represent The Homestead. Colonels Igleheart and Wheeler, auctioneers. For catalog and further information address J. O. Duncan, Lebanon, Ky.

The Dannen-Lowrey Percheron Sale.

R. C. Dannen, Marshalltown, Iowa, and H. C. Lowrey, Nevada, Iowa, will join forces in holding a Percheron sale at Marshalltown on March 6th. The offering includes some of the good show stallions and mares that were exhibited at four state fairs in 1912 and many of them were winners. The horses are young, sound and nearly all imported. Pedigrees of the imported horses have been inspected and passed on by the French and American governments, so buyers are taking no chance along this line. Thirty-eight of the fifty head are mares and all old enough are bred to the best of imported stallions. With one exception the stallions are all imported and were selected with care as to heave, clean bone and draft quality. The sale will be held in Harmon's sale barn. A catalog can be had by addressing either consigner as per their advertisement in this issue of The Homestead. When writing for catalog kindly mention this paper.

Swallow's Dispersion.

Breeders of Poland China hogs everywhere will be interested in the announcement that W. Z. Swalow, pioneer Iowa Poland China man, will close out his entire herd at public sale on Thursday, March 6th. Fifty head will go in this sale. First in importance will be the herd boar, A Wonder 186341, two years old in March, a first-prize winner at the Minnesota State Fair and a descendant of prize winners on both sides. On his dam's side he traces to Peter Mouw's Chief Price and to the Orange Maid family of sows. This animal has proven himself a good breeder and is worthy of consideration by those who are acquainted with the best blood lines. Two younger boars will go. One of these, a coming yearling, is by Big Look and his dam traces to animals of great size. The other, also a coming March yearling, is strong in strains of blood that have produced growthiness, feeding qualities and finish. The older brood sows are highly attractive, none of them more than three years old and all of known producing character. Three of them are by Adviser and are of the same litter, their dam having been a Harvey Johnson-bred sow, a granddaughter of old Chief Tecumseh 3d. Others are by T. R.'s Perfection and Big Tecumseh. Throughout the entire lot there runs the blood of Chief Tecumseh 3d, which has been so effective in producing the size now so greatly in demand among Poland China breeders. The younger sows are by A Wonder. The older ones will have been bred by A Wonder and the younger ones to Look's Best. For additional information write to W. Z. Swallow, Waukee, Iowa.

The Trotter Jack and Jennet Sale.

On February 27th, at Mr. Ayr, Iowa, W. T. Trotter will make a public sale of thirty head of jacks and jennets and any of our readers who may be on the market for a good jack will find what they want in this sale. Mr. Trotter is one of the best breeders today in the West and he is selling some of the best jacks in this sale that will be offered at public auction this winter. He is also selling a high-class lot of jennets. Make it a point to be at this sale at Mr. Ayr, Iowa, on February 27th.

Truax & Son's Duroc Sow Sale.

These gentlemen will hold their first sale at the farm near Sycamore, Ohio, on March 3, 1913. They have erected a new hog house and sale pavilion and everyone will be made comfortable. All the passenger trains will stop at the farm to take on and let off pasengers for the sale. Don't that show that these two gentlemen are live wires? But wait until you see the catalog. We challenge anyone to say but what the blood lines are the very best up to date known to the Duroc herd registers. As to the quality, H. E. Browning, our representative, who looked over the herd a few days ago, says he saw some of the best Durocs he has seen anywhere right on Truax & Son's farm. Now this is about the last sale of the season and Duroc men should have pride enough in their favorite breed to make it a hummer. Those who cannot attend should send bids by mail or wire to H. E. Browning, in care of John Truax & Son, Sycamore, Ohio. Write for catalog, mentioning The Homestead.

The Holst Chester White Sale.

On February 27th, at Denison, Iowa, John F. Holst, Jr., will make his second annual sale of Chester Whites and he has cataloged forty head for this sale. Mr. Holst has been an advertiser of The Homestead for the past two or three years and he has built up a nice business by square dealing, and we take pleasure in calling attention to his sale. He is not only selling a splendid lot of sows in his sale, but you can depend on it that they are just as he represents them. The nineteen head of yearlings that he is selling are all sired by Fancy Boy, a boar that he purchased a couple of years ago from Louis Reese, and he has proven himself a most excellent sire. He still has him in the herd and some of the sows that go into the sale are bred to him. He has been using good boars in the herd and has a lot of the blood of old Combination as well as other noted boars. If you want Chester White bred sows don't overlook the John Holst sale. C. C. Carlin will represent The Homestead at the sale.

The Mayes, Jr.-McKee Bros. Greatest Defender Duroc Sow Sale.

E. S. Mayes, Jr., has sold Defender to McKee Bros. for a world's record price. Some twenty head of high-class sows go in this sale bred to Defender, the greatest boar in America today. The sale will be held at Springfield, Ky., Friday, February 28th, the day following the J. O. Duncan Duroc sale at Lebanon, Ky. The features of these sales are Defender, owned by McKee Bros., and Superba, owned by Mr. Mayes and Mr. Duncan. The auctioneers will be Colonels Igleheart and Wheeler. H. E. Browning will represent The Homestead. Good Durocs should have been first and good time and profitable place to go second, but the above names indicate all the best. Better make arrangements to attend these sales. You will be entertained at the Hotel Vaughn, Lebanon, Ky. Say, isn't that just about a first-class line-up of head lines for two days in the "Blue Grass" state? Bids sent H. E. Browning will be handled to your interest. For catalog write E. S. Mayes, Jr., Springfield, Ky., or McKee Bros., Versailles, Ky.

McCray's Hereford Sale.

We want to again direct the attention of our readers to the great sale of Hereford cattle to be made at Kentland, Ind., Wednesday of next week, February 26th, by Warren T. McCray. Seventy-six head are listed, twenty-five bulls and fifty-one cows and heifers, and, as we have before stated, it is without question as strong a lot of cattle as any breeder ever sent forward to a draft sale, numbers considered. Fifteen sons and grandsons of Perfection Fairfax, the greatest Hereford sire of modern times, are cataloged, forming one of the strongest lots of herd-leading material ever presented in a sale ring. In addition, several daughters of this great bull are in the sale and there are several with calves at foot or bred to him, while all the balance of breeding age are bred to sons of Perfection Fairfax. It would seem that no further comment is needed as to the value of the offering. In this sale are show cattle of all ages, the kind that can win in the fastest company. There are breeding cattle that will make money for the farmer on any land in the corn belt and there are bulls for the breeder and for the ranchman that are as good as the breed affords. Mr. McCray is a breeder in the broadest sense of the word and the present offering is, with a very few exceptions, the surplus of the fine herd that he maintains at Orchard Lake Farm. Manager James McHendry, than whom there is no better practical cattleman, will put the cattle in the sale ring in a most satisfactory condition. Not a bit overdone, but in bloom and strong breeding condition, and back of every animal stands the guarantee of Mr. McCray, which is gilt edged in every respect. In this day of great cattle shortage with tremendously increasing demand, it would certainly seem that the enterprise of Mr. McCray in offering to the public so high class a lot of cattle should meet with ready and liberal response. It will be the event of the year in Hereford circles and those of our readers interested

in the white faces cannot afford to overlook it. Remember the date, Wednesday of next week, February 26th, at Kentland, Ind. If you have not yet received a copy of the handsomely illustrated catalog send for one at once to W. T. McCray, Kentland, Ind.

Luckhardt's Percheron Dispersion.

On Wednesday, March 12th, L. H. Luckhardt, Tarkio, Mo., will disperse his stud of registered Percheron stallions and mares. Four Mammoth-bred jacks are included. There are twelve mares and eighteen stallions listed. Of this number eighteen head are owned by Mr. Luckhardt and in order to make the sale number attractive H. P. Hurst, H. E. Miller, D. O. Murphy, W. F. Baker and J. W. Hanna contribute the remainder of the offering. Mr. Luckhardt has bred Percherons for a number of years, using good stallions on a foundation of high-class mares that have produced regularly colts that made good as breeders and producers of a good type of Percheron. Mr. Luckhardt's horses are blacks and dark grays that have plenty of scale and quality. The older mares have been in the harness regularly and are the kind that earn their way and produce a colt each year. They and the fillies old enough to breed have been bred to a McMillan-bred stallion, secured two years ago to head the stud. He is a black four year old included in the sale. Ten of the mares weigh from 1,800 to 2,100 pounds each and several of the tried stallions are ton horses. The jacks are blacks, are large, heavy-boned fellows and are broke. The sale will be held under cover in town and Mr. Luckhardt would like to send you a catalog and will on receipt of your request, mentioning this paper.

Miller's Percheron and Jack and Jennet Sale.

The sale of Percherons and Mammoth jacks and jennets which S. J. Miller, Kirksville, Mo., will hold at his barns in Kirksville on Thursday, March 6th, will be a good place to buy a high-class imported or home-bred stallion, reliable brood mares or jacks and jennets. Mr. Miller has never listed a better class of stock and all are in the best possible condition to show their value. Lot 1 of the stallions is Imp. Incident, a black four year old that should mature into a 2,200-pound horse. He is a rangy fellow with excellent action, good feet and legs and is an extra good foal getter. Lot 4, Instar, is an imported four year old, a steel gray, imported in 1910. He is a well-coupled fellow, strong over loin, is low set on good stout legs. He is one of the very best bred Brilliant stallions to be found. Introvable, an aged imported stallion weighing better than 2,300 pounds, is a black with such action and style that he should please those looking for size and smoothness. King's Model, listed as Lot 6, is a very dark gray two-year-old stallion by Mr. Miller's reserve stud stallion, Imp. Echanson, and out of an imported mare. His scale, conformation and quality are such that he should please the more discriminating buyer. Perfection is a steel gray colt, two years old and is one that will grow out well and make a ton horse. He is listed as Lot 3. Joe Funston, a six-year-old black, is a tried sire that gets stock of the right sort, as will be seen by some of his get in the sale. The mares are a goot lot and should be appreciated. The jacks and jennets are all high class and of the most useful ages. Note advertisement elsewhere in this issue and when writing him kindly mention this paper.

Sheehan's Poland China Sow Sale.

On Monday, February 24th, at his farm near Stuart, Iowa, J. M. Sheehan will make a public sale of fifty head of big-type Poland China sows and he never fails to put up a good offering. He is selling fifteen tried sows and thirty-five spring gilts. Nearly everything in his sale is sired by or will be bred to his 800-pound yearling boar, King Wonder, which is one of the greatest living sons of Fesenmeyer's old A Wonder. King Wonder will step in the sale ring for exhibition February 24th weighing 800 pounds in his yearling form. He is an excellent feeder and has been doing well since the breeding season. Breeders and field men pronounce him one of the good herd boars of the corn belt. I am having what is termed as a King Wonder offering, mostly bred to or sired by him. His get are bred to Big Orange 2d, a big, robust, heavy-boned son of Big Orange, and out of a Colossal dam. Some are bred to King Look, a son of the 1,000-pound Choice Look, and he out of a Long King-Giantess dam; also Big Nelson, a grandson of Pawnee Nelson, and out of the grand old Expansion sow, Lady Ohava. The latter sow is the dam of Colossal and Big Sensation, two noted herd boars. He is selling sixteen good, useful tried sows that raised two good litters last season, of which there are two two year olds and fourteen yearlings. The entire crop of spring gilts go in the sale, thirty-two in number. Among the sows are Lady Look, the dam of the boar that topped the October sale. Mr. Sheehan also sells three good Smooth Giantess sows sired by Choice Look, another Giantess sired by Tecumseh Longfellow, one sired by Big Crow and a number of good, smooth sows sired by Choice Look. No. 1 in the catalog is a Lady Ohava sow sired by Prospect Jumbo. Other sows are sired by King Giant and Guthrie's Mastodon, a Wheeler-bred hog. All the sows are bred to the 800-pound King Wonder. King Wonder has proven himself a first-class sire, especially of gilt stuff. We are calling attention to No. 22 in the catalog, a March gilt sired by King Wonder and out of Queen Ohava, a Choice Look sow. This is an outstanding good gilt. She has quality to give away and will weigh 400 pounds by sale day. She is bred to Big Orange 2d for an early litter. Her litter will carry A Wonder and Big Orange blood lines. A majority of the gilts are out of Giantess sows that trace to the old Giantess, that made Fred L. Rood famous in southwestern Iowa. Other gilts are sired by Chief Price See, a son of Chief Price Again; Big Tom Jr., a son of the first-prize boar at Lincoln, Neb; Wapsie Giant, and Mammoth Wonder, a litter brother of King Wonder. The entire offering are of popular big-type breeding. M. T. White will represent The Homestead at the sale.

Eggert's Imported Stallions.

George Eggert, Newton, Iowa, has an announcement in this issue of The Homestead that will interest anyone expecting to buy a draft stallion or mare, either imported or home bred, during the next few weeks. Mr. Eggert has the big, drafty, heavy-boned kind and he can make prices that will interest prospective purchasers. Write him your wants, mentioning The Homestead.

Prichard & Sons on the Horse Outlook.

W. E. Prichard & Sons, Ottawa, Ill., the well-known importers of Percheron and Belgian horses, write us that they have been experiencing a brisk and consistent demand for big, strong, rugged drafters. They state that the trade shows a decidedly optimistic tone. They state further: "Our prediction, early in the season, that bumper crops and progressive public sentiment in live stock channels would create a keen demand for good draft stallions in 1913 has come true. Never has there been a more earnest desire on the part of the American farmer to take up the raising of pure-bred draft horses than during the early weeks of 1913. And this desire is expressing itself in a substantial way. Action has taken the place of hesitation and breeders are supplying themselves with high-class stallions to meet the demands of the coming season. To those who have not yet supplied themselves we will say that we have on hand a splendid collection of Percheron and Belgian stallions, imported and American bred, ranging in age from yearlings to six year olds. In buying a stallion a man should be critical. We like to show our horses to the critical buyer, because we know they will stand inspection. If you want the big-boned, clean-jointed kind, with deep bodies and wide ends, come and inspect our offerings. They will please you. During the past ten days we have sold and shipped three stallions to Illinois buyers, two to Montana, two to North Dakota, one to Minnesota and one to Maryland. It's easy to buy of us because of prices are reasonable, our guarantee reliable and our methods of doing business clean and satisfactory. Others have found these things to be true and you will be no exception to the rule." See advertisement elsewhere.

Donohoe's Angus Sale.

On March 5th, M. H. Donohoe, Parnell, Iowa, will hold a sale of Aberdeen Angus cattle at the Williamsburg sale pavilion. G. W. Felton, Knoxville, Ill., is consigning ten head of excellent females to this sale. Fifty-two head will be sold in the sale, consisting of ten bulls and forty-two females. Among the bulls are a number of high-class herd header propositions. Black Oakfield is one of the best bulls in the sale. He is a September yearling by Black Woodlawn and out of Black Cap Cherokee 2d. This bull has been good enough for Mr. Donohoe to use on some of his best cows and to those who know Mr. Donohoe this is sufficient evidence that he is a good one. Bombay D. is another July yearling by Egan Star by Black Woodlawn that is an extra good bull and will suit someone looking for a herd header. Bedford D. is a son of Black Woodlawn that will suit a critical judge. Black Banco D. is an extra good Queen Mother bull that will sire a lot of market-topping steers for someone. Among the cows Blackcap 26th is one of the best propositions in the sale. She is the daughter of the noted cow, Blackcap Judy, and sells with a heifer calf at foot sired by Bermerton's Prince. Blackbird Mary is another one of the good cows Mr. Donohoe is listing for this sale. Angus breeders generally know the reputation of this cow as a breeding cow and she is due to calve in May. Blackbird Favorite 3d is a daughter of Black Woodlawn and a half-sister to Mr. Battles' great show cow, Blackbird Favorite 2d. Blackbird McHenry 73d is an extra good cow by Proteros. Mr. Felton is listing some of the very best cows he owns. Blackbird McHenry 66th is an extra good cow that has changed hands at a price well up in three figures and few better ones can be found. Her daughter by the great show bull, Bermerton, is also cataloged. Blackbird Cherokee 26th is an extra good cow that Mr. Felton very reluctantly consigns in order to make the sale attractive. This sale will interest any Aberdeen Angus breeder in need of a herd bull or valuable female to add to his herd. A catalog can be had by mentioning The Homestead when writing to M. H. Donohoe, Parnell, Iowa. See the advertisement elsewhere in this issue.

Suzette 1526, Champion of Iowa, 1912, Changes Ownership.

This beautiful sorrel filly, adorned by a silver mane and tail, was foaled at H. Lefebure's farms at Fairfax, Iowa, in 1910, present weight 1,930 pounds. She was the first-prize yearling filly of the Iowa State Fair and the Chicago International in 1911. At the Iowa State Fair in 1912 she was first in the two-year-old class in competition with the best imported fillies of this and adjoining states; she won championship of Iowa over matured and imported mares, and she was the reserve champion at the Iowa State Fair in the open champion class, all states competing. At the Chicago International in December, 1912, she won fifth in the strongest class of Belgian mares ever lined up in an American show ring. At the same place she won a $100 gold medal offered by the Belgian Horse Society of Belgium. Besides the above prizes she won several specials given by the Belgian Horse Society of America, making a total of one gold medal and ten ribbons, all blues but two, won by this noted Linn county filly in just two years' time and at the greatest shows of the country. Mr. Lefebure sold this filly recently to Ben L. Clark, Shannon City, Iowa, for $1,500. Mr. Clark also purchased a team of imported blue rdan Belgian two-year-old fillies for $1,400 and his purpose in buying Suzette is to use her as a cornerstone in the establishment of a stud of pure-bred Belgian horses on his farms. At the St. Louis World's Fair of 1904 it was a two-year-old filly bred and exhibited by H. Lefebure that was the grand champion Belgian mare of that show; this filly and her three-year-old sister, also bred at Fairfax, were sold to the Reed Ranching Co., Alberta, Canada, for $2,000 to be used as the foundation of a stud of pure-bred Belgians, that has already become very popular in western Canada. The above indicates that if the Iowa farmer would give his colts proper care and attention it would soon become unnecessary to go to Europe for good horses. We lead the world in cattle, hogs and sheep, and if the horse breeders would give their horses the same care that the cattlemen give their cattle we would soon lead the world in horses. Mr. Lefebure imported forty head of Belgians last April, sixty head in October and, in order not to allow the supply on hand to run low, he has arranged for another large shipment to arrive the 15th of March. See advertisement elsewhere in this paper.

Meith's Short-horn and Poland China Sale.

One of the early March sales of the season will be the one that will be made by A. L. Meith, Cairo, Neb., on March 5th. At this time Mr. Meith will offer forty head of young Short-horn stuff and forty head of Poland China bred sows. This sale should interest those looking for good stuff and yet not wishing to pay the price for an abundance of fat, as is necessary at some auctions, for this stock, both the Short-horns and the Poland Chinas, will be presented in their working clothes. We do not mean that they are not just as good as though they were heavily fatted, for they are just as good and in many ways better, yet many buyers will pay for the big fat and many men are disposed to supply what the market wishes. However, it will be possible to buy these cattle and hogs at a little less money than if they were in the pink of condition, but all that money is absolutely net to the buyer, for the excess burden of fat just mentioned avails the buyer but little. Mr. Meith is a pioneer in the breeding of pure-bred stock in Nebraska and of the older herds his is one of the top ones. This herd of Short-horns was founded when the country and the business was new. It should be the place to buy good stuff and we believe that it will. The young things are mostly sired by the good breeding bull, Lord Missie 2d by Prince Victor 2d by Prince Gloster. His dam was the good cow, Victoria 8th, and the dam of Prince Victor 2d is the noted cow, Victoria Countess, a cow that Geo. Allen paid Mr. Dryden $1,000 for. The Poland China offering is a strictly useful one and of good blood lines. Mr. Meith has always employed good breeding and the results of it are apparent. Try and attend this sale if in need of something of this sort, for there will be such a number to sell that there are bound to be some bargains. Parties from all points can easily gain access to Grand Island and the Burlington passenger trains leave there for Cairo at 3:06 and 10:25 o'clock in the afternoon, and a local freight leaves about 7:30 in the morning. Make plans to attend this sale and if possible go to Cairo the afternoon of the day before.

Broughton's Hereford Bulls.

In a recent letter from Ben Broughton, Lake View, Iowa, he has the following to say about some bulls he is offering: "I am offering a splendid young bull called Dobson that is good enough to head any herd. He is a November calf and will weigh 1,100 pounds. This bull will make a herd bull for any of our best herds and the man who wants him should lose no time in coming after him, as he will not remain long with the present demand. Another young bull sired by Beaumont Jr. and out of Mellita, a granddaughter of old Autocrat and Washington, is also for sale and I will price him where any man can afford to buy. The sire of the first bull mentioned, Dobson, is Beaumont Jr., and his dam is Dimple, one of the largest strain of cows on my farm. This young bull will weigh 2,400 or 2,500 pounds when matured and he is a strictly herd-heading proposition." Write Mr. Broughton about these bulls, but the best thing to do is to get on the train and go and see them.

Pederson's Poland China Sale.

On February 28th, at Dunlap, Iowa, C. M. Pederson will make a public sale of forty head of bred sows and it will be one of the very last sales of the season. He is selling a nice, useful and well-bred bunch of sows bred to good boars and it will be a splendid place to buy. There will be fifteen tried sows in the sale and these are as good as he has in his herd. Then there will be fifteen tried sows in the sale and these are as good as he has in his herd. Then there will be fifteen head of fall yearlings and ten head of spring gilts. Many of these will be sired by Gold Dust Wonder, while others are sired by Chief Price Again, Miller's Tecumseh, Miller's Chief Price, Long King's Enterprise and Ruebel's A Wonder. These sows are bred for early litters to Long Orange, a son of Big Orange; also to Gold Dust Wonder and Defender Again. As this will be one of the very last sales of the season it behooves you to be at his sale if you are going to want Poland China sows. M. T. White will represent The Homestead at the sale.

Fifteen Short-horn Bulls for Sale.

On Saturday, March 8th, at Malvern, Iowa, on the morning of the day of the breeders' draft horse sale, George H. White, Emerson, Iowa, and I. J. Swain, Malvern, Iowa, will sell fifteen head of good Short-horn bulls. Remember that these bulls are going to be sold in the morning and the stallions and mares in the afternoon and those who are going to want these bulls should make it a point to be at Malvern in the morning. Mr. White is one of the best known breeders in the West and he is selling some very choice young bulls from his herd and of his very best breeding. Mr. Swain is also selling some excellent young bulls. One of the bulls they are selling is Sultan Goods by the noted sire, Best of Goods, and out of Village Sultana by Whitehall Sultan. This bull was calved in October, 1911, and is a splendid individual and none better bred. Another good young bull is sired by Best of Goods and is out of a Butterfly cow. Another good bull is Roan Goods, calved December, 1911, by Best of Goods and out of Barmpton Fashion by Imp. Fashion's Favorite. This fellow is very thick and a beefy bull every way you look at him. Then there is another by Best of Goods and out of a Missie cow by Lord Banff 3d. This fellow is past nine months old and a good calf. All of these bulls are very choice and anybody wanting Short-horn bulls should be at the sale.

Healy's Great Sale of Spring Gilts.

On Saturday, March 8th, J. H. Healy will sell sixty head of Poland China spring gilts at Manilla, Iowa, and in many ways it is one of the exceptional offerings of the winter season. There is not an old sow in the sale, every one being a spring gilt, and the entire offering will average right around 400 pounds. They have the size and the quality combined and are bred along big-type lines. The entire offering is sired by Lingford's Choice 60911, the second-prize senior yearling boar at the Nebraska State Fair in 1911. This hog was one of that sensational litter that W. A. Lingford showed that season. One of his litter brothers won first, the Healy boar won second and the other boar was third that year. The first-prize boar was shown again last fall at Sioux City, where he again won first prize. We simply call attention to this at this time to show you what kind of a boar Mr. Healy is using at the head of his herd. Many of the best gilts are bred to the great young boar, Colossal H., that was the top boar in the Alvin Windom sale last fall. The remainder are bred to one of the top boars in the Joe Goltry sale in November and from these facts you can just make up your mind that you will see a great line-up and all sired by or bred to the best boars that Mr. Healy could buy. Nos. 1, 2, 3, 4, 5 and 6 are all litter sisters and they are out of a sow called Edna by Young Look, bred by Johnny Meese, of Nebraska. These are outstanding good gilts and they will average 400 pounds and there is not a poor one in the bunch. You could shut your eyes here and pick a gilt and be sure you would get a good one. Nos. 7, 8 and 9 are out of Broadface Hadley, a daughter of Mogul Hadley, bred by John Blain, and these are just as good as he will offer in the sale. Three April 17th gilts Nos. 10, 11 and 12, are out of a sow called Lengthy, a daughter of Mogul Hadley. The dam of these gilts is one of the largest and best sows in the herd. These gilts, while farrowed in April, are going to weigh 400 pounds by day of sale. Four other April 9th gilts are out of Sweet Hadley and will rank right

NEXT WEEK'S SALE PROGRAM

Monday, February 24	Poland Chinas, J. M. Sheehan, Stuart, Iowa. Duroc Jerseys, Madison Spencer, Audubon, Iowa. Duroc Jerseys, Jess C. Andrew, La Fayette, Ind.
Tuesday, February 25	Short-horns, R. M. Parker, Midland City, Ill. Poland Chinas, W. M. Shrader & Co., Stuart, Iowa.

Omaha; Citizens State, 1st State and St. Paul State Banks, **St. Paul, Neb.** Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

ST. PAUL, NEBRASKA

along with the rest. We have just mentioned a few of these, but there are a lot more that are just as good as these we have spoken about. We will guarantee this, that no man who goes to the sale will be disappointed in the Healy offering. It is one of the best offerings of young sows that we have seen in any sale this winter. Write for his catalog and mention The Homestead. M. T. White and C. C. Carlin will represent The Homestead at the sale.

McCarty's Hereford Sale.

The dispersal of T. E. McCarty's herd of Hereford cattle at Peoria, Ill., Thursday of next week, February 27th, should be kept in mind by our readers. The forty-five head to be sold are a well-bred and well-made lot, the kind that will be profitable on any farm in the corn belt. Hereford cattle have worked for Mr. McCarty for many years and he would not dispose of his present herd under any circumstances were it not that he has decided to make a change in his farming operations. This sale follows that of W. T. McCray, at Kentland, Ind., and parties can go from Kentland to Peoria the evening of the McCray sale. Look up the advertisement elsewhere in this issue and arrange to attend this sale.

The Arney Angus Sale.

One of the earlier Aberdeen Angus sales of the season and one that should attract attention will be that of J. V. Arney at Leon, Iowa, on February 27th. The Arney herd has been regarded as one of the best herds in the state and he is selling a very choice lot of cattle in this sale. Among these are show and breeding cattle of the highest order and these are sired by many of the more noted bulls of the breed. There will be twenty-five of his very best cows and heifers listed for the sale and ten young bulls. It will be a most excellent time to buy Angus cows or heifers and it will be a good place to buy a few good young bulls. All of the females that are old enough will be bred and safe in calf to his splendid breeding bull, Black Star 2d, a bull that has sired much of the show stuff that he has been winning on at the fairs. Some of these show cows and heifers he will sell in the sale. Among these is that splendid two-year-old heifer, Katrine of A. She is a royally bred K. Pride and she is in calf to that splendid young bull, Ebony of E. 3d, a prospective young show bull that he recently sold to Mr. Coldwell, of Missouri. This heifer was always in the money and was never lower than fourth, exeept at the International. She is just one of the many good ones that he is selling in the sale. There wil be ten head of good Blackbirds, three Trojan Ericas and the balance will be K. Prides, Queen Mothers and Pride of Aberdeens.

HAMPSHIRE SWINE.

VALLEY VIEW HAMPSHIRES. Breedn stock, either sex, any age, quality unexcelled, satisfaction guaranteed. Fred Wheeler, St. Charles, I

He is selling daughters of such famous sires as Imp. Earl Eric of Ballindalloch, Imp. Black Jester of Ballindalloch, Imp. Proteros and other famous sires. If any of The Homestead readers are on the market for Angus cattle the Arney sale will be an excellent one to attend. Write him for catalog and kindly mention this paper.

The Shadeland Hereford Sale.

On March 6th, at the famous Shadeland Hereford Farm at Kingsley, Iowa, J. A. Shade will make his annual sale of fifty head of registered Hereford cattle. The Shadeland herd of Herefords is today regarded as one of the greatest herds in the West and this draft is one of the best that has ever been sold off the farm. There will be twenty-six head of young bulls in the sale of the highest class and most fashionable breeding. Among these are bulls that can go out and win next fall, and there are some splendid herd bull propositions in the offering. It is a great bunch of bulls throughout, we think the best that Mr. Shade has offered in recent years. More than two-thirds of the bull offering are over sixteen months old. Every bull has been retained for this sale, so you get the pick of all the bulls raised on the farm last year. Among the bulls offered is Rex Dorion, a son of the great and noted bull, Dandy Rex. He is a four year old and a splendid breeding bull. This bull has been used in the Shadeland herd with the best of success. He is the sire of Beau Albany, that sold in his last April sale to go to L. A. Clifford, of Canada, at a long figure, and he is also the sire of the great show heifer, Petunia, in the C. A. Tow sale. Beau Dover, a Gudgell & Simpson-bred bull, goes in, and he was one of the best things that that noted firm have turned out in recent years. There will be six very excellent young bulls by Beau Elect in the sale—Elect 4th, Elect 5th, Elect 7th, Elect 9th, Elect 10th and Beau Albany 2d. Any one of these bulls will make a good herd bull and they are out of the best bred cows on the farm. The breeding and individual merit of these will commend them to anybody looking for herd bulls. Another splendid bull that is listed is Monarch 9th and several of the best cows in the sale are bred to him. Among the other good ones are Beau Matchless by Beau of Shadeland 35th, Matthew of Beaumont Jr., Duke of Dudley and Belfast, any one of which should make great breeding bulls. Fourteen of the best cows in the Shadeland herd have been listed for this sale, all with calves at foot and bred again. Ten of the

TOO LATE TO CLASSIFY.

Swallow's Closing-Out Sale

Dispersion Sale at My Farm Near BOONEVILLE, IOWA, THURS., MARCH 6

MY entire herd of fifty Poland Chinas will be disposed of at this sale. It includes a prize winning herd boar, A Wonder; two coming yearling boars, eight boars five months old, nine tried two-year-old sows, ten spring gilts and thirteen head of fall pigs. The sows carry the best strains of blood of the breed. They will have been bred for March, April and May litters. The older ones are recorded and all others are eligible to record. Buyers will be met at Booneville and Waukee.

W. Z. SWALLOW

John Duff, auctioneer. **Waukee, Iowa.**

REGISTERED Shropshire rams and ewes of the best breeding and quality. Prices reasonable. **Willard Miller, R. F. D. No. 2, Anita, Iowa.**

calves that sell with their dams are nearly of serviceable age. This includes Delight 3d, the two-year-old champion cow; Lady Lavender by the champion bull, Castor; Geraldine by young Beau Brummel, nearly a full sister to the champion, Scottish Lassie. He is also selling that splendid cow, Petonette, a daughter of that world-famous bull, Beau Brummel, and this is one of the last chances to buy a daughter of that noted sire. Ten splendid two-year-old heifers have been reserved for this sale and they are an excellent lot. These are all bred and safe in calf and in point of breeding and individual merit cannot be surpassed in any sale this year. The Shadeland offering is one that every breeder should be interested in, as well as every farmer who might want a bull. Make it a point to get the catalog and be sure to be present on day of sale. Write J. A. Shade, Kingsley, Iowa, and kindly mention The Homestead.

A Great Poland China Boar for Sale.

In the dissolution Poland China sale of W. M. Shrader & Co., at Stuart, Iowa, on February 25th, there will be two splendid boars that should attract the attention of breeders who are going to want a herd header. One of these is the great boar, Choice Look, a son of Chief Look by old Grand Look. His dam is Fashion's Pride by Woodland King. This boar is a four year old, but he is one of the great breeding boars today in the West. He is a 900-pound boar in his everyday clothes and is a breeding boar of unusual merit. He is just such a boar as all of the big-type breeders are now looking for and some enterprising breeder who is onto his job will be on hand to buy him. He is the sire of Choice Look 2d, the Sid Reed boar that won at the state fair last fall, and he is the sire of the top of several of the best sales during the past few years. His get in this sale will prove all we have said about him and had we not seen his get and know how he breeds we would not be as emphatic in insisting that here is a boar for the big breeders to go after. He is a large hog and he breeds size and quality to go with it. The breeders of big-type Polands will miss it if they pass this boar up, as he is a hog that the best of them can use. The young boar, Big Improver, is also a promising young boar and he was one of the highest-priced boars last fall. He is a grandson of Big Victor and Hadley's Expansion and he is a good young boar. Now about the Choice Look sows that they are selling in this sale. They are an outstanding good bunch of sows with size and quality and here will be one of the best sale offerings of the rapidly closing season. Many of the sows not related will go into their sale bred to Choice Look. Write W. M. Shrader & Co., Stuart, Iowa, for catalog and kindly mention The Homestead. M. T. White will represent The Homestead at the sale.

The Kansas City Hereford Cattle Sale.

The sixty Hereford bulls and forty females that sell in the Kansas City sale on March 4th and 5th, under the management of R. T. Thornton, 1309 East 15th St., Kansas City, Mo., have such quality and breeding that buyers should be attracted from a wide territory. The list of breeders contributing to these sales is sufficient guarantee that the cattle are right. Many choice herd headers have been sold in former sales held by them and there are more prospects of this sort in this than in any former sale they have held. The females are such that buyers wanting a choice cow or two to add to herds or those desiring to buy foundation stock should inspect this offering. Benton Gabbert, one of the oldest and most successful breeders, says their bulls are much better every way than the first Hereford bull he bought for $500. They are an even lot, well bred and well fed on feed raised on the farm. Mr. Gabbert mentions Lot 42 of the catalog, Columbus Prize 25th, a November yearling by Columbus 53d, a son of old Columbus and out of Viola by Onward 19th that he sold to the state university, where he sired several prize steers. His individuality and select pedigree should insure a good herd header. Mr. Gabbert also sends a fine string of Beau Folly bulls that are out of Columbus dams and those looking for serviceable bulls, with good size and splendid bone, should inspect these. J. W. Lenox sends a string of Simoon bulls to the sale that will bear the closest inspection. Simoon was got by old Beau Brummel, out of a granddaughter of Anxiety 4th, and is one of the good Anxiety bulls in service. The catalogs of the sale tell of the breeding of the offering and as this is the time to buy good cattle our readers who are looking for Hereford bulls or females should arrange to attend this sale. Note the advertisement elsewhere in this issue and write Mr. Thornton now for catalog.

Kent's Chester White Sows.

Elsewhere in this issue will be found the advertisement of Thos. F. Kent, Walnut, Iowa, who is offering for sale a grand good lot of Chester White sows. The Kent herd was one of the greatest prize-winning herds out last fall and for the past year or two. Last fall he went all through the circuit, beginning at Des Moines, then at Lincoln, Hutchinson, Topeka, Sedalia, Springfield and several other great fairs and he made a killing at every show. Mr. Kent has one of the greatest Chester White herds today in this country and no herd living can show a better line of breeding. Mr. Kent formerly owned that celebrated boar, Combination, and he has more Combination blood in his herd than any other in this country. This old boar, Combination, has been one of the most wonderful boars of the breed, both as a show winner and as a sire of show winners. The blood of old Combination lives on and if you want to get it from the fountain head you will have to buy it from Mr. Kent. Other boars used in the Kent herd have either been noted winners or have been sires of noted show hogs, so you can therefore get anything you want.

HEREFORD SALE

By FUNKHOUSER, GABBERT and OTHERS

OUR SEVENTH BIG ANNUAL TWO-DAY SALE

To be held at KANSAS CITY, MO., MARCH 4-5, '13

60 BULLS
40 COWS
AND HEIFERS

EVERY ANIMAL TESTED FOR TUBERCULOSIS. Sixty splendid, big, lusty bulls of serviceable age. Forty excellent young cows safe in calf or with calves at side. Representatives of herd bulls that have made Hereford history. A selected lot from the following well-known breeders:

Benton Gabbert, Dearborn, Mo. — J. W. Lenox, Lake City, Mo.
W. A. Dallmeyer, Jefferson City, Mo. — S. J. Gabbert, Dearborn, Mo.
Funkhouser Estate, Plattsburg, Mo. — T. W. Carmichael, Odessa, Mo.
R. T. Thornton, Kansas City, Mo. — James A. Gibson, Odessa, Mo.

We have sold you good cattle at our former sales, but never before have we been able to offer you as many high-class cattle as at this sale.

For Catalog or other information address R. T. THORNTON, Mgr., 1309 E. 15th St., Kansas City, Mo.

He is offering a great line of bred sows for sale just now. He can fill orders for bred sows, yearlings or spring gilts and these are bred to his very best boars. The Kent advertisement was inadvertently omitted a couple of issues through an oversight and we are now urging readers of this paper who want the best of Chester White bred sows to rush their orders at once. When ordering of Mr. Kent you are getting Chester Whites from a herd that has not had any disease and you are buying from one of the best herds and from one of the best breeders in this country. We therefore say to our readers who are wanting some bred sows to lose no time in getting their orders to Mr. Kent. Kindly mention this paper when sending your order.

Limestone Valley Farm's Jack and Jennet Sale.

L. M. Monsees & Sons, Smithton, Mo., have listed for their thirty-fifth annual sale of jacks and jennets, which is to be held on Tuesday, March 4th, a class of stock that should and undoubtedly will please the more discriminating buyers looking for Mammoth jacks and jennets. Thirty-five head of jacks and twenty-four head jennets are listed, which insures a full day of selling and ample opportunity for selecting from a large number of high-class jacks and jennets. There are in this sale twenty as good jacks as have ever been gathered under one roof and for sale. They range from four to six years of age, are fifteen and one-quarter to sixteen hands standard measure, are blacks with white markings and have as much bone and quality as are possible to find in this number of jacks. They are furthermore as well bred as are found, have the big ears and good heads such as Limestone Valley Farm is noted for. The jennets are in the same class and practically all are in foal to the World's Fair champion, Orphan Boy, a jack that has no superior as a sire. A large number of these sell with colts at foot and among these colts are prospective herd headers. Monsees & Sons make every possible preparation for showing their stock to prospective customers. They would like to have you come a day or two before the sale, so that you will have ample time to inspect the entire offering and ask of them any questions regarding the various animals you may select as being what you desire to buy. Their dealings are such that they bear inspection, they guarantee everything to be just as represented and their guarantee is absolutely good. The catalog is a book of sixty-three pages with illustrations of the stock and Limestone Valley Farm. It is yours for the asking. Note their advertisement elsewhere in this issue and when writing Monsees & Sons kindly mention this paper.

Barker's Futurity Sale.

E. S. Barker's annual bred sow sale, held in his spacious sale pavilion on his farm near Doon, Iowa, was one of the most successful sales of the year. He had the pavilion filled to its capacity when the sale was opened. Among the crowd were breeders, a good representation from several states, and the stock which these gentlemen took with them will prove that Mr. Barker breeds a mighty good kind of hogs. Col. J. A. Benson was at his best, both in his opening address and in the manner in which he handled the sale. Henry Bros., Sheldon, Iowa, topped the sale on a matured sow, No. 5, at $185, with Jerome Summy, Ponca, Neb., coming near them on a gilt at $181. The futurity litter was distributed between Iowa, South Dakota and Minnesota. The first-prize pig was purchased by S. E. Jackson, Hurley, S. D., at $175. The other two of this litter went to J. M. Glasier, St. James, Minn., and E. E. Farver, Ocheyedan, Ia. Ruebel Bros. got a great sow in No. 10 at $150. Mr. Barker's prices did not go to boom figures, but his sale was held at a fairly even figure all through. He was also successful in making some good sales of a few fall pigs. We list all the sales of bred sows below:

1. E. O. Carpenter, Rock Rapids, Iowa ---------- $150.00
2. J. M. Peery, Alvord, Iowa--- 155.00
3. Geo. Van Auken, Doon, Iowa 72.50
4. H. H. Cable, Hudson, S. D--- 80.00
5. Henry Bros., Sheldon, Iowa--- 185.00
6. Geo. Jeffers, Rock Rapids, Ia. 76.00
7. Ed Kressler, Rock Valley, Ia. 72.50
8. Sam Bauer, Le Seuer, Minn-- 70.00
9. Frank J. Hicks, Onargo, Ill--- 75.00

9½. R. E. Beavers, Granite Falls, Minn. ---------- 57.00

10. Ruebel Bros., Marathon, Ia-- 150.00
11. Feay Bros., Larchwood, Iowa 100.00

PERCHERONS, JACKS AND JENNETS

AT AUCTION, AT

Kirksville, Mo., Thursday, March 6th

20 Head Imported and American-bred Stallions and Mares.

25 HEAD Mammoth Black Jacks and Jennets

STALLIONS range from 1,800 to 2,000 pounds, are a tried and proven lot of blacks and dark grays. An exceptional lot of mares safe in foal. The second-prize 2 year old 1911, and first-prize weanling, 1910, at Missouri State Fair are included. The jack and jennet offering is superior in every way. The blood of old Hanibal, Planter and Clearmont predominates. Send now for catalog, mentioning The Homestead.

Col. Geo. P. Bellows, Auctioneer.

S. J. MILLER, Kirksville, Mo.

Dispersion Hereford Sale

PEORIA, ILL., THURSDAY, FEB. 27th

46 HEAD--7 BULLS Including my herd bulls, Bondsman by Disturber and Perfection 2d by a son of the champion, Perfection. This offering will comprise a most useful lot of well-bred cattle, strong in the blood of Disturber, Beau Donald, Perfection, Corrector, March On and other great sires. Ten cows will have calves at foot. I have been breeding Herefords for twenty-two years with pleasure and profit, and were I not making a change in my farming operations these cattle would not be for sale at any price. Send for the catalog, mentioning The Homestead. Colonel Reppert, auctioneer. This sale follows that of W. T. McCray, at Kentland, Ind., February 26th, and can be easily reached from there. Address

THOS. E. McCARTY, PRINCEVILLE, ILL.

REGISTERED PERCHERONS
French Draft Stallions and Mares
AT AUCTION

Battle Creek, Iowa, Friday, March 7th

THIS is a closing-out sale and will include two of as good heavy weight imported Percheron stallions, age 6 and 7 years, as can be found in any importing barn, and have proven good breeders. The balance are mares in foal, fillies and stud colts from the above sires, 12 head in all. This is an unexpected sale. On account of a recent illness will not be physically able to handle them, for that reason I haven't time to make catalog. Registers furnished with each animal.

V. D. WOLCOTT, - BATTLE CREEK, IOWA.

P. McGUIRE and F. O. CUBBAGE, auctioneers.

DISPERSION SALE

Registered Percheron Mares and Stallions

Tarkio, Mo., Wednesday, March 12, 1913

12 Mares and Fillies, 18 Stallions and 4 Mammoth Jacks

TEN of the mares weigh from 1,800 to 2,100 lbs. Several tried ton stallions. Jacks are blacks that weigh from 1,000 to 1,200 lbs., are heavy boned and broke. A strictly useful, high-class lot of Percherons, mostly blacks. Sale in town, under cover, in F. S. Travis' new implement building. For catalog address

L. H. LUCKHARDT - - TARKIO, MISSOURI

Auctioneers: BELLOWS and MANIFOLD.

NOTHING FOR SALE

Hereford Bulls

I HAVE a good thick yearling at $150. A good 2 year old at $125. I will take $100 for the choice of my bull calves, 8 to 12 months old, and they are good ones. Lamplighter, Earl of Shadeland and Beau Brummel breeding. Write or visit at once mentioning Homestead. Farm near Ledyard, Iowa. P. W. REECE, R. 3, ELLMORE, MINN.

Ten Head of Recorded Hereford Heifers for Sale

Call on or address B. W. GREGORY, Harlan, Ia.

C. C. Evans, of North English, Ia.,

Has sold his farm and must immediately reduce his great herd of Chester White bred sows and gilts, and also his fall pigs of both sexes. Therefore he will offer at public sale at farm, 5 miles north of North English, Iowa, on

FRIDAY, FEBRUARY 28, '13

30 Head of Recorded Bred Sows and Gilts, 20 Head of September, 1912, Farrow Boars and Gilts.

Every sow, gilt and boar in this herd and offering has been vaccinated and are immune from hog cholera. This, of course, includes the boars to which the sows and gilts were bred. All will be fully guaranteed to the purchaser to be immune. Sires: Combination 2d, Triumph Joker, Chief O. K., Noximal and New Hampton King. These five blood lines are among the best in the U. S. This offering is bred to Combination 2d and Chief Keokuk 21645. Two boars that are unsurpassed in the great corn belt today. The fine boar, Chief Keokuk 21645, will be in the sale. While this boar has never been shown he is claimed by leading breeders as one of the best individuals of the breed. He was farrowed October 8, 1910, sired by the great Wonder 18069 and out of Counselor Girl 39664. The fall pigs include some "herd header" prospects in both sexes. This is a great chance to get some fine bred sows and gilts. A chance that does not come often. One that has taken much time and money to produce. Time will not permit catalogs to be printed. You know what this offering will be. Come. This is your invitation. If impossible to attend send your mail bid to Jas. R. Moore, of the W. B. C., in my care. Write me for particulars about some of the sows if you can't attend, so you can send a mail bid, but come, if possible, and take advantage of this rare opportunity. I have sold my farm on short notice and am compelled to reduce my herd that I was keeping for my own use, and which I would part with under no other conditions. Free accommodations at both hotels in North English night before the sale. Terms to suit the purchaser. Every sow and gilt guaranteed to be with pig and immune from hog cholera. Full particulars of this guarantee will be given on sale day.

C. C. EVANS, - NORTH ENGLISH, IOWA.

Remember the date, note the guarantee, look at the great blood lines. COME!

JOHN F. HOLST'S

SALE CHESTER WHITE BROOD SOWS

DENISON, IOWA, THURSDAY, FEBRUARY 27, 1913

40---HEAD---40
23 yearlings and tried sows, 17 choice gilts

THE BEST lot of Chester White sows ever sold in Iowa

THESE are sired by Perry, a grandson of old Combination; Young America; Fancy Boy, a son of the great Keep On, and other noted boars. These are bred to Combination III., Ike and Fancy Boy, my three herd boars. I am selling a great lot of sows in this sale. C. C. Evans, auctioneer. C. C. Carlin, field man for The Homestead. Write for catalog and mention The Homestead.

JOHN F. HOLST, JR., - - - DENISON, IOWA

KENT'S IOWA HERD OF CHESTER WHITES

200 BRED SOWS for sale from my great state fair prize-winning herd. One hundred junior yearlings and aged sows that will weigh from 300 to 500 pounds in good breeding condition. Also 100 spring gilts. If you want to buy some good ones it will pay you to come and see them or write me today for prices and the way I will ship these hogs before paying for them. I will pay your railroad fare if I cannot show you as good a herd as you can find anywhere. I can furnish you most anything you want at prices made to sell. When writing mention The Homestead. THOS. P. KENT, R. 2, Walnut, Iowa.

IMPORTANT ABERDEEN ANGUS CATTLE SALE

TO BE HELD AT THE SALE PAVILION IN

WILLIAMSBURG, IA., WEDNESDAY, MARCH 5

52 HEAD--10 BULLS 42 FEMALES

THE BULLS are nearly all herd headers. Among the good ones are Black Oakfield, a great yearling by Black Woodlawn, Bombay D. by Egan Star by Black Woodlawn; Bedford D., a September yearling, by Black Woodlawn. The above bulls are show bulls and good enough to head any herd. Black Banco D. is a good Queen Mother bull. **THE FEMALES** are the best lot we have ever offered. Such great cows as Blackcap 26th, Blackbird Mary, Blackbird Favorite 3d, Blackbird McHenry 73d and many others will be sold. A grand lot of two year old and yearling show heifers good enough to win are cataloged.

G. W. FELTON, Knoxville, Illinois, is consigning 10 extra good females, including the great cow, Blackbird McHenry 66th, and her daughter by Bermerton, Blackbird Cherokee 26th and other good ones. This is an offering of high-class cattle and will interest all Angus breeders. Mention The Homestead when you write me for catalog, and arrange to attend the sale.

M. H. DONOHOE, - - - - Parnell, Iowa.

Silas Igo, auctioneer. Williamsburg is on the Marion-Ottumwa branch of the C., M. & St. Paul R. R.

SHADELAND HEREFORD SALE

The Greatest Lot of Cattle Ever Sold From Our Farm

50 HEAD. 26 Show Bulls of the Highest Class and Most Fashionable Breeding. 24 Cows, 14 With Calf at Side and Bred Again, 10 Two-Year-Old Heifers. 50

KINGSLEY, IOWA, THURSDAY, MARCH 6, 1913

The Kind We Breed at Shadeland, All Sons of Beau Elect, Some Promising Herd Headers. The Picture Shows the Smallest Bulls in the Sale. The 15 Older Bulls are the Same Type

THE grandest lot of young bulls that ever left **Shadeland Farm** go into this sale. Both **show and breeding bulls** of the highest order, with exceptional uniformity and unsurpassed breeding. All of serviceable age, from 16 to 24 months. None have been sold and the best go into this sale. There will be **14 of as good cows with calves at foot** as was ever listed for a sale in the West, and these are all bred again. **Ten of the calves are bulls of nearly serviceable age. Ten of the very best heifers in the herd have been reserved for this sale,** and some of these will make show heifers for the fall fairs. If you are on the market for Herefords come and spend a day at **SHADELAND FARM,** the finest in the West.

Parties attending the Funkhouser-Gabbert combination sale on March 4th and 5th can leave Kansas City on the Missouri Pacific at 10:35 p. m. March 5th, reaching Sergeant Bluff, Iowa, at 10:40 a. m., where there will be an extra train awaiting them to reach Kingsley at 11:30 a. m., March 6th. Through sleeping car accommodations from Kansas City to Sergeant Bluff. Parties from the west can leave Omaha at 7:45 and Council Bluffs at 8 a. m. the morning of the sale. Write for catalog at once.

COL. FRED REPPERT AND ASSISTANTS, AUCTIONEERS.
Please mention Iowa Homestead when writing for catalog.

J. A. SHADE, KINGSLEY, IOWA.

MIETH'S BIG SALE

Poland Chinas Short-Horns

Will be Held at Farm Near

Cairo, Neb., Wednesday, March 5, 1913

40 HEAD of choice cattle, mostly young cows and good, thrifty heifers and young bulls, just old enough for service. They are nearly all the get of **LORD MISSIE 2D** by Prince Victor 2d, he by Prince Gloster, the sire of the $10,000 Prince Imperial. These cattle will be sold in only moderate flesh. They are all of good blood lines, however, and my herd is a very prolific one.

THE FORTY POLAND CHINAS consist of 20 sows and 20 gilts. They are sired by the great breeding boar, Quality by Blue Valley Quality; also by Gold Dust by Raven. Raven is a brother to the champion, King Mastiff. They are mostly bred to Expansion Look by the great Expansion Again and Ideal Sampson by Sampson by Pawnee Lad. The sows are the utility kind, not show stuff, but the sort to raise good, strong, even litters. Send for catalog at once and mention The Homestead. Col. Z. S. Branson, auctioneer. J. C. Price, field man for The Homestead. Address

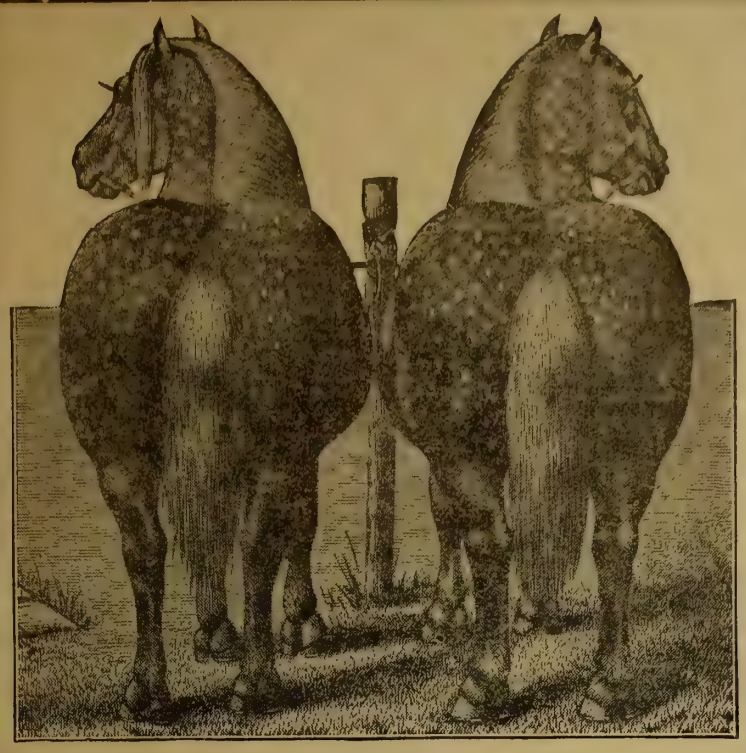
COL. SILAS IGO, Auct.



DANNEN & LOWREY WILL SELL

50 Head of Percherons

AT MARSHALLTOWN, IOWA

THURSDAY, MARCH 6th

THIS offering comprises some of the best in breeding and quality ever put through a public sale, some of them having been shown at Des Moines, Sioux City, Dakota and Minnesota State Fairs, winning everywhere. Among them is the four-year-old stallion, Jambameau 82337 (83856), first-prize winner at the great show at Minneapolis, 1912. This offering is young, clean and nearly all imported. Their pedigrees inspected and passed by the French and American governments. Thirty-eight of these are mares, and all old enough are bred to the best imported sires. All stallions offered, with one exception, are imported, and were selected with the same care we would use in picking one for our own use. Address for catalogs

R. C. DANNEN Marshalltown, Iowa, or H. C. LOWREY, Nevada, Iowa.

Sale to be held in Harmon's sale barn, Marshalltown. Auctioneers, Col. P. McGuire, Col. John Garris.

HORSES AND JACKS.

OAKLAWN STOCK FARM BREEDS AND IMPORTS

PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

We have enjoyed an excellent trade in stallions and mares during the past few weeks and we believe the main reason is because we have had a class of horses that met with the approval of good horse judges. The accompanying illustration is a good likeness of one of the stallions we have for sale and will give you an idea of the high character of stallions we import and breed. Our winnings at the Iowa State Fair, 1912, where we made our first exhibit, were given in a quarter-page advertisement in the January 16th issue of The Homestead. Our last importation of stallions and mares arrived in November and these are now in nice condition and we willbe glad to show them to prospective purchasers. Our horses have the bone, size and draft qualities that all the horsemen like. They are a clean-limbed, sound, good-acting lot of horses and we can please anyone in need of a high-class stallion or mare. I treat my customers right, which is shown by the fact that I have sold men their third and fourth stallions. I will make prices that will save you money if you will give me a chance. Visit or write me, mentioning The Homestead.

GEORGE EGGERT - - - NEWTON, IOWA

HENRY LEFEBURE, FAIRFAX, LINN COUNTY, IOWA

HOMEWOOD STOCK FARM PERCHERON, BELGIAN, SHIRE STALLIONS AND MARES

Now is the time to buy a good stallion or mare. We have the kind you have been looking for. Our horses arrived home in October, are now perfectly acclimated and in the best of condition to do you a lot of good. The Percherons are two and three years old with size, bone and draft horse qualities, many of them weighing over a ton and not fat.

Our mares are of the best brood type. All are in foal and plenty of ton mares to select from. Every animal guaranteed sound and a satisfactory breeder. Others say we have the best bunch of two-year-old Percherons they ever saw. You will say the same. Come and see us or write for full particulars. You will find horses right, terms right and prices below others of equal merit. We have also a lot of big, heavy-boned American-bred stallions at surprisingly low prices. Don't buy until you have seen our stock. Homewood is on the main line of the Big Four and I. C. R. R., twenty-three miles south of Chicago. Trains hourly to and from the city.
S. METZ & SONS, HOMEWOOD, ILLINOIS.

J. LEITCH & SONS

Announce the arrival of a new importation of

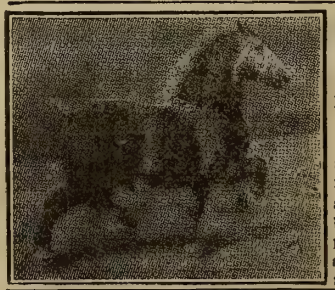
LARGEST IMPORTERS OF CLYDESDALES IN THE UNITED STATES.



W. A. LANG & CO.,

Greeley, Delaware County, Iowa.

Importers [of BELGIAN and PERCHERON STALLIONS and MARES.

We wish to announce to the buying public that we will now, as in the past, give you more good, sound, young horses for the money than you can get elsewhere. We do not advertise cheap stock because we do not think the best breeders want that kind, but we will sell you the good ones at as reasonable margin of profit as possible, and do a remunerative business. All horses are backed up by our GILT EDGE GUARANTEE. Write for full particulars.

Percheron Stallions

ONE coming three, two coming two-year-old stallions, sired by 2,200-lb. stallion, out of daughters of Georgiana, one of the greatest mares of the breed, won the blue at the Iowa State Fair, producing 18 living colts without a break, three of them state fair winners. They are a wonderful family of show horses, and sure breeders. These young stallions will all make better than ton horses. We are pricing them to sell. Address, mentioning Homestead, **WOODLAWN FARM, Sterling, Illinois.**

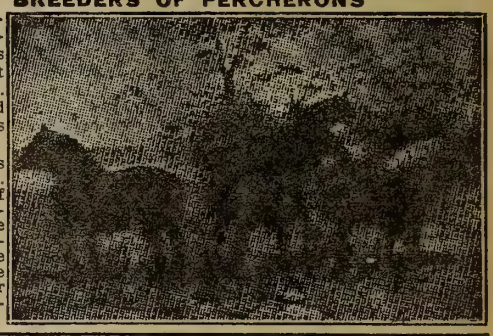
MAASDAM & WHEELER, Fairfield, Iowa

IMPORTERS AND BREEDERS OF PERCHERONS



Our new importation of 81 Percherons arrived in Fairfield September 18th. Forty weanlings will soon arrive, making about 125 imported stallions and mares. These with our 75 American-bred stallions and mares of all ages form a magnificent array of big, heavy-boned, sound Percherons from which buyers may select. We have by far the best lot of Percherons on hand at the present time that we have had since engaging in the importing business. We know we can please you in a horse and our prices are very reasonable. Visit us or write us for what you want, mentioning the Homestead.

The World's Greatest Importing Establishment

Percherons, Belgians, Shires, German and French Coachers, Hackneys

Big, ton black and gray Percherons our specialty—Blacks, black-grays, steel-grays and dapple-grays.

Royal Belgians—We import more Belgian stallions than any other firm in the U. S. Bays, browns, roans, chestnuts and blacks.

Shires—The best that old England produces.

We have at any time of the year more big, ton, high-class Percheron and Belgian stallions than any other firm in the U. S.

If your neighbor is thinking of buying a stallion send us his name and address and we will mail you FREE a beautiful lithograph of our premises, suitable for framing, showing 200 head of stallions.

A. B. HOLBERT, Proprietor and Manager, **GREELEY, IOWA**

VAN STEENBERGE'S

DRAFTERS

40 HEAD Belgian and Percheron stallions now on hand. Imported and American bred to offer. New importation of big, heavy drafters just arrived.

A. M. VAN STEENBERGE,
OGDEN, IOWA

DUNHAMS' PERCHERONS

are today as for the past forty-seven years the

-B-E-S-T-

Fresh importation. Catalogue FREE.

DUNHAMS, Wayne, Du Page County, Ill.

German Coachers

SEVEN or eight head of the very best this breed can show, stallions, mares and colts. An ideal general-purpose breed and we offer this stock at reasonable prices. Write us about them. Address

HELD BROS., - Hinton, Iowa.

PERCHERON and BELGIAN STALLIONS and MARES

IMPORTED and Home Bred. High-class horses on hand.

CALL AND SEE US.

E. H. Knickerbocker & Son
Fairfax, Iowa.

SHIRES

SOME of the very best of the breed. Stallions and mares. Our prices attractive, our horses must please, also our terms.

ED. H. MAGOWAN & SONS, Gibbon, Neb.

Hart Bros.

Osceola, Iowa

Our 1912 importation now in our stables. A high-class lot of imported Percheron, Belgian and Shire stallions and mares. Come and see them.

FORD STOCK FARM

YOUR CHOICE of Imported Percheron and Belgian stallions at $100.00 profit, absolute first cost revealed in plain figures, the best money can buy, positive guarantee with every purchase. Correspondence, inspection and personal acquaintance solicited. INVESTIGATE.

FORD & HARRINGTON, Parker, So. Dak.

STALLIONS

Home-bred draft stallions, $250 to $650. Guarantee to sell you imported stallions for less money than any firm in America. Come to a live stallion market and see all draft breeds.

A. LATIMER WILSON, Creston, Ia.

OUR ENTIRE HERD OF 40 SHETLAND ponies for sale at closing-out prices. Address Spivey, Robb & Co., University Place, Neb.

FOR SALE Ten head of Percheron stallions, mares and colts. Address Ashbaugh Bros., Maynard, Iowa.

PERCHERON STALLION in P. S. A., foaled June, 1910, wt. 1700. State certificate of soundness. C. W. Chandler, R. 4, Kellerton, Ia.

TAYLOR & JONES

INTENDING BUYERS OF STALLIONS, EITHER

Percherons, Belgians or Shires

should not overlook the fact that We Won, at the Illinois State Fair 1912, GRAND CHAMPION Shire Stallion, GRAND CHAMPION BELGIAN Stallion, Grand Champion Herd of Best Five Percheron Stallions, Grand Champion Herd of Best Five Belgian Stallions, FIRST PRIZE aged Belgian Stallion, FIRST PRIZE three-year-old Belgian Stallion, FIRST PRIZE two-year-old Belgian Stallion, FIRST PRIZE three-year-old Percheron Stallion and Second and Fourth Prize aged Percheron Stallions. Our **Stallions defeated those of all other importers for every Championship in all the draft breeds.** These stallions are all for sale, with many other winners, at prices below what common horses can be bought for at many other importing barns. We also have for sale a nice line of extra good imported and American-bred mares. Send for our booklet containing prices and guarantee.

TAYLOR & JONES, Box 68, Williamsville, Sangamon County, Illinois.

THE Imported Shire Stallion, Severn Flag 12749 (28763), GRAND CHAMPION at Illinois State Fair, 1912, also winner of First Prize and Reserve Champion at the International, 1912.

LIVE STOCK PHOTOGRAPHS

FOR use in sale catalogs, and for other advertising purposes, nothing equals engravings made from actual photographs. We have the most complete photographic equipment, as well as a photographer of superior ability in posing animals. We send him anywhere on request and quote prices as low as is consistent with good work. Let us send him to you before arranging your season's advertising. Address

PIERCE FARM WEEKLIES, DES MOINES, IOWA.

FAIRVIEW JACK AND JENNET FARM

60 HEAD MISSOURI AND KENTUCKY BRED. A strictly high-class lot of Mammoth Jacks and Jennets, 14½ to 16½ hands high, with plenty of bone and quality. Everything guaranteed as represented, and priced right. Address

J. C. HUCKSTEP, BOLIA, PIKE COUNTY, MISSOURI

PERCHERONS BELGIANS SHIRES

ONE OF THE OLDEST AND LARGEST IMPORTERS IN AMERICA

Our horses are big, smooth flat-boned fellows, with great quality style and conformation. Will please the most critical. Prices reasonable. Satisfaction guaranteed. Letters from hundreds of satisfied customers and big illustrated catalog mailed free.

Watson, Woods Bros. & Kelly Co.
803 80 LINCOLN, NEB.

Percherons

I AM offering some splendid yearling and 2-year-old stallions for sale at popular prices. Address

MONROE AYERS - Shenandoah, Iowa.

---

10 Prize Winning Belgians

IMPORTED and home-bred stallions and mares, ranging in age from yearlings to matured horses. Some splendid mares and studs for sale. For particulars address

ED BOLL, JR., - SCRIBNER, NEB.

IMPORTER AND BREEDER OF PERCHERONS AND BELGIANS

CUSTOMERS get their money's worth on stallions and mares. Every animal just as represented. Can't be under sold by any firm, considering quality. All young, from yearlings to five year olds. Farms one mile from town. We meet trains.

C. G. GOOD - OGDEN, IOWA

SHIRE AND PERCHERON STALLIONS AND MARES

IMPORTED animals that have been over long enough to be fully acclimated and in thrifty condition, good horses with show quality at reasonable prices. We can suit critical buyers and invite personal inspection. Will meet buyers at C. R. I. & P. or Interurban Ry. if notified. H. P. Wilkinson & Bros., Mitchellville, Ia.

PERCHERON STALLIONS

FOR SALE. One imported 6 year old, one home-bred 4 year old. Extra good ones. Good breeders.

SMITH & BAUMERT.

Postoffice, R. 1, South English. Keokuk county, Ia. Stations—South English and Harper, Iowa.

IMPORTED PERCHERON AND BELGIAN STALLIONS AND MARES

Also Home-Bred Stallions

I think it is better to have extra good stallions to show when customers come to see, than it is to claim you have them and cannot show. If interested, write or come and see me.

Bell Phone 237 or Union Hotel. On C. B. & Q and Santa Fe Railroads.

J. R. JUSTICE, at Union Hotel, GALESBURG ILL.

IMPORTED BELGIANS

I recently returned from Belgium with another importation of stallions and mares. I have over 40 head of big, drafty, heavy-boned stallions and mares that will be priced right. Farm near town. Write me, mentioning The Homestead.

R. F. FRENCH, INDEPENDENCE, IA

W. J. BUTLER

OTTAWA, ILL., Breeder of

Stooker's Stock Farm

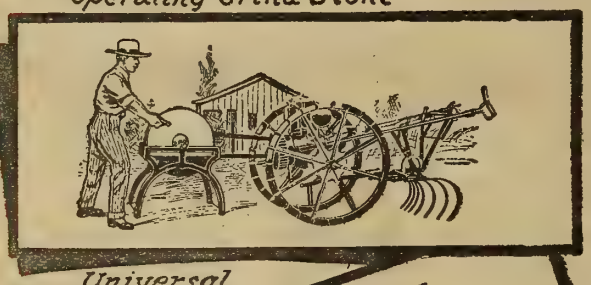
OFFERING just now some very choice Percherons. A pair young stallions and a few mares Write for full information. Address

F. A. STOOKER, - Dunbar, Nebraska.

This wonderful invention will revolutionize farm life

IT marks the beginning of a new era. Reduces farming to a scientific basis, increases the efficiency of your labor, swells your profits, saves time, saves trouble, saves money. Keeps the boys at home and makes the farm modern and automatic.

Universal Tractor operating Grind Stone



Universal Tractor operating Washer

Universal Tractor operating Cream Separator

HERE IT IS AT LAST,—the device you have been wanting for so many years! A machine that goes wherever it is wanted under its own power and that does the work of a stationary engine in addition to the work of a horse. The device that harrows your ground, drills, plants, weeds and *cultivates* your fields, saws your wood, pumps water, grinds your grain, chops your feed, runs your churns and separators, your washing machine and your electric generator; a machine that does in one hour the work that now requires half a day and does it better, easier and more economically, that costs little to operate and that costs nothing when not actually working,—that makes money for you while your horse is eating his head off in the barn. The

Universal Tractor

annihilates farm drudgery as the automobile has annihilated distances. It is the touring car of progressive farming. It multiplies the efficiency of farm labor as modern machinery has multiplied the efficiency of factory labor. It enables one man to do the work heretofore done by two. The only limit to its capacity is the capacity of the operators. With three shifts of drivers the Universal Tractor can work in the fields for twenty-four hours straightaway. Its total operative cost is trifling in comparison with the cost of the feed consumed by a horse.

The Universal Tractor is obedient to the touch of the thumb. It runs with uniform and unvarying speed according to *your* will and not at the caprice of your horse. One, two, three or four miles per hour exactly as you wish, the Universal Tractor maintains a perfectly uniform and unvarying rate of speed no matter how rough or uneven may be your fields.

If you want to cultivate close up to the rows of growing plants you can regulate the position of your shovels accordingly. If you want to straddle the rows you can do so without danger of injury to the plants such as is almost certain to occur when you do your cultivating by horse.

The Universal Tractor will do any work that a horse can do in cultivating your fields and do it much better, quicker, cheaper and easier. It will also operate any machinery that you can operate with any three to five horse power engine, and it requires no special skill to operate. It is so simple that a child can start it, regulate its speed or stop it without assistance and without danger. It is built as strong as a young locomotive and as accurately as a watch. It can not freeze up in the coldest winter weather. It requires little attention and it is so perfectly adjusted that it is not liable to get out of order. All parts are standardized and interchangeable and can be removed or replaced without the assistance of a mechanic.

Think what this will mean to you. Think of the time you will save, of the trouble and delays you will avoid. Here is a cultivator that runs itself, one that works without tiring, one that never needs to stop for water or feed like Old Dobbin, that maintains a uniform rate of speed, that you can guide to the accuracy of a hair's breadth, that has power to spare and that is always ready for work. Here is a harrow that works automatically,—a drill and seeder that does not depend upon any horse,—a weeder that will go through twelve acres of ground in less time than you now require to go through six acres with your horse-drawn weeder.

Here, in the same machine, is an automatic churning device, a motor for your separators, a power plant that will operate all your small machinery, one that will go to the place where the work is to be done instead of making you bring the work to it. And all this for a price that compares favorably with that of a high grade stationary engine capable of doing only the simplest kinds of work, and this only when the work is brought to the engine.

The Universal Tractor opens up to you, Mr. Farmer, an outlook of unlimited opportunity. No more delay cultivating your growing crops with a horse drawn cultivator. No tramping on the young plants, nibbling at the tops of the tender sprouts, no more lurching and plunging of the old horse as he starts up after pausing to shake off a horse fly. No more back breaking labor over the chopping box or the feed mill, no straining at the cider mill; no more hard drudgery for your wife at the separators and churns and washing machines.

With the Universal Tractor you will enter upon a better, easier, pleasanter mode of living because all your hard work will be made easy, your labor will return you a larger profit, and your sons and daughters will not want to leave the farm because farm life will be more pleasant and more profitable than city life can ever be.

This story of The Universal Tractor is too long to be told in a single advertisement. It is fascinating. It reads like a romance. Write today for the book "Farming by Motor." It is free. It tells you everything. Fill out the coupon and send it to us by return mail.

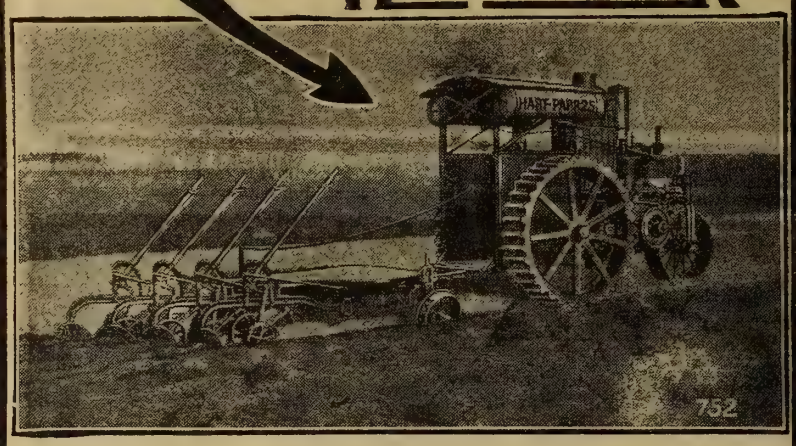
VOL. LVIII. NO. 9 DES MOINES, IOWA, FEBRUARY 27, 1913. WHOLE NO. 2890

25 Brake Horse Power Outfit

Here's a Small Tractor just like the one you've often wished you could find. It's a

HART-PARR
-OIL TRACTOR-



This addition to the long established and old reliable Hart-Parr line, is our answer to the constantly increasing demand for a medium power tractor. A tractor built especially for farms as small as 160 acres.

Many inexperienced builders have rushed pell-mell into the field with untried, untested small size tractors. Even with our many years of tractor building experience, we were not satisfied to do this. First, we gave long, careful thought to the power problems of the small farm. We studied the requirements from every angle. Then we designed and built this 25 B. H. P. tractor especially to meet these conditions. Next, we gave this tractor a thoro, searching shop and field test. Step by step, we modified and strengthened it. No guess work at any stage.

And now, that we ourselves are convinced that this new Twenty-five is right, we offer it to the farmer as the only small tractor that really is efficient, reliable and economical in every respect. It will prove a profitable investment on farms of 160 to 320 acres. And the price is within reach of the small farmer's pocket book.

The same general features of construction which have made our 30, 40 and 60 B. H. P. outfits so successful, are embodied in this new Hart-Parr model. It is built almost entirely of steel, thus insuring greatest strength with *light weight*. The drive wheels are equipt with our wonderful wave form lugs, making the tractor well fitted for work on soft soil.

In combination with the Hart-Parr-Sattley **Self-Lift Plow**, shown in the illustration, it forms a strictly *One-Man Outfit*. It will easily take the place of 10 sturdy horses and do the work better, quicker and cheaper. It has two working speeds—1.8 and 2.6 miles per hour. It uses ***cheapest kerosene*** for fuel at all loads, and is oil cooled.

Write today for illustrated circular fully decribing the important features of this new Hart-Parr Oil Tractor.

DRILL YOUR OATS—IT PAYS

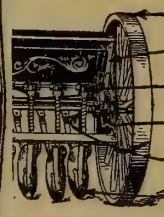
Illinois Experiment Station shows an average gain of 3.6 bushels per acre.

At Kansas Station they found a gain of 4 bushels per acre.

Iowa Station found a gain of over 9 bushels per acre.

Get this extra crop by using Single Disc Van Brunt Drill—the drill that will not choke in sticky, trashy ground. Guaranteed to make a good seed bed in any ground that can be seeded.

Here Are the Valuable Features—



- **Wheels always stand true**
- **Hopper trussed—don't sag**
- **Adjustable gate force feed**
- **Bearings extend under frame**
- **Adjustable spring pressure**
- **Every seed at bottom of furrow**

The Van Brunt adjustable gate force feed compels even seeding in any kind of ground without bunching or damaging the kernel.

Van Brunt Closed Delivery permits seed to drop into furrow when it is wide open. "It beats the dirt."

JOHN DEERE PLOW CO.
MOLINE, ILLINOIS

It is not an unusual record to saw 10 cords of wood on one gallon of gasoline with a Lauson Frost King Engine. We have records of far bigger runs, but we advertise only what can be done under almost any conditions with any of our Frost King Engines.

Get a Frost King rig and save money on wood sawing. Also saw wood for your neighbors and make money.

The Lauson Frost King
Gasoline Engines

Besides sawing, this engine can be used for pumping, grinding, cutting silage, baling, in fact, any work requiring power. With a Lauson Frost King Engine it is done at the lowest possible cost.

No Batteries.—The Lauson Gear-driven, Built-in Magneto entirely eliminates batteries and their expense. Throws a big hot spark in any weather, and cannot burn igniter points.

Starts Easily.—The Frost King starts on the magneto without turning over. Requires no cranking. Positively frost proof. Never overheats. Perfect cooling.

Takes Less Fuel and oil and delivers more power because of special feature and design. Replacements due to wear and breakage are all but eliminated by having the parts case-hardened or fitted with adjustments.

Perfect Balance.—Every part is accurately ground and fitted. Engine stands perfectly quiet even under full load—another proof of durability.

Satisfaction Guaranteed

Our guarantee is fair and honest. If the engine does not suit you, you don't keep it. Write today stating power required. We will send catalog and name of Lauson Dealer.

DES MOINES, IOWA, THURSDAY FEBRUARY 27, 1913.

A MODEL LIVE STOCK FARM

How the Noted Breeder of Percherons and Berkshires, Mr. W. S. Corsa, has Built up the Gregory Farm Until it Stands Today as an Object Lesson to All the Grain Belt.—*By George H. Dacy.*

ANYONE at all familiar with Percherons or Berkshires has heard of Mr. W. S. Corsa and his famous Gregory Farm. Hogs of the Masterpiece strain and horses that have been sired by the great Carnot predominate on this farm. Gregory Farm is deservedly famous, not only as a fine breeding farm, but also as a practical and profitable, everyday project. Any person with sufficient capital and time can develop good families of live stock where foundation of desirable type and quality is used. However, everyone cannot make a success of general farming as a side line to the breeding operations. Too many of our leading breeding farms are badly mismanaged when it comes down to profitable crop production and the home raising of the majority of the grain and roughage that is fed. In these respects Gregory Farm stands out as a model. A permanent system of agriculture is practiced; grains and hays are profitably raised and fed to the stock; economical substitution is practiced in compounding the various rations that are used on the place; the fertility of the soil is constantly on the upgrade; the time of the laborers is efficiently utilized to the best advantage; intensive business management is pursued in all the farming operations and the entire proposition is handled according to up-to-the-minute direction The farm includes 1,280 acres of fertile, rolling prairie soil. On the farm is raised all the feed, except rather small quantities of bran, middlings, oil meal and cottonseed meal that are purchased and bring added fertility to the soil. The barns and feeding yards are provided with concrete floors, so that all the manure produced on the place is conserved in good condition and returned to the fields in the best of shape for toning up the productivity of the soil.

TWO HUNDRED AND FIFTY PURE-BRED BERKSHIRES COMPOSE THE CORSA HERD; THE SWINE ARE RAISED UNDER NATURAL CONDITIONS.

A bumper manure pile annually accumulates from the live stock colony at Gregory Farm. One hundred pure-bred Jerseys, 100 pure-bred Percherons, 250 registered Berkshires and seventy-five pure-bred Shropshire sheep are maintained on the farm, and in the course of a year these animals yield a bumper supply of fertilizer. Enough manure is yearly produced to fertilize 200 acres of the farm with ten to fifteen tons of fertilizer per acre, so that every six years all the land is thoroughly manured. About 100 pounds of raw rock phosphate per acre has also been profitably used with the well-rotted manure. The nitrogen side of the fertility question is amply provided for in that each year about eighty acres of alfalfa and 160 acres of clover are cropped on the farm.

Where any indication of sourness or acidity of the soil is apparent two-ton applications of ground limestone per acre have advantageously corrected this trouble. In the main the stands of alfalfa at Gregory Farm are secured without inoculation. The major part of the land is in fine condition to develop a vigorous stand of the leguminous forage crop-de-luxe without any need for using bacteria-laden soil from an old alfalfa or clover field in order to inoculate the new fields. Formerly the alfalfa crop was always sown without a nurse crop, but of late good results have obtained where bearded barley was seeded in conjunction with the legume. The applications of lime invariably seem to exert a beneficial effect on the black soil of these rolling prairies. Three to four cuttings and from four to five tons of fine quality hay per acre are secured each year from the alfalfa fields. In addition to playing square with Mother Earth from a fertility standpoint Mr. Corsa practices an efficient rotation of crops which features the pursuit of intensive tillage and the use of the best quality pedigree seed of the high-producing strains. Corn, clover, alfalfa and the small grains are grown, while about 350 acres are annually devoted to blue-grass, clover and mixed pasture. As an indication of the remarkable fertility of the black loam soil and as a testimonial to the efficient method of fertilization that is followed the crop yields are of particular interest. Three hundred acres of corn annually average in the neighborhood of seventy-five bushels to the acre. Recently one sixty-acre field produced 100 bushels of excellent quality corn per acre. Fertility maintenance and pure-bred seed undoubtedly effect an increase of 30 or 40 per cent in the acreage

(Continued on page 40)

CARNOT, THE $10,000 PERCHERON STALLION AT GREGORY FARM, WAS GRAND CHAMPION OF ENGLAND, FRANCE AND AMERICA IN 1910—A BUNCH OF HIS COLTS SHOWN ON THE RIGHT.

INCREASED YIELD FROM TESTED CORN.

Some interesting data is given in a bulletin recently prepared by Prof. H. D. Hughes, of the Iowa Experiment Station, relating to the matter of testing seed corn. Something like 45,000 ear-test readings were made by Professor Hughes during 1910 and 1911 and the bulletin referred to gives in detail the results of this extensive experimentation.

It was clearly demonstrated that the work of testing the seed corn was in every case very profitable, the actual planting results showing that no other farm practice will give so great returns in dollars and cents as will be returned from the labor involved in testing seed corn. In 1910 the untested corn gave a stand of 50.5 per cent and a yield of 55.5 bushels per acre while good, sound tested corn gave a stand of 72.3 per cent and a yield of 75.1 bushels per acre. Here was a gain of 19.6 bushels in favor of the tested seed. The actual cost per acre of testing the seed was thirty-five cents. In 1911 the untested seed gave a stand of 52 per cent and a yield of 35.6 bushels per acre while the sound tested ears gave a stand of 73.9 per cent and a yield of 45.7 per acre.

The results obtained at the station correspond very closely with the field tests made on various demonstration farms throughout the state of Iowa. In Cerro Gordo county, for instance, samples from seventy-three farmers were planted. The five best yielded 61.1 bushels per acre while the five poorest yielded only 39.8 bushels per acre. This difference was almost entirely due to the difference in vitality as shown by the percentage of stand and germination test.

It is shown in these experiments that the increased yield is not always proportionate to the percentage of stand, but the results on the whole show that the best stand of corn gives the best yield per acre. For instance, during 1910 a stand of 54 per cent gave a yield of sixty-three bushels per acre; 65 per cent, seventy-one bushels; 74 per cent, seventy-eight bushels, and 84 per cent, eighty-three bushels per acre.

It is not uncommon to find instances where men are satisfied with half a stand of corn, their belief being that in the case of a dry year as large a yield will be produced as if a full stand were obtained. While it is possible that conditions might be found where this result would obtain, yet, as said before, the extensive experiments conducted by Professor Hughes indicate that on the average the most perfect stand gives the largest yield. This taken in conjunction with the fact that seed corn can be tested for about thirty-five cents per acre should lead every corn grower to the conclusion that he cannot afford to plant anything but tested seed.

IN DOLLARS AND SENSE.

In this enlightened day and age it is hardly necessary again to point out the advantages of good roads, not only from a dollar and cents standpoint, but from an educational and aesthetic standpoint as well. We cannot refrain, however, from calling attention to one or two pertinent facts which have been brought to light during the last week. The United States office of public roads has issued some figures to illustrate its declaration that land values increase immediately when roads are improved. A farmer in Lee county, Virginia, owned 100 acres, which he offered to sell for $1,800. The road through the land was improved in 1908 and the farmer opposed the improvement. Since its completion, however, he has refused $3,000 for the land. On the same road there is a tract of 3,000 acres, supposed to have been sold for $6,000. A dispute arose as to whether the sale had been consummated. The supposed purchaser refused to take the contract and the owner threatened to sue. After the road was improved the same tract was sold for $9,000 to the original purchaser, without any additions or improvements on the land for which he previously had declined to pay $6,000.

From the other standpoint the set of resolutions adopted by a good roads convention in Illinois is of interest:

> Improved roads mean better schools and larger attendance, better health and quicker medical attention, better farms and more cultivated land, better crops and cheaper transportation, better economic conditions and less isolation, better church attendance and better citizens, better postal service and closer friends, better business and more consumers, better industries and more employment, a better state and a better nation.

The road question is a perennial one, but there is no denying that there is more interest and discussion this year than ever before, thanks largely to the agitation in the legislatures of most of the grain-belt states for remedial action which will give the people the relief for which they have long been waiting.

CROPS FOR SOD LAND.

An Iowa subscriber, Mr. Ira Lancaster, asks for information concerning the best crop to sow on sod ground that was plowed last September. The sward in this case was prairie grass mixed with a little tame grass. His desire is to use a crop that will rot the ground quickly so that the grass will be destroyed and the soil brought into ideal shape for future tillage.

Not knowing the extent to which this soil decomposed during the fall months it is difficult to give unconditional advice. When growth starts in the spring if the grass appears to well killed cut corn ought to do fairly well and possibly it will be the most profitable crop that can be used. It should be planted very late, however, because in ground like this cut worms are apt to do considerable damage.

Possibly the most ideal crop to be grown under conditions of this character is flax. One crop of flax is almost as good as a summer fallow as a means of fitting the soil for future crops and it may be seeded during the interim between corn planting and corn cultivation. It should be sown at the rate of two or three pecks per acre.

If only a small area is involved ground of this character can often be used to a great advantage in growing millet or sorghum. In this case the land may be plowed lightly in May or early in June and either of these crops sown with every expectation of accomplishing two things, namely, rotting thoroughly the sod and secondly, obtaining a very large yield of good hay or fodder. In the case of millet we would advise using about three pecks of seed per acre whereas if cane is grown sixty or eighty pounds of seed per acre should be sown.

WHERE THE PASTURE AREA IS SHORT.

In certain parts of the corn belt poor results have followed the attempt to obtain a stand of grass for three years in succession. A subscriber from Fremont county, Iowa, says that he seeded a large acreage of timothy and clover in 1910, 1911 and 1912 and as a result not a spear of either clover or timothy is alive today. As the outcome of this he is short of pasture and asks for information relating to the matter of obtaining a quick pasture for the coming season.

As clover and timothy are both slow growers they cannot be depended upon to furnish good grazing until the fall of the same year that they are seeded. This being the case we are obliged to fall back on the cereals for pasture during the fore part of the season. A mixture of oats and barley or oats, wheat and barley seeded thickly will furnish a great deal of good feed for a considerable period of time. If in addition to the mixture of small grain four quarts of timothy and four quarts of clover seed are used per acre there is a reasonable possibility that the latter will make sufficient growth so that by the first of September they will furnish considerable feed. It must be remembered that the small grain will mature just as if it were not pastured, though pasturing will somewhat delay the date of maturity. By sowing late varieties the small grain may furnish fairly good grazing well on into August or probably up to the first of September.

We have had good success in sowing fall rye in the spring. It is a hardy crop and may be seeded just as soon as the ground is in condition to work without puddling, and fall rye will remain green a little longer than will the spring cereals. Five or six pecks per acre will answer every purpose and if the seed can be obtained at anything like a reasonable price there need be no hesitation about using it because this plan has been well tried out.

HEALTH TO THE YOUNG PIGS.

A Kansas subscriber calls attention to a few factors that should be kept in mind by those who expect to raise a large percentage of strong pigs per sow this spring. Among other things he says:

> Advancing hog prices have put everyone in a different frame of mind concerning the spring hog crop, and no doubt everyone will make the greatest possible effort to save all pigs that farrow and to take good care of them. In other words, there is a feeling that "pigs is pigs," and more than the usual effort will likely be made to save all possible.
>
> Aside from weather effect, the greatest loss of young pigs comes about through a sow smothering or laying on her pigs before they are large and strong enough to work their way out of such difficulties. As sows grow old they are apt to become more and more indifferent to the outcry of their young and to pay no attention when a pig is squealing for dear life. The better way is to safeguard against this loss by putting a rail all around the pen, high enough from the floor so as to enable the litter to lie beneath, and strong enough to guard the sow away from the sides of the pen. More pigs are crushed to death between the sides of the pen and the body of the sow than in any other way, and these railings or guards will largely prevent such loss.
>
> Another way of helping along the litter average is by feeding the sow right for some time before farrowing. A sow fed on corn, with water for drink, is liable to have trouble at farrowing time, especially if she is a gilt. A little shorts slop, given once a day, puts the sow in fine condition for farrowing, and will greatly diminish the number of dead pigs found in the nest, or that must even be taken from the sow. Many gilts that live on a ration of corn and water die at farrowing time. Fat at farrowing time is very much against a gilt, and is wholly against the saving of a good-sized litter of thrifty pigs, and it sometimes works very much against the saving of the sow.

Too much emphasis cannot be placed on the importance of using something in conjunction with corn for the brood sow. Where shorts are not used excellent results will be obtained from feeding one pound of oilmeal or tankage to eight or ten pounds of corn. The addition of either one of these protein-carrying bodies for a few weeks previous to farrowing time make the difference between weak and strong litters. We could cite instances where year after year men have been raising an average of three or four pigs per sow as the result of straight corn feeding. On the other hand, our most successful breeders average six or seven pigs per sow and one instance has been called to our attention where for a series of years one breeder raised and fitted for market an average of eight pigs per litter. While a number of important factors enter into the proposition yet the main one involves the feeding of a balanced ration. While of almost equal importance is the question of compulsory exercise. There should not be a single day's delay after the advice is read in turning the sows away from their sleeping quarters in the daytime and this should be kept up every day unless during periods of severe storms.

MUST RAISE OUR OWN MEAT SUPPLY.

Never in the history of our country, according to Abraham Renick, general manager of the American Short-horn Breeders' Association, did the future hold out such prospects as at present for those engaged in the production of prime beef.

In support of his claims he has lately pointed out that Canada, with a very short grazing season, extreme winters and the lack of corn, can never furnish us or interfere with our home market. Mexico, practically a barren waste from a revolution that has destroyed her cattle industry and is still in progress, is not holding out any hope for relief. Argentina can find a more profitable market for her surplus meat in European markets, and if this nation is to have more beef it must be bred and matured in the great corn and grain-belt states.

As well as an opportunity there is, Mr. Renick believes, a necessity for farmers to turn more and more to stock raising. Under present conditions the overhead expenses of operating a farm, the scarcity and high price of farm labor make it necessary, he declares, that our farms yield a greater gross income. To accomplish this result it is necessary to both practice economy and introduce better methods in farming.

The average man who lives on and operates a farm should not, in the opinion of this experienced stockman, be designated as a farmer, but rather as a land pirate or soil miner; as a land pirate he is transitory, he is there for the purpose of getting what he can from the soil without regard to the future and the natural consequence of his acts. When the farm fails to yield a revenue he sells and moves to another. The miner plows and tills the crops that he can sell to the greatest advantage off the farm, never thinking or caring for the future or the advantages of rotating, the growing of clover and turning the crop back to the hungry soil or the feeding of all crops back on the farm which produced them. The only way to do this is breed and feed live stock. Statistical information does not make the impression usually that it should, and we often fail to appreciate the full meaning and importance of a few figures when they are merely to express a per cent of increase or decrease of a certain product. This, he believes, is true regarding the statistics that are now being so freely used in expressing the great shortage in beef cattle. When it is said that our population has increased 26 per cent in the last ten years and that we only have four-fifths as many cattle as we had ten years ago, or a loss of 20 per cent, the real significance of these figures is not appreciated. With an estimated immigration of 1,400,000 people to our shores in 1913, and estimating our natural increase 600,000 more, what provisions are the farmers making to feed this additional 2,000,000 people?

AN EXCEPTIONAL OFFER.

An opportunity such as given by our exceptional Red Letter Subscription Offer is not frequently encountered. Here are five of the best, most interesting and most practical periodicals published, of value to each and every member of the farm household, obtainable at almost one-half the regular subscription price. By remitting $1.25 to The Iowa Homestead, Des Moines, Iowa, we will see that you receive a full years' subscription to each of these five papers: The Iowa Homestead, Kimball's Dairy Farmer, Woman's World, Kansas City Weekly Star and People's Popular Monthly. This is the time of year when the largest and best numbers of each of these five papers are being issued and we urge upon all who intend availing themselves of this opportunity to remit at once, in order that they may secure these large numbers and have a full year's uninterrupted service.

JOINT OWNERSHIP OF FARM IMPLEMENTS.

An Indiana subscriber, W. F. Purduo, outlines a plan by which men who are unable to bear the expense of owning implements outright might solve their problem by entering into a partnership with neighbors who are similarly situated. On this subject Mr. Purdue says:

It is to the small farmer that the plan of joint ownership of some of the farm implements appeals especially, offering as it does a method of lessening the expense annually imposed by having to buy new tools. With the improved methods of farming that now prevail, all the tools required to run even a small farm represent a large investment of money. It is on the small farmer that the greatest expense, proportionally, for machinery falls. The man with 160 acres needs but few more implements to carry on his farming operations than does his neighbor who has perhaps only eighty acres. The former probably has an extra plow and cultivator, but otherwise he can get along all right with the tools needed to run the eighty-acre place.

But to insure always getting his crops in on time and caring for them properly at the right time, the small farmer must have a complete set of farming tools, even though he himself does not use some of the tools more than two or three days in the year. The rest of the year they are either taking up barn room or, if left outdoors, are depreciating in value as rapidly as are the same tools of a neighbor who uses them several times as much.

Therefore, why not go into partnership with a neighbor who has about the same sized farm, and thus has about an equal amount of use for an implement, and make one implement serve two owners. Each can save some storage room thereby as well as money. Two farmers situated side by side seldom want to plant their corn or harvest their grain at the same time and it is the same with other work for which implements are used. By planning together, each can generally so arrange his work as not to interfere with the other. Not only the corn planter and binder, but the mower, rake, hay loader, fanning mill, grain drill, manure spreader and butchering tools may be owned jointly between two farmers.

Always, however, in order that partnerships of this nature may not prove unsatisfactory to one of the parties or lead to any ill feeling between the men, care must be used to choose the right kind of partner, and then we must resolve that we will try to be the right kind of partner for the other fellow. Each joint owner of an implement should endeavor to take the best possible care of any tool while it is in his possession and, as even two good machinists are generally unequally hard on the same machine, there should be an agreement as to whether repairs are to be paid for jointly or by the partner responsible for the breakage. There should also be an understanding as to which one is to store the implement when it is not in use and also in regard to lending or renting it to other farmers of the neighborhood. Then all agreements made must be rigidly adhered to by both parties if pleasant relations are to be sustained. Under these conditions the plan of joint ownership has much to commend it.

There is no doubt but what this plan could be carried out much more extensively than is the case at present if men would adopt a given-and-take policy. It is true that every man would prefer to be independent in matters of this kind, but in the case of small farms it is quite possible to become what might be called implement poor. There is nothing visionary about the plan of joint ownership of implements because in most every neighborhood there can be found instances where it is carried out in an ideal way. We believe that in the interests of economy in production the plan could be much more widely adopted than it is at the present time.

BELIEVES IN LESS GRAIN AND MORE LIVE STOCK.

A Nebraska subscriber, A. F. Danielson, calls attention to the blunder that too many farmers are making in the effort to grow a large acreage of grain. He says that while we raised about 1,000,000,000 bushels of grain in 1912 than we did in 1911 yet the larger crop is worth about $24,000,000 less than the smaller one. According to Mr. Danielson the average yield of corn in Nebraska is twenty-seven bushels per acre, wheat sixteen and oats twenty-three bushels. These yields will not pay interest on the present value of land and therefore the farmer must change his policy. On this point he says:

We have followed grain raising too long, especially wheat. We need to change our method of farming very much. We should put half of our farms into meadows and produce more horses, beef, butter, cheese, hams and bacons, and in a very few years we will raise as much grain on half of our ground as we are doing now on all of it; besides our land will be getting richer and we will be making more money.

More and more men are coming to believe in diversified agriculture, which involves the raising of live stock to consume most of the grain and roughage produced. We are free to admit that the plan of marketing grain direct may in the beginning seem to carry with it a great degree of prosperity, but it must be remembered that year by year the crops are lessened, this taking place in many instances in the face of land rising in value. On the other hand, where live stock of some sort is utilized as a means of marketing grain and roughage the soil continually improves and even though only market prices for grain are realized in the sale of live stock the enrichment of the soil alone is sufficient to offset the extra labor involved. Admitting as we do that the violent fluctuation in live stock values has much to do with discouraging men who might otherwise be engaged in live stock raising, yet it cannot be denied that the most marked degree of prosperity taking the matter over a series of years will always be found on those farms which maintain a constant policy of live stock raising. To put it in another form it could be easily proven that on the whole live stock farmers are much more prosperous than grain farmers and so long as this holds true we shall only be doing our plain duty when we preach in an orthodox way that gospel of stock raising.

GOVERNMENT FIGHTS HOG CHOLERA.

Senator Cummins, of Iowa, has offered an amendment to the agricultural appropriation bill proposing a comprehensive state and federal campaign for the elimination of hog cholera. Senator Cummins asks for an appropriation for $100,000, with which to enable the federal government to co-operate with the state governments in checking the ravages of this disease, which has already wrought such an immense loss.

In a semi-official letter recently Secretary Wilson, of the department of agriculture, declared that the federal government was powerless to help the state governments in this important matter. Senator Cummins' amendment is designed to make it possible for the government to give the co-operation which the department of agriculture is willing and anxious to give, but which it is prevented from giving at present by lack of funds. Federal experts have already been watching the progress of the disease and making an investigation which will enable them to take hold of the matter promptly once the necessary authorization is given.

Because of being the leading hog state in the Union and because of the extent to which hog cholera has been prevalent within the last year, Iowa will be one of the first states in which the federal aid will be forthcoming. Dean Curtiss, of the Iowa Experiment Station, following a recent visit to Washington made this announcement:

Congress is expected to make appropriation for the bureau of animal industry to come into a number of states to demonstrate how hog cholera may be eradicated by the serum method. Because of its large hog-producing industry, Iowa naturally will be one of the first states chosen for the demonstration. The bureau experts will work in a limited territory, covering several counties They will locate there, encourage general preventive measures and watch closely for signs of the disease. The men who have made a study of hog cholera for the bureau of animal industry are agreed that this way is the only way of combatting it successfully. It must be eradicated at the very beginning, before it has spread over a great territory. When cholera once has a big start and has covered a large portion of the state, it is practically impossible to provide enough serum or to employ enough competent men to fight it satisfactorily.

With two bills already introduced in the Iowa legislature providing for state appropriation and with the federal government proposing to come to the relief in the near future, there seems every prospect of the necessary remedial measures being secured, without delay, for the checking of this disease which has caused such loss and worry among the live stock men of the grain belt.

Use the thermometer in the dairy —summer and winter.

STUDYING THE BULLETINS.

A plea for the reading of bulletins and kindred agricultural literature, rather than a too close attention to ordinary text-books designed for the city boy instead of the farm boy, is made by Prof. L. W. Chase, of the State College of Agriculture of Nebraska, who says:

The farm is one of the greatest laboratories we have. It contains the physics laboratory, the soil laboratory, the rural architecture laboratory, the bacteriological laboratory, the botany laboratory, the topographical laboratory, the psychological laboratory, the crop laboratory, the engineering laboratory, and many others.

When the farmer is taught to overlook the drudgery of the dust which will blow in his face a few days of the year and to study the various courses which he might by reading the agricultural papers, the states' bulletins and the magazine articles, as well as a text-book and applying them to his various laboratories, he will see life in the country different from the way he sees it now.

Second, I would consider that the text-book system is entirely wrong for rural population. Our arithmetics are such that instead of dealing with farming and live stock and such as that they deal largely with stocks and bonds—a feature which none of the pupils will ever have an opportunity to work with.

At one time the four elements of a good country school education were reading, writing, spelling and arithmetic. Writing is not a fundamental element in our later schools. A great many farmers are now owning their own typewriters, hence, instead of using so much time in teaching writing, why not use it for agricultural questions? Change our text-books so that each pupil may see the beauty of his own surroundings.

Another feature which should be dwelt upon in the country schools is that the country life is no harder than the city life, in fact, is not nearly as hard.

Many of the rural schools in the grain belt are finding it advantageous to subscribe and to study daily newspapers and farm papers, the pupils using these pediodicals not only for the practical instruction to be derived therefrom, but as the subject matter of reading and grammar lessons, relegating the old text-books to second place. There is a general tendency toward making school instruction more practical than it was a few years ago and so far as the rural schools are concerned the plan of Professor Chase is an excellent one. Newspaper English is not always the king's English in its purest form, but a pupil who goes out from the schoolhouse well posted on current affairs, knowing to what bulletin or farm paper to turn for practical information, is far more likely to succeed than the one who is able, in a parrot-like manner, to name the principal products of Bulgaria and the boundaries of Baluchistan. The successful text-books of tomorrow will be those which consider the farm child fully as much as the city child, and present the problems in a form which will appeal because of its everyday nature and practical significance.

FEDERAL AID FOR ROADS.

The question of federal aid for good roads looms large. A joint committee of the senate and house, with Senator Bourne, Oregon, (the father of the parcel post bill) chairman, is now investigating the entire subject with every likelihood of a report being submitted favorable to the general project. The main subject under investigation at present is the manner in which federal aid when finally forthcoming shall be distributed, whether to the states according to their population, their area or the mileage of their highways. In a recent magazine article Senator Bourne expressed himself as favorable to a plan which shall combine all three of these elements, inasmuch as it would not be fair to grant more aid to Rhode Island, for instance, than to Iowa, although the population of the former state is much larger than that of the latter; or more aid to Nevada, for instance, than to Nebraska, although the former state is much larger in area than the latter; or to some state which has already solved the good roads problem by thousands of miles of good roads, leaving a state with impassable highways suffering because of lack of the necessary aid.

With federal aid and state aid both imminent, an impetus is being given to road building greater than ever before. The statement is made that $500,000 a day is being spent for good roads in this country, but the general consensus of opinion is that until within the last year or two results commensurate with this immense expenditure have not been secured. There is a feeling all over the country that road building must be made as systematic and as scientific as railroad building, hence the movement for a state highway commission with plenary powers and scientific supervision by expert engineers. Congress has already appropriated $500,000, to be distributed $10,000 to each state for improvement of stretches of road over which rural free deliveries operate regularly. The results of this appropriation will go a long way to show whether or not the federal government will be justified in making still greater appropriations and in going still more extensively into this important subject. The secretary of agriculture and the postmaster-general have both been ordered to loan their influence to the investigation, to the end that actual facts may be secured so that road building may no longer be theoretical, but may at last take on that practical element which it must have in order to secure the best results.

A RIVAL OF KAFIR CORN.

A new candidate for the agricultural championship has appeared in the dry belt, says the Kansas City Times. Feterita has thrown its hat into the ring—or head, more properly speaking, for it is the feterita head which determines the yield to the acre, but the yield is what counts after the sun has burned, and the hot winds scorched, the growing vegetation in the region of deficient rainfall.

Feterita is another contender from Africa, but, far from longing to see it put down and out for the count, the farmers in the short country are spurring it on to greater effort.

Feterita, a nonsaccharine sorghum, is a brother of kafir corn and milo maize. It was brought by the department of agriculture a few years ago from the African Sudan, near the burning Sahara. The new product produces well at experiment stations in Texas, Oklahoma and Western Kansas, and last season several farmers who grew the crop report phenomenal yields. W. A. Taylor, of Lone Wolf, Okla., in a report to the Star, says feterita on his farm threshed eighty bushels to the acre. Growing on the same land, beside the feterita, was kafir, which yielded fifty-three bushels per acre, and milo maize, which produced sixty bushels per acre. "Feterita," says Mr. Taylor, "will mature in seventy days and will stand the drouth better than either milo or kafir corn."

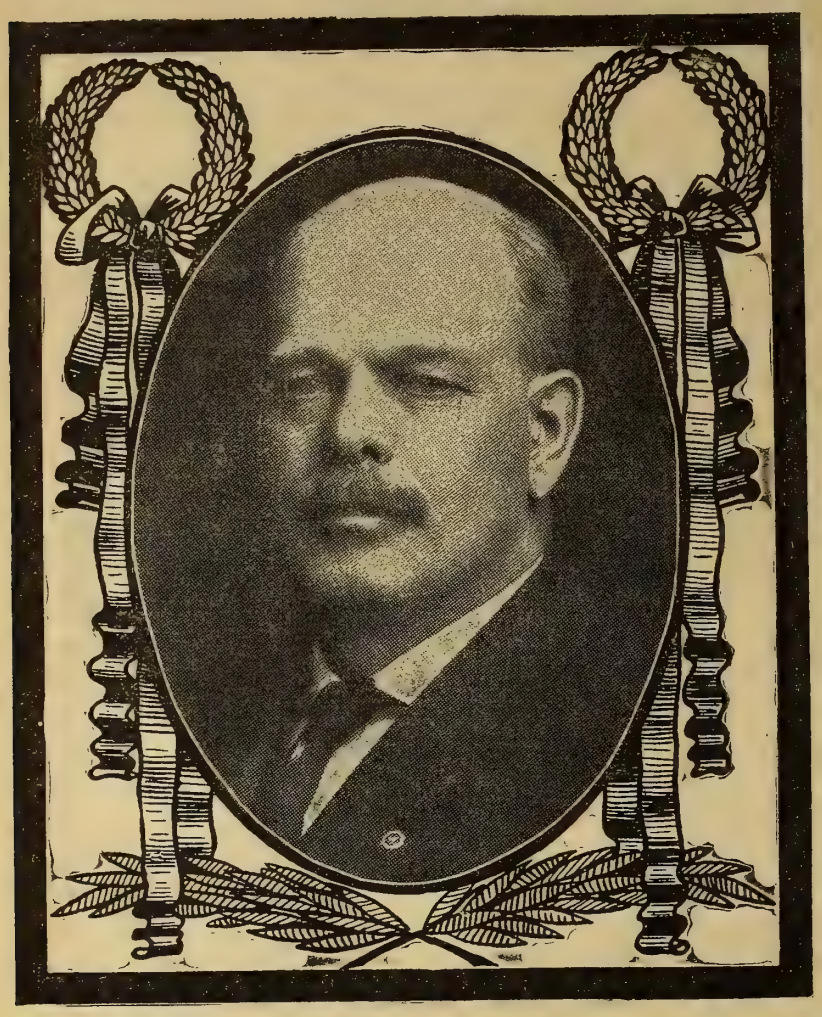
Experiments at the Oklahoma Agricultural College indicate that feterita is not superior to kafir corn and milo, but the college desires to conduct further experiments before making positive statements.

SWISS SCHOOL SYSTEM.

One or two peculiarities, as compared to the schools of the United States, are to be noted in the educational system of Switzerland. In the first place when a teacher is engaged for a position it is for life or a long term of years. He settles down with the people whose children he teaches and generally intends to make that particular job his life's work. The record for continued service is held by a teacher in Thurgau, who has occupied the same position for sixty-five years says a daily newspaper. Another example is given where a teacher has held his position for twenty-four years, and his father held the same position for thirty-five years before him.

W. K. Tate, supervisor of rural schools in South Carolina, who has been investigating the Swiss schools, adds to the above information the following paragraph:

"One of the most attractive features of the Swiss schools is the cordial personal relation that exists between teacher and pupil. There is nothing of the military in the discipline of the school; no lining up; no marching to classes. When the children go to the class room they shake hands with the teacher, greeting him as if they had not seen him for a long time and are really glad to see him. The whole relation is one of charming naturalness and kindliness on both sides."



THE LATE GEORGE P. BELLOWS.

IN MEMORIAM.

DIED, near Maryville, Missouri, Monday afternoon, February 17, 1913, as the result of an automobile accident, George Purdy Bellows, aged 50 years, 4 months and 18 days. The funeral services were held at the family home, in Maryville, Thursday afternoon, February 20, in the presence of a large concourse of friends from Missouri and adjoining states, the services being conducted by Rev. Gilbert S. Cox, pastor of the First Methodist church, of which the deceased was a member. Interment was made in Miriam cemetery.

I HAVE been called upon during the past week to perform one of the saddest duties of my life: To assist in consigning to its last resting place the body of a friend whom I loved as a brother, a man like unto whom another does not exist, a veritable "prince in Israel," George P. Bellows. This friend and I had been comrades in adversity and in prosperity; we knew each other as only men can who have struggled and suffered and conquered together. The world had yet much need of this friend, but, of a sudden, in the twinkling of an eye, he who had been so full of life and vigor was only inanimate clay. As we stood, with bared and bowed heads, watching the "house of man's soul" lowered into the grave there came upon me an overpowering sadness and loneliness. And yet I know that in the blitheness of his unconquerable spirit he who has gone on before would not have us mourn unduly nor surrender the good fight, for it is part of the day's work, and night comes on apace for us all.

If ever a man were an aid, a comrade and an inspiration to another, George Bellows was that, and more, to me. We linked our fortunes together twenty years ago the first of this coming August. We came together with mutual interests. In our boyhood days we had lived in adjoining counties. We knew what it was to be boys on the farm, to scan the horizon just beyond the cornfields for the bigger things of which we fondly dreamed. When, later, we came together in an association and a friendship tested by many years, the dream-days were past; we were face to face with the stern realities of every-day life and work. It was the formative period of present-day agricultural journalism. The struggle which resulted in the survival of the fittest was a strenuous one. George Bellows and I joined hands to carry on a work in which my lamented comrade never lost hope or heart to the very day that his body, cold in death, was found under the automobile which had become an engine of destruction. The agricultural prosperity of the grain belt has advanced by leaps and bounds. Agricultural journalism has come to occupy a plane higher even than the one of which we dreamed twenty years ago, proving its usefulness and value in a thousand unexpected ways. If it has been given to me to bear a part in these victories, alongside my dear friend, I am truly grateful, repaid beyond the power of words to express. I know that George Bellows bore a part and a big one; the work wrought by his hands will stand for many a long day.

George Bellows was a many-sided man. It is given to many men to be successful at some one thing, to few to be successful at many things. Genius has been defined as knowing what you can do best, doing that and nothing else. George Bellows more nearly measured up to that other standard of genius: An infinite capacity for taking pains. Whatever he did he did well. He left no little details unattended to. With a breadth of vision which swept the whole horizon he did not overlook the little things at his feet. His outlook was world-wide, yet he went about the thousand and one little details of every-day life as though nothing were half so important or far reaching. He set the pace in agricultural journalism, as a live stock field man, in a day when the profession was young and untried, when success or failure throughout all the future depended on the type and the acts of the men blazing the new field. Throughout the eleven years when we were associated together in business the counsel of no man was more often sought by me, nor more profitably followed, than that of George Bellows. No man could have rendered more faithful, loyal service. Hard headed and practical, his advice was that of a sage, a friend, a comrade. Together we weathered financial storm and when the haven toward which we had steered, through many a heavy sea, was at last safely reached, it was the hand of George Bellows at the wheel which had aided and sustained mine, which had brought the craft safe through to port.

George Bellows left The Homestead to enter upon a career as a live stock auctioneer. The intervening nine years tested him in the fire of responsibility. He stood at the head of his profession. His word was as good as his bond. Men trusted him as they would a brother, a father. Practicing the square deal to patrons and bidders alike, he hewed close to the line of absolute integrity; respected by all, his life is a priceless heritage to those he leaves behind.

The circumference of his life still widens. He was a live stock breeder, with a specialty for Short-horns, second to none in his devotion to live stock progress. He knew the value of blood and of breeding, whether it be in man or in beast. He devoted himself to developing a breed of stock that makes men richer, prouder of their profession, bigger factors in making America first in agriculture and the kindred arts. He left his imprint on hundreds of grazing herds. Men who have never looked upon his face are looking upon his handiwork today on a thousand hills and pronouncing it good. Born on a farm, educated at the State Agricultural College, teaching a country school, living practically all his life on farms or among those who till them, he knew the innumerable problems which beset the farmer and set himself to solving them, with a sagacity, a perspicacity and an energy never equaled. The record of such a man is a monument that will always endure.

I am not alone in such high tribute. I have before me the tributes of two of Mr. Bellows' associates, men who knew him through their connection with The Homestead in a capacity the same as his, who have been his comrades in hundreds of show rings and sales rings, whose heartfelt words of praise echo that which I would say. Mr. M. T. White, whose association with Mr. Bellows and myself is a long record of pleasant and congenial service, writes:

Having associated with George Bellows almost continually for the past ten or twelve years, I am in a position to speak of his splendid qualities as a man, a husband and a father. The world does not make enough of his kind. He was a man of lofty ideals and high purposes, and yet no man was more democratic in his bearing. Above all things, he was fair in his dealings both to buyer and seller and no man ever had occasion to complain of the treatment accorded him. His like will not soon be seen again, if ever, but his memory will long remain as an inspiration to others.

With every word of Mr. White's heartfelt tribute I thoroughly agree, as I do, also, with those equally sincere words of another Homestead representative, Mr. A. T. Cole, who, because of his intimate acquaintanceship, is amply qualified to speak for hundreds of grain-belt farmers whose hearts are deeply touched by Mr. Bellows' death. Mr. Cole writes:

During the past twenty-five years George Bellows has been a welcome and an honored guest in the homes of hundreds of the grain belt's best farmers and live stock men. Not one of them but felt honored to have George Bellows enter his home. His cheering words, his sunny disposition, his bright optimism combined to make him welcomed by every member of the household. The eyes of hundreds of farmers and stockmen will moisten with tears as they learn that he will be with them no more. But his memory will linger many years and men will be better because he lived and moved among them.

Our friend and comrade has passed on. He lived the good life and when he went a great oak fell, leaving at its base the fragrant flowers of memory which shall forever endure. There was no time to say good-bye; there was no parting message. And yet George Bellows did leave a message, and it is this: The man who does his work well, whatever it is, wherever it leads him, measures up to the standard of true nobility, and when he passes becomes an inspiration to countless thousands, guiding them over rough places, cheering them when they falter, sustaining them when they fall. Such a man does not die; he passes on ahead a little while, but just over the next hilltop we shall see him and greet him again: Comrade and friend:

There is no death! What seems so is transition,
This life of mortal breath
Is but a suburb of the life elysian
Whose portal we call death.

In this spirit, we say of George Bellows: He is gone, but he is still with us, for his record and his memory remain, a blessed, imperishable heritage of all the future.

JAMES M. PIERCE,
Publisher The Iowa Homestead.

A BOOK OF FIELD CROPS.

Two talented scientists have recently combined their efforts in the preparation of a useful book on "Field Crops." They are Prof. A. D. Wilson, superintendent of the institutes and agricultural extention of Minnesota University, and Prof. C. W. Warburton, agronomist of the United States Department of Agriculture. This book is designed primarily to use as a text in secondary schools and wherever agriculture is taught although it will also be of interest to farmers and to those who desire to become farmers. Some comprehension of the field covered by this work may be obtained by a perusal of the chapter headings which are: Classification of Field Crops, The Growth of Plants, Corn, Wheat, Oats, Barley, Rye, Flax, Miscellaneous Grain Crops, The Making of a Meadow, Hay and Hay-Making, Pastures, The Grasses, Perennial Grasses, Annual Forage Grasses, What Legumes Are, The Clovers, Alfalfa, Miscellaneous Legumes, Root Crops, Root and Tuber Food Crops, Sugar Plants, Fiber Plants, Tobacco, Rotation of Crops, and Weeds.

We are in position to supply this book to our readers at the regular publisher's price, namely $1.25.

A BULLETIN ON SEED CORN TESTING.

Every farmer who grows corn will find reading of interest and value in Bulletin 135, "The Germination Test of Seed Corn," just issued by the Iowa Agricultural Experiment Station for free distribution. It is based on two years of careful work with the germination test in which Prof. H. D. Hughes, the author, and his helpers made more than 45,000 ear test readings. Many hundreds of ears of corn were tested in thirteen different testers for the sake of comparing their merit; these ears were then planted in the field so that the value of testing might be determined by actual stand and yield per acre. Nowhere else has so thorough work been carried on and published. The results show conclusively the value of the germination test, they show further that the homemade testers like the rag doll and the saw dust box are good enough. Professor Hughes also brings out some interesting facts about the much discussed "weak kernel" and shows what it does when planted. This bulletin, comprising eighty pages, is the most complete published by any experiment station on the germination test and may be had free by writing to the Bulletin Section of the Iowa Agricultural Experiment Station, Ames, Iowa.

INCREASING THE BEE OUTPUT.

The University of Pennsylvania is trying to have bees make money in winter. Despite all the old theories about bees and the fact that they are the best known of the hibernating insects, science demands that they shall be more profitable and work the year around.

To experiment on this plan, the university engaged Professor Phillips, of the department of agriculture at Washington, who has taken up his work at the laboratories in Philadelphia.

Professor Phillips said that they had not progressed far enough to prove whether it would be a profitable side line for the average housekeeper or not. He is attempting to learn if it will not be productive of more real value to the small home owner than the raising of poultry.

The fact that in the cold weather the bee has no food to keep it at work is given as the reason for its sleepiness, and to solve this problem Professor Phillips is feeding the bees at the university apiary with all sorts of mixed alfalfa and clover and other honey-making products, and some of them have actually been at work in the hives.

The national department of agriculture believes there may be artificial means, thus eliminating the large waste due to damage by rain in the fields after cutting. For two or three years experiments have been in progress in southeastern Missouri with alfalfa hay, putting it through a kiln drying process. Hay artificially dried is subject to great heat for a short time and comes through the process retaining a rich green color.

C. G. PHILLIPS, "The Wool Fat Man"

I Want to Send Every Owner of Horses and Cows A 2-Lb. Can of CORONA WOOL FAT

On 20 Days Free Trial!

Mail us coupon below (or even just a postal card with your name and address) and we will ship you a 2 lb. can of Corona Wool Fat together with full directions how to use it. We want you to try it for 20 days after you get it, and then if you are satisfied with the results send us $1. If you are not satisfied just say so and you will owe us nothing. We take all the chances.

It Will Cure

Hard and Contracted Feet, Split Hoofs, Corns, Grease Heel, Thrush, Quarter Crack, Barb-wire Cuts, Sore Teats of Cows, Ulcers, Old Sores, etc.

CORONA WOOL FAT must not be confused with ointments which have grease or oil as a basis. The hoof of a horse is from 60% to 70% water, and grease and water do not mix. That is why CORONA WOOL FAT succeeds where other remedies fail. **It is not a grease, but the fatty secretions extracted from the wool of the sheep.** It is readily absorbed by the skin and the hoof and will actually grow a new hoof on your animal. It causes no pain, burning or blistering, and leaves no scars. It will never become rancid or decompose.

Here's Proof That Proves

We Have Thousands As Strong

The Corona Mfg., Co., Kenton, Ohio. North Rush, N. Y.

Dear Sirs—I received the Corona Wool Fat all right and have tried it and it works just as you recommend and even better. My horse was sore in the front feet and she could hardly get out of the barn, and in two weeks time she improved so much that she is as limber as ever, and our blacksmith stated that he never saw anything as good as the Corona Wool Fat.

Sincerely, (Signed) T. J. TISHELL.

Dec. 6, 1912.

Dear Sir—I enclose you remittance in full for Corona Wool Fat. Two weeks ago we had a horse cut on a barbed-wire fence, and our neighbor also had a horse with a nail in his foot, and we used Corona Wool Fat. They are both well and everyone now wants Corona Wool Fat of me. I am going to get a dozen or so of the large cans. I know Corona Wool Fat is all you claim for it.

(Signed) B. S. NESMITH, Wiscoy, N. Y.

Let Me Quote You My PRICE
Let Me PROVE My Quality!

I will give you a *better deal* on a tongueless disc than you can get *anywhere else in the world.* Let me *prove* it to you. Send me your name on a postal for my *book* and *offer.* My Company has made it possible for me to quote money-saving prices to the farmers of this whole country. We can do it because we have a modern factory in a medium size city, where expenses are less than in big cities—and because *we sell direct to you.* We do not have traveling men—don't even sell to dealers. Our machines have been developed so that they do not need to be set up and started by experts. We save those expenses and profits and *give you the benefit* of the saving. *Anybody* can say they give you the most for your money but I'm willing to put my proposition against them all and *let you decide.*

Direct From Factory
All Freight Prepaid
30 Days' Free Trial
Five Year Guarantee

Monmouth Tongueless Disc

No tongue to worry the life out of your horses—no neck weight—no side draft—and that means better work because your horses work *in comfort.* The Monmouth has the greatest Disc Blades ever made—better material, better temper. It's what we call "125-point Carbon"—very tough and hard—takes a splendid polish and holds a thin edge. Cuts like a finely tempered knife blade. Penetrates hardest ground—pulverizes lumps and cuts sod in a way that will do you good to see.

The Monmouth has a *steel frame* with Wood Cushion. The Main Cross Piece is Heavy Angle Steel—side braces are Stiff High Carbon Steel. Square timber through the center acts as a Cushion between side braces—gives it a bit of flexibility—keeps frame from buckling under heavy strain—prevents springing out of shape. Many other features all told about in my new book. Hard Maple, Oil-Soaked Bearings easily lubricated. Forward Trucks make it as easily turned around as a plow. Scrapers held by Coil Spring in just right position to prevent clogging—occasional foot pressure cleans discs in stickiest soil. Furnished with Transport Trucks, Cutaway Discs, Plow Cut Discs—in all sizes.

No neck weight—no side draft. Discs that are *sharp* and *stay* sharp. Wood Cushion that keeps bolts from shearing—prevents frame from springing. Many other features all told about in free book—and the best bargain-price ever made on any disc that approaches the Monmouth Quality.

Just Send Me a Postal Card Now

Remember, I will pay the freight, (or not, as you choose) I will give you 30 days' free trial, 5-year guarantee and a price, direct from factory, that will make you sit up and take notice. Write me. A postal will do. I will also save you money on a plow, cultivator, gasoline engine, cream separator, grain drill, mower, rake and other farm needs. My book tells all. Write for it now. Monmouth Plow Factory, 615 S. Main St., Monmouth, Ill.

Dust-tight Hard Maple Bearings

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Any dehorning of cattle should be done early, as it is an unpleasant task at best, and if delayed till a warm day or two comes on immediately after the dehorning, serious results are apt to follow.

Don't neglect for another day the breeding of the cows you are counting on being winter milkers next season. If they should fail to get with calf the first time or two, it would throw them to come fresh in midwinter.

Always arrange the rubber boots so they will dry out well after being worn, as they usually are damp inside, which results in their being rotted out if they are left in that condition for very long at a time, and they are too costly to allow them to be wastefully ruined in that manner.

If the well for house use is bored but six inches in diameter there will be no danger of any of the little fellows falling into it. There are only one or two drawbacks to the small-bore well, and they will not even compare with the safety such a well insures in the respect mentioned above; while the lower cost is an item to be considered.

Use the thermometer in the dairy—summer and winter.

Arrange to coop every brood of chicks separately. Where more than one hatch is confined in the same coop, the smaller ones are crowded underneath; often smothered or killed by being trampled on. Then they cannot be expected to secure their share of the feed, if fed with the larger chicks; so that the coop of mixed sizes will turn out most unprofitably. More coops will be needed later in the season, anyhow, as the chicks grow in size, and by cooping each hatch separately, the trouble of moving the chicks around will be avoided.

Buy a feed grinder, and do your own grinding of grain, thus saving the time you lose in going to mill, at the same time cheating the miller out of his toll.

Few of us, even we who preach an abundant water supply for the poultry, realize its vast importance. In the first place, an egg is 60 per cent water, which goes to show how important it is that the layers have plenty of water at all times. Then after eating a meal of dry grain, water relieves the thirst of the bird and promotes ideal digestion. Again, when the layer is about to deposit an egg, she feels the need of a drink, and after the work is done, a cooling draft of water lowers the temperature of her egg-producing organs and soothes her entire system.

If the sheep limps examine it for foot rot.

I often hear it argued that manure will return more put on the best land of the farm than on the poorest. Perhaps this is the truth, but no good farmer will let his poorer soil become still poorer at the expense of making a big showing where the soil is naturally richer.

Don't let the word "automatic" fool you into neglecting the incubator. There never yet has been one invented that would require no attention at all.

Hindsight is always a great deal better than foresight. I have a neighbor who paid seventy-five cents a foot to get a 175-foot hole put down on his farm, in the hope of finding permanent water. It turned out to be a dry hole, although a local "water witch" that "never was known to fail" located the prospect for him. This man would have kept his money had he known what he knows now.

Fertilize the asparagus bed early.

Where cholera doesn't step in to take a toll, there is money in feeding corn to shoats. A thrifty bunch of shoats should pay close around seventy cents for corn, now, beating the elevator price by about twenty cents or more. I wish I had more shoats to feed, but it may be better for me that I have not, for cholera may call around at any time.

The main objection to boarding up a barn or any other outhouse on the inside of the studdings is that this makes a safe retreat for the rats and mice. This is a strong objection and if a double wall is necessary they should be placed on the outside of the studdings with a layer of tarred felt between.

The ground hog failed to see his shadow, but every day since then has been far from springlike. If he really has remained outside all this time he must have his toes and his nose frosted by now.

I am a firm friend of the common red clover because it has done well with me, but on soils where it is impossible to get a stand it may be that sweet clover is the plant to sow. It seems that it has made good with many, both as a forage plant and a soil builder and if it will do this its former reputation as a noxious weed should not stand in its way.

Owing to our open winter it looks as though we will have more than enough roughage to carry us through. Those who are feeding ensilage claim that it "goes" about as usual and with even better results than when the weather is cold and stormy. Score another point in favor of the silo and ensilage.

The man who gives his cattle all sun and no shade in summer and all shade and no sun in winter is not on the high road to success as a stock raiser.

The automobile is no longer a novelty, but to see them sailing along the roads in February is rather unusual for us in this part of the country. I don't know how others feel, but to me the sound of sleigh bells would seem more natural than the chug of the auto at this time of the year.

CURRENT EVENTS

PRESIDENT TAFT has vetoed the immigration bill passed by congress, which would have refused admittance to any immigrant who could not read or write some language or dialect. The bill did not require the ability to read or write the English language, but was designed to shut the doors to the riff-raff from foreign countries who have not the intellectual energy to know at least their own language or dialect. It was admitted in congressional debate that the new bill would keep out many of the undesirables from Italy, Greece and other countries of southern Europe, while it would have practically no effect upon the desirable emigrants from the northern countries of Europe. Notwithstanding this, however, President Taft vetoed the bill, declaring that he was opposed to any law which prevented the downtrodden from any foreign country finding a refuge in the United States. The senate again passed the bill by a vote of seventy-two to eighteen, but the house failed by five votes to repass the bill over the Taft veto. The movement to restrict immigration and require either an educational or a property test has been under way for many years past and there was a general feeling that the educational test was much the fairer and more important. The bill would have placed representatives of the government on board of foreign vessels to make the required examination in advance of arrival at port and this was objected to by many, but was adopted in order to expedite matters. The United States has been built up, in large measure, by the higher class of immigrants from northern Europe, but all too many undesirables have been admitted, from southern Europe, in the past.

PLANS for a reorganization of the republican party continue to be broached. Sen. Elihu Root, New York, and Sen. Murray Crane, Massachusetts, two of the reactionary leaders, came out during the past week in favor of a national convention some time this fall to revise the rules for the national convention in 1916 and cut down the unfair representation of the southern states, thus allying themselves in this particular with Senator Cummins and Senator Kenyon, of Iowa. Senator Root, who was chairman of the republican national convention in Chicago last summer which permitted the steam roller to run things, is quoted as follows: "I am in favor of holding a republican convention at some convenient time next fall or winter for the purpose of doing two things. First, to make representation in national conventions proportional to the republican vote—that is, correcting the southern representation. Second, to permit the republicans of each state to elect delegates to national conventions in their own way, so that the choice in each state will be regulated according to the laws of the state. In order that these changes shall be effective in a convention to nominate a president, they must be made before that convention, and that can be done only by a good convention. The national committee still is bound by the old rules which were adopted by the convention of 1880. They will have to call the next convention just as they did the last one, under these rules, unless a special convention is called to make the changes which certainly ought to be made." There is a general conviction that if the republican party is not to trail third again, as it did last November, reforms must be granted to the people as they have long demanded.

JOAQUIN MILLER, the poet of the Sierras, died in his lonely cabin, high up in the California mountains, during the past week, at the age of seventy. Mr. Miller was known and beloved as one of the leading nature poets of the country. Ever since the publication of his "Songs of the Sierras," over forty years ago, he has been honored as one of the gifted verse writers of this country. He spent the greater part of his life "far from the madding crowd," living in seclusion among the foot hills and mountains which he so dearly loved and which furnished a theme for the great majority of his poems. Mr. Miller was of a picturesque appearance and personality, and with his long, flowing hair and garbed in true western fashion made a striking appearance on the infrequent occasions that he appeared in public. With John Burroughs he ranked as the leading nature writer of the country at the present time

ON TUESDAY of next week Woodrow Wilson will be inaugurated president, the first time that a democrat has been called to the White House since Grover Cleveland was retired sixteen years ago. The president-elect will retain his office as governor of New Jersey until Saturday, March 1st, by which time he hopes to have his anti-trust legislation program completed, the state senate having already passed his bills, with good prospects of the house doing likewise. Governor Wilson will leave Princeton for Washington next Monday evening, accompanied by 1,000 or more Princeton students who will make as much noise as possible in the interests of their distinguished fellow townsman. The first event on the program for inauguration day is the induction into office of Vice-President Marshall, after which President Taft and President-elect Wilson will ride down Pennsylvania avenue together, President Wilson will be sworn in and then will review the big inaugural parade from the White House. President Taft will go immediately to New Haven, Conn., where he will enter upon his duties as professor of international law at Yale University. President Wilson will deliver a short inaugural address, promised not to be more than 2,000 or 3,000 words in length, and will thereafter immediately announce his cabinet appointees, not one of whom has been named as yet, although it is confidently expected that Wm. J. Bryan will be secretary of state. Congress will be called in extra session within a few days after the inauguration, to take up the work of revising the tariff downward, and by the middle of March the democrats will be in full control of the government, prepared to put their program into prompt execution.

BETRAYED by his own troops and placed under arrest in the presidential palace, Francisco I. Madero, chief executive of Mexico since Porfirio Diaz was deposed, has been forced to resign the presidency, thus bringing to a temporary end, at least, the revolution which has practically devastated the city of Mexico for the last ten days. General Huerta, one of Madero's leading commanders and a personal friend of Gen. Felix Diaz, rebel leader, has been chosen provisional president until peace can be restored and a new election called at which a president will be chosen by the people. Separated by less than one-half mile the batteries of Madero and Diaz poured shot and shell into each other for more than a week, stray bullets and shells causing great destruction in practically all parts of the capital city, the American embassy being repeatedly struck and the American ambassador missing death narrowly. The engagement between the two forces has not only been bloody, but is the first time in the history of the world when such a terrific encounter has been fought within the business district of so large and prominent a city. It is stated that between 1,000 and 2,000 lives have been lost, while the property damage mounts high in the millions, many of the leading buildings of the City of Mexico being practically ruined by the artillery duel. President Huerta is described as a stern soldier of the type of former Pres. Porfirio Diaz, a man of great personal bravery and a friend of the older Diaz. Unless he can succeed in effectually restoring peace at an early date a resumption of the revolution is probable, while the possibility of American intervention (to save American life and protect American property) looms large. President Taft has coped with the situation in an able manner, but has hesitated to take decisive action because of retiring from office at so early a date.

The early March litter of pigs is liable to come to a great deal of grief before the robin proclaims the coming of spring. It all depends upon the weather mood and also the farrowing quarters. We can regulate the latter, but not the former. have known it to happen so the March litter fared better than the April or May litter, but the weather wise are promising us fine weather for April and May this spring.

Exceedingly high prices, as a rule, are not good for the finance of the country. It would seem as if the prices now being paid for considerable of the stuff at public sales is high enough to put some of the purchasers to the bad when the day of settlement comes.

This BETTER Fence Follows Every Hill and Hollow

THE *swinging joint* allows *Apex Fence* to conform to the roll of the *land*. The upright stays clasp the line wires firmly, yet the line wires swing up or down hill or hollow, while the stays always stand plumb. It is the easiest fence to put up—no buckling or straining, no sagging or lopping. That makes a better fence, and *saves money* on the first cost.

APEX TRADE MARK FENCE

Many Other Advantages Besides the Swinging Joint

The swinging joint makes Apex Fence the best fence bargain even if it were no better in other ways. But to make every part of the fence as good as the joint, we use only high-grade genuine *Open Hearth Steel—galvanized* by the most thorough and modern process that brains and money have been able to discover—and *guarantee* Apex Fence to *satisfy*.

Let us tell you some things worth while about fence. Let us prove that Apex Fence costs less per year than any you have had. We save you money in repair cost as well as first cost. Get the best you can buy and you will be pleased. Apex is now on thousands of farms giving the best of satisfaction. Shall we send you letters to prove it?

Get All Facts Before You Buy!

Don't buy a rod of fence for *any* purpose until you get our booklet. Just tell us about how much fence and what heights you'll need, and when you expect to put it up. Also tell us at what town you buy your fencing. We'll send you our free booklet and important facts, with an interesting proposition. We may have an Apex dealer near where you can see the fence. In any case, you will be supplied with fence promptly at the right price. Address

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

MAKING A WILL—CHILDREN OMITTED.

A Subscriber, Axtell, Neb.—My father died leaving three 160-acre farms, valued on the assessor's books at $46,000, and some town property worth $4,000. He had seven children and willed the three youngest all his real estate, providing in the will that they should pay two of the older ones $3,600 each. One of the older ones is dead, leaving two small children. They get nothing. The will states two things: First, that the five children shall share and share alike, but closes by giving only $3,600 to two, and all the land to three. These three children took the old man, seventy-three years of age, out of his bed when he was very sick and had the will made, inducing him to believe that the land was too high at its real value, and that they could not stand to pay the price. They had used their influence to this effect for several years. Father told several parties after the will was made that he wanted all his children to share alike. Can anything be done about it? Does not the law require that something must be given a child?

Answer.—It is most likely that the old man was induced to make the will as he did by the exercise of undue and perhaps wrongful influences, and if this be so the will can be set aside by proc edings brought for that purpose. See a good local lawyer and explain the matter fully to him. Where a parent fails to provide for one or more of his children by his will and the omission is not intentional, such child can get its full share as though no will had been made.

STATUTE OF LIMITATIONS.

A Subscriber, West Branch, Iowa.—A owes B $5,000, for which he gave five notes of $1,000 each, one note being due and payable each year for five years, all drawing interest. A failed to pay off any of the notes, but kept the interest paid. At the end of the five years A wanted the time for payment extended for five years more. (1) When will the first note be outlawed? (2) Is the law on the subject the same in California as in Iowa?

Answer.—(1) In ten years after it is due and payable. (2) It is not. In California a note becomes barred by the statute of limitations in four years after it is due.

SALE OF PROPERTY ON CONTRACT.

A Michigan Subscriber.—A bought a house and lot from B for a certain sum, paying part cash and signing a contract to pay the balance in equal yearly payments. A lived on the place less than a year and made all sorts of improvements thereon, and left it and has paid nothing more on it. (1) Can B hold A liable on the contract? (2) Can A recover anything from B?

Answer.—(1) B can hold A liable on the contract for the amount he agreed to pay. (2) As to whether or not A can recover anything from B depends upon the terms of the contract. It may be that there is a clause in the contract providing that in case A fails to comply with it he is to forfeit the amount he has paid. Show the contract to a good, local lawyer.

HEIRS' MONEY IN COUNTY TREASURY.

A Subscriber, Newhall, Iowa.—A died leaving property in Illinois, willing the property to his wife during her lifetime and then to the heirs of his brother. The property was sold and some money left in the county treasury for the heirs. Can the heirs hold the property, or will they have to be satisfied with what money is left in the county treasury for them?

Answer.—The property was no doubt sold by and under the order of the county court, and the proceeds of the sale deposited with the county treasurer by order of said court, as the law of Illinois provides. Therefore the heirs cannot hold the property, but are entitled to the money, and may apply to the court for an order directing it to be paid over to them.

DANGEROUS PUPIL.

A Subscriber, Wellman, Iowa.—A had two children going to school, one of them nine years old. Y has a boy about ten years old who seems to be feeble minded, and he was going to school. He kicked A's nine-year-old child and she died from the hurt four days' afterward. The school board refuses to turn the boy out of school. The boy threatened to kill with an axe he carried. A keeps his other child at home. What can A do about the matter?

Answer.—A has no legal remedy. The school board has power to expel

Grips Every Strand With An Iron Hand

The Square Deal lock is the secret of the success of Square Deal Fence. It double grips the one-piece stay wires to the strand wires so they can't possibly slip. The wavy strand wires *keep*

the boy from the school, but if it refuses to do so, there is no way to compel it.

FENCES—JOINT TENANCY HUSBAND AND WIFE.

A Subscriber, Oconto Falls, Wis.—A and B own adjoining farms. A owned his land first and therefore he erected all of the partition fence, consisting of three barbed wires, and there is a large bow in the fence. (1) Can A compel B to pay him for half the fence, or can B put in his half and let A take his fence up? (2) A and B were husband and wife and owned a farm, the deed thereof being made to both A and B. They have two children, both of age. A died. Can B sell the land without making any settlement with the children. If not, can the estate be settled without going through court, if B and the children can agree to a settlement? (3) Would a settlement by agreement stand in law?

Answer.—(1) A can compel B to pay him for one-half the value of the partition fence by having the fence viewers meet and determine the matter and fix the value. (2) When A died the entire farm became the property of his surviving wife, and she can sell it without making settlement with the children. No further answer is necessary, as A and his wife were not tenants in common, but tenants by entirety, or commonly known as joint tenants of the land.

ADJUSTING LOSS BY WILL.

An old Subscriber, Earlham, Iowa.—My youngest son bought 160 acres of land at Akron, Colo., in 1909 and was married in the fall of the same year and moved to the land. His wife's parents had land there and moved to it at the same time. My son put buildings on the land and broke up seventy-five or eighty acres. In the fall of 1910 he became sick and came back to Iowa the next summer and died in August, 1911. He left one child, six months old. An administrator was appointed to settle his estate. I had loaned the boy $1,050 to pay on the land and also secured him in $1,000 more to improve the place. He contracted other debts, so the whole amount of claims against his estate was $5,800. I paid the $1,000 note I secured for him. The administrator said my claim was a fourth-class claim and I would not get more than 10 per cent, as there were claims of the first, second and third class ahead of it. My claim is $2,400. The place was sold and the widow bought it December 2, 1912, for $1,000. Can I so arrange matters that my loss will come out of the child's interest in my estate, and if so, how can I do it?

Answer.—You can very easily arrange the matter by making a will giving the child that much less than you would otherwise give it.

SURETY ON NOTE—NO NOTICE.

A Subscriber, Keswick, Iowa.—A gave his note to a certain bank and B went his security, or signed the note with A. The bank kept the note in its possession for nearly three years, neither principal nor interest being paid thereon. At the end of this time A disposed of all his property. B had no notice of non-payment of the note. Has the bank done its duty to B, and what is the effect on B's liability

Answer.—The bank has not done its duty to B in the matter. When the note was due, the bank should have presented it to A for payment and if not paid the bank should have notified B without delay of such non-payment. Having failed to do this the bank will be unable to collect the note from B by law.

REDUCING COST OF BEEF PRODUCTION.

By H. J. Hess.

ONE of the problems which confronts the farmer of the corn belt region of the United States is the production of beef on the farm. The dry land farmer and the irrigation farmer have divided up the ranges and ranches and the cheap beef of the past is no longer a pos ibility. We must raise our own beef or we must ship it in cold storage from the Argentine or other countries. There is no getting around this problem; it must be faced. We have a rapidly increasing population of non-producers, who must have meat, and it is up to the farmer of the corn belt to supply this meat.

The former methods of cultivation on many of our corn-belt farms have rendered it absolutely necessary that live stock be kept for the maintenance of their fertility. And yet the farmer finds himself seriously hampered in facing this problem because of the fact that he does not know how to profitably produce beef under present conditions. With corn at from fifty cents to seventy-five cents per bushel a large investment in farm equipment and work teams, the high price of land, the scarcity of help and the other conditions which surround the present-day farmer, he is at a loss to know how to begin to raise beef profitably on the farm. The existing high prices for beef animals will undoubtedly result in a large number of farmers attempting to raise beef and this in turn will result in a larger consumption of the corn crop, with the final result that a greatly increased number of beef animals will tend to reduce the price on the market, while the greater increased consumption of corn will tend to raise its price on account of scarcity. This will make many farmers conclude that it is more profitable to sell their corn at an occasional high price than it is to feed it and sell it on the hoof.

Right here is where the silo has come in to play an important part in beef production. With ensilage the cost of feeding cattle can be very largely reduced. One acre of good corn put in a silo will furnish the best of roughage for four head of steers weighing 1,000 pounds each, for six months, with but very little hay. This same acre would not furnish hay enough for two steers the same length of time. By the use of a silo we can take at least one-half our present hay meadows and convert them into cattle pastures and this will enable our corn-belt farmers to keep more cattle on their farms in the summer months.

Let us compare ensilage with corn fodder in the shock. One acre put into a silo will furnish as much feed as two acres the same kind of corn in the shock, besides the advantage of having your feed where you can get at it with pleasure during the cold winter days. Corn put into the silo is very palatable and stock clean it all up and the waste is so very small that it does not pay to mention it.

It furnishes a succulent feed for the winter months where, under old methods, we had dry feed stuff altogether. I have fed steers as high as thirty-five pounds of ensilage per day with no bad results: I have never had a steer miss a meal or even scour. When given all the ensilage they want with their grain rations, they will scarcely ever eat hay at all. From my experience in feeding beef cattle, I think a ration of twenty to twenty-five pounds of ensilage, fifteen pounds of corn cob meal or crushed ear corn, two pounds of cottonseed meal and what clover or mixed hay they will eat is very satisfactory. By the use of the silo the corn-belt farmer will be able to produce his own feeding cattle instead of depending on the market centers for them. Farmers of the corn belt will be able to produce prime beeves at a young age that will pay a good profit and beef production can nearly be doubled on our farms.

All experience teaches that the farmer, who raises beef animals and feeds them from the crops produced on his own farm, not only makes money by the direct operation, but is free from the losses which surely come to those who wobble from one thing to another, and he is sure of maintaining the fertility of his own acres so that his farm may not only be the means of his support and pleasure, but a rich inheritance for the coming generation.

Get the breeding stock in the poultry yards separated at once. The effect of mating will taint the strain for a longer period of time than most of us think.

Cut Down Upkeep

By R. E. Olds, Designer

I have built cars for 26 years—60,000 of them.

But of all I have learned, nothing else compares with these ways for cutting upkeep—shown in Reo the Fifth.

The Final Cost

The buyer sees just the car's first price. But the vital thing is the after cost.

That may be little or it may be much. It depends on the builder largely. And the difference to you, in the course of five years, may be $1,000.

How I Reduce It

One big item is tires.

In Reo the Fifth I cut this cost by using tires 34x4. They cost $60 per set more than tires often used on a car of this weight. But they save many times that in tire bills.

I use in this car 15 roller bearings—11 Timken, 4 Hyatt. They cost five times as much as common ball bearings. But they do not break.

I use 190 drop forgings, at twice the cost of steel castings. But drop forgings don't have flaws.

Margin of Safety

Axles and driving parts should show very large over-capacity. I build them all to stand the tests for a 45 h. p. car. That leaves enormous margin.

I have all steel made to formula. Then I analyze each lot twice.

For testing my gears I use a crushing machine of 50 tons' capacity.

I use 7-leaf springs, two inches wide. And I test them for 100,000 vibrations.

Each engine is tested for 48 hours—20 hours on blocks, 28 hours in the chassis. I employ unusual tests.

Each car in the making gets over 1,000 separate tests and inspections.

Costly Items

I use a $75 magneto to save ignition troubles. I doubly heat my carburetor, for low-grade gasoline. I use a centrifugal pump, not a syphon. That adds about $10.

I use 14-inch brake drums.

I give each body 17 coats, so the finish will endure. I use the best genuine leather in upholstering. Also the best curled hair.

I am using flush electric dash lights in place of the old-style lamps.

All these things are costly. Yet I supply them, through factory economy, in a wonderfully low-priced car.

A car without them is likely to cost five times as much for upkeep. There may be costly repairs, and frequent.

I never would buy a lesser car. Therefore, I never shall build one.

Our $100 Control

Here is one feature worth $100 which costs not an extra penny.

It's the Reo center control. All the gear shifting is done by moving one little handle only three inches in each of four directions. It is as simple as moving the spark lever.

The driver sits on the left hand side, as in the latest high-priced cars. And this control lever is at his right hand.

Both brakes are operated by foot pedals. There are no brake levers, so both front doors are clear.

A car in these days should have these modern features.

Sold by 1,000 dealers. Write for our 1913 catalog and we'll tell you the nearest show-room.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.
Canadian Factory, St. Catharines, Ont.

Reo the Fifth
The 1913 Series
$1,095

Made with 5 and 2 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170).

Succeed with SALZER'S Seeds

SALZER'S Northern Grown ALFALFA

The farmer's "get-rich-quick" crop. Can be grown in any state in the Union. Alfalfa is the crop of the future—no! the crop of the present. Salzer's Alfalfa is Northern Grown—acclimated. Hardy, luxuriant. Has three times the feeding value of Red Clover and Timothy. If you keep cattle, hogs or sheep, you should plant Alfalfa. But be sure you get Salzer's famous Twentieth Century strain, with United States Government purity test of 99.85 per cent.

You have to get it direct from us. We have no agents or dealers; thereby save you commissions. We give you the lowest prices and highest quality. Send for quotations.

Salzer's Earliest Six Weeks Potato

The monarch of general purpose potatoes. Northern Grown. Ten days ahead of Early Ohio and other "earliest" sorts. Reliable yielder. Good size. Splendid keeping. The potato for every potato-growing district, north or south. We handle all reliable varieties. Prices always the lowest. Get our figures and change your seed stock this year while potato prices are low.

Salzer's Famous Silver King Barley

We are the largest growers of Seed Barley in the world. Our Seed Barley is at the top for yield and quality. Quick to mature. Fabulous yield of 175 bushels of 50 pounds per acre. Catalog contains sworn statements of growers. Send for it.

Salzer's Rejuvenated White Bonanza Oats

has stood at the top for more than twenty years. It won $500.00 in gold open to the world for the heaviest yielding oats. We have rejuvenated this oat and the result is an oat stronger in straw, healthier, larger, plumper, meatier kernels, yielding from 20 to 50 bushels per acre more than any other oat known! There is no finer, plumper, handsomer oat grown in the United States.

10 Big Sample Packages 10c

For ten cents we gladly mail one package each new $1,000 Marquois Wheat, Twentieth Century Alfalfa, Rejuvenated Bonanza Oats, Silver King Barley and other farm seed packages, together with our great seed book.

Our 1913 catalog is bigger and better than ever. You can get valuable articles for the farm, home or personal use, as premiums, free. Send for this catalog. It is free for the asking. But, remember, now is the time to send your dime for our great farm seed offer.

Salzer's Pedigree Fertile Farm Seeds

We are America's largest growers of farm seeds—Alfalfa, Clovers, Grasses, Oats, Rye, Barley, Wheat, Potatoes, Seed Corn, Onions, Tomatoes, Peas, Beans, etc. All seeds are Northern grown and grown under our eye and our care, on the lands famed for its Red Clover. No seeds shipped before being thoroughly twice tested for vitality and trueness to type. You will find what you want in our big catalog and premium list. Copy free to you on request.

JOHN A. SALZER SEED CO.
124 So. Eighth St., LaCrosse, Wis.

SENATOR CASHMAN'S 100% SEED CORN

I want to *increase* the corn yield of *every* farmer in the Northwest.
I want *you* to grow *more* bushels of corn per acre this year than you *ever* grew before in your life.
I want *you* to have the benefit of my experience.
I am a corn crank---its my hobby.
I have been breeding and growing corn on my farms here at Owatonna for years.
I make my fields produce from 35 to 40 bushels *more* corn per acre than the average Minnesota field.
My claims are based on *facts* and are not mere extravagant statements.

FREE TO YOU

Handsomely illustrated and descriptive 1913 Seed Book telling all about Farm, Vegetable and Flower Seeds—"Seeds of Quality"—will be mailed to you on request. Write today - now.

To make sure that the best scientific methods would be used in growing, selecting, testing and storing my seed corn, I employed Professor Theodore Sexauer, the greatest corn expert in the Northwest, with the result that I now have several thousand bushels of 100% seed corn—corn of my own growing, carefully selected, hand gathered in the fall before being injured by frost and every ear individually tested.

This quantity of perfect testing seed corn will not last long. Last year I returned $15,000.00 to customers after my supply was exhausted because I would not fill their orders with inferior seed. I will do the same this year. When my 100% corn is sold no further orders will be accepted--the money will be returned. Therefore, it behooves you to order early. First come, first served.

You can grow as much corn to the acre as I do. My book "Seeds of Quality" tells you how I do it. If you will get this book, which I send free of charge, and will get my **guaranteed 100 per cent seed corn,** you can improve your stand tremendously and get more bushels from every acre.

My seed corn is all sold on the ear and every ear individually tested.

Don't plant corn and just HOPE it will grow. Get my 100 per cent seed and KNOW it will grow.

Thomas E. Cashman, President,

Clinton Falls Nursery Company, - - Owatonna, Minnesota.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

HARDY CATALPA CULTURE.

A reader of this paper asks for some information upon the subject of catalpa growing. It is one of the good signs of the times that there is a constant growing interest in timber culture. Among the varieties which may be planted in the central north with best prospects of success, in a commercial way, the catalpa takes high rank. This tree has sported into several forms which are native to the region extending from central Ohio, and Indiana southward. The varieties grown in the extreme Southland are too tender for use in the Northwest. But the form called Spaciosa, has proven to be hardy, succeeding as far north as central Minnesota. But going westward the limit of its safe culture would probably cut through north Nebraska.

The western boom for this tree was started in the sixties, by Suel Foster, a nurseryman of Muscatine, Iowa. He looked up the record of the tree as to rapidity of growth and durability of timber, and published his findings. At the same time he secured seed and starting the little trees in nursery, disseminated them all over the Northwest. He dwelt especially upon the value of the timber, and as one means of advertising it he furnished catalpa boards for the interior finishing of the horticultural rooms in the new capitol then building in Des Moines.

The culture of the tree made its way rapidly among foresters, and there soon came from all quarters stories of failure as well as success. An investigation showed that the brisk inquiry for the seed had led to the mixing of the tender, worthless southern varieties with that of the Speciosa. This was a bad break and caused trouble and loss to great numbers of planters.

As a rule the nurserymen were not personally responsible. They bought such seed as they could get in the market, supposing it to be all right. As the seed of the different varieties are indentical in appearance no one can distinguish them after they are once mixed. This unfortunate error gave catalpa growing a black eye, from which it has not entirely recovered. There are scores of planters all over the central North who will today declare that the catalpa is a humbug. And their experience seems to warrant the charge. But when more care was exercised in getting true hardy seed, and as far as possible northern-grown seed, better results followed.

There are some growers who claim that it matters little where the seed is grown—in Minnesota or Kentucky, so that it is the Speciosa. But we believe it safer to choose the northern seed. Trees do slowly adapt themselves to their climatic environment, and it is reasonable to expect that trees grown in the North for two generations will be hardier than trees from the South. And there is no difficulty now in getting northern seed.

Two ways are open to the grower. The money-saving way is to get seed and grow the trees in the home garden. The seed is small—somewhat the shape, but a little larger than parsnip seed, and a pound of it ought to start 5,000 to 10,000 trees. Plant either in fall or spring, scattering in the row as you would any garden seed. Cover but lightly—an eighth inch of soil is enough—but mulch with a half inch of hay or straw to retain moisture until seeds germinate. Even with favorable weather it will be ten days or more before the plants appear. Cultivate thoroughly for two months, and if you have too good a stand thin out to one every three inches.

In October your trees should stand from twelve to twenty inches. They will be ready to transplant the following spring. But a quicker way to get a grove is to buy the one-year seedlings of the nurseryman. The trees have strong vitality and will stand handling. And always provided you get the right variety, you will be one year ahead of seed planting. They will cost you from $2 to $4 per 1,000.

Genuine—Unadulterated

No matter how **valuable** your land. No matter how much you **weed, hoe** and **dig.** No matter how much the sun shines or how much it rains, nor how much you irrigate your land; **and all these things represent money.** Your efforts are all in vain and the money lost if you get cheap seed. Why take a chance even if you get your seed for nothing, on stale, low-germination test inferior seed when you can get **Pure—Genuine--Unadulterated** seed from us? We sell only one quality—no second or third grades

HARVARD NURSERY, Box W HARVARD, ILL.

So it is a question of money and time, which each man must decide for himself. But mark this point: if you dislike the fine, close work of seed planting and gardening, and are therefore likely to neglect your young trees, you had better buy of the nursery.

Experience in growing catalpa shows that the best way is to plant in groves, four by four, or six by six feet. Planted closely the trees trim themselves, grow straight and thinning out at the sixth year, the poles are valuable, being ten to fifteen feet tall and three inches in diameter at butt.

When planted in rows along street they will be larger at the ground in a given number of years, but will make many large branches and be spreading trees. If planted six by six feet, and not thinned they will at the end of ten years make each one good fence post, and a lot of wood and poles. And when fifteen years old each tree will make three good fence posts, posts worth a shilling each, or thirty-seven and a half cents per tree. As you have 1,800 trees per acre this figures out a gross value for the crop at the end of fifteen years of $675 and this equals an annual rental of $3 per acre for the time the crop was growing. This is supposing that you wish to realize at the end of fifteen years, but you had better not. The trees will grow more rapidly in value after that time, and you should by all means let them stand for twenty-five years.

But this is "if," "but" and "perhaps." If you get the right trees to start with, and if you give them the right start, and if (here comes in the most important if) if you plant them upon rich soil. It does no good to plant the catalpa upon poor soil. A rich, deep soil, either prairie mold or forest leaf, compost will make the catalpa hump itself. But a thin sandy soil, or a poor clay will not do it. This tree is a native of rich bottom lands, and it has its strong preference for the soil where its roots are to labor for a livelihood. So if you have a rocky hillside, or a sandy plain which you have reserved for timber, try the larch, or the walnut, or anything but the catalpa.

Will it pay to plant timber? Yes, by all means. Old Judge Oliver, late of Monona county, Iowa, one of the most successful foresters which the state has ever produced, used to say: "No land is too valuable for tree planting." We believe that he was right. It is not only the direct results in dollars and cents, but there are various economic and general profits from groves not easily estimated, but none the less real which swell the profits in a term of years far beyond what any common farm crop yields. Plant timber, of the best varieties, and plant generously.

THE FARM GARDEN.

To the Editor of The Homestead:

With a little attention there is no piece of land which gives the farmer better returns for the labor and cost expended than the home vegetable garden. Yet few farmers realize this for they neglect the garden and put the time onto what they mistakenly believe to be more important work. If strict account is kept the average farmer will find that under ordinary conditions his garden returns clear profit of at least $100 per acre. If a good market is handy it is often very profitable to raise a little more than we need for home use and sell. Of course where the surplus cannot be sold to good advantage only enough of each vegetable for home use should be grown so that there will be no waste. Vegetables are about the most healthy food man can eat and if there is a good variety in the garden almost the entire summer's living can be had from home-grown products. Then too they can be taken fresh and crisp from the garden direct to the house and served at their very best. Truly a good garden is worth working and planning for. The earlier the garden can be brought to bear and the longer it can be made to continue so the more value it will return. We should plan the garden with this idea in view. I prefer to plow the garden in the fall for the freezing not only improves the texture of the soil so that the seed bed is better, but also enables one to get started several days earlier in the spring than

One Dollar

Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded

Manson Campbell

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

Your Dollar Returned

if you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment*. Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sun-taken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades corn so that a *round or edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept 50

Big Money in Oats AND HOW TO GROW THEM

I want every reader of this paper to write me for my new book, "Big Money in Oats and How to Grow Them." Just mail me a postal or a letter giving me your name and address and I will send you this valuable book together with a free sample of our pure Canadian Grown Regenerated Swedish Select Seed Oats. This book was written by Wm. Galloway, Professor N. L. Bowman and other seed experts. It contains priceless information worth real money about how to make big money in oats, how to make a seed bed, how to start a seed patch, how to make oats stand on rich ground and how to grow a bumper crop of oats. It is profusely illustrated by photos taken from actual life and contains, besides, facts, figures and opinions given by farmers all over the country. Now, remember, this book is **free** for the asking and we will send it to you together with a free sample of the oats or, better still, enclose 10c to cover packing and postage, and we will send you an extra big sample packet, or for 25c we will send you a triple size and for 50c a packet three times the size of the 25c packet. In addition to this, after you have had a chance to examine the sample oats, if they suit you, as I know they will, you can return the empty packets to us and we will accept them the same as cash in part payment on any future orders you may send in. Can you beat this offer? Never

Feed Your Old Oats to the Hogs

Better feed your old oats to hogs or the horses, or sell them. You can afford to do it when you stop to figure up the net results between our seed and ordinary seed. For instance, which is cheaper—Genuine Imported Regenerated Swedish Select Seed Oats that germinate nearly 100 per cent—every oat sprouting—Fresh, Hardy, Full of Life and Vitality—or oats that are half hulls full of weaklings, that plainly prove they are inferior and run out? Our thoroughbred Imported Canadian oats cost a little more than common seed at the start, but if you pay twice the price and receive common seed for nothing, our oats would be cheaper and bring in the most profit. It's net results that count. Here's the proof

J. E. Andrews, Dassel, Minn., writes: "Yielded 105 bu to acre" Oscar Kling, Alamosa, Colo. writes: "Yielded 141 bu to acre" H Hendrick, Roanoke, Ill., writes: "Got 95 bu. from one acre" A J Barber, Clinton, N. Y., writes: "Galloway, you are right. Last spring I bought some seed oats of you. Just threshed. Yielded 80 bu. per acre."

Write For New Free Oats Book

We'll tell you how to put your oats growing back on a money making basis—Discard your old in-bred seed oats and start your crop this year with our Regenerated Swedish Select Seed Oats. They'll make you big money.

You can raise 75 to 140 bushels to the acre with our seed. Imported direct from Canada. Extra fine. Send for free sample. It speaks for itself. Our customers who bought from us last year raised from 75 to 140 bushels to the acre against one-eighth to one-half as much from their old seed, which proves our statement that farmers need a change of seed oats in this country.

We specialize on extra fine Seed Oats on our big Canadian Farm—new clean land—and grow the Genuine Regenerated Swedish Select Oats which have broken all records. Specially bred to suit climatic conditions in the U. S. Matures from 12 to 15 days earlier than other kinds. Extra large white berry. Thin husk. Stiff straw. Tremendous yielder. Rich in protein, and just the oat you have been looking for.

Why not start a seed patch on your farm this year? It has paid others big. It will pay you. Write us early. The demand for our seed is tremendous. Last year we had to return orders we could not fill. Write early. Demand tremendous. Supply limited.

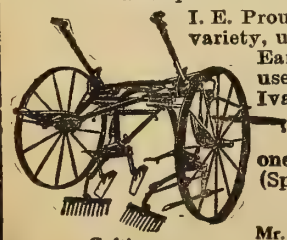
INCORPORATED 1901 **Towers' System of Surface Culture**

In the season 1912, the Cornbelt enlarges credit to our "right way."

Without commercial fertilizer the **Tower Surface System** gave the results always claimed as shown in prize contests and special efforts. At the Iowa Corn Contests the following prize winners were users of the **TOWER.**



Cultivator

I. E. Proudfit, Altoona, Iowa, **grand sweepstakes,** best 10 ears corn any variety, used both pulverizer and cultivator.
Earl Zeller, Cooper, Iowa, whose **yield** on one acre was **141 bushels,** used the Tower Cultivator.
Ivan Houser, Farmer City, Ill., used the **Tower** Cultivator on 7 acres with **average** yield **117 bushels** per acre—1 acre **122** bushels.
Chester Yarnell, St. James. Minn., used the **Tower Cultivator** on one acre, with yield, **103** bushels.
(Space does not permit mentioning many others.)

The Tower is all that any country needs.

Mr. Farmer:—Your cultivator should bear our name ☞ **"TOWER"** on the tongue. Let us send our free literature.

(One Right Way)

J. D. TOWER & SONS CO., 40th Street, Mendota, Ill.

where breaking is deferred until spring. The earliest vegetables can be grown on a gentle southern slope with an evergreen windbreak from the north. The garden should not be laid out haphazard but a definite plan should be made and followed. In laying out the garden all permanent plants as rhubarb, horseradish, asparagus, etc., should be to one side so as not to interfere with the cultivation of the annual plants and the plowing of the plot. We get some extra early and choice rhubarb by placing a headless barrel over a few crowns and piling fresh horse manure about them. In our anxiety to get the garden started early in the spring. We must not forget that the soil must be thoroughly prepared and warmed before putting in the plants and seeds. If the soil is improperly prepared the plants will never make satisfactory growth while if the bed is ideal the growth will be quick and good. I prefer manure to all other fertilizers as it not only restores the food elements to the soil, but also supplies humus which greatly improves the mechanincal texture of the soil and enables it to catch and retain more moisture. I like to fertilize heavily in the fall before plowing and give a light top dressing in the spring again when preparing the seed bed. The top dressing is best applied with a spreading machine and the fine bits are easily worked into the surface when harrowing in the spring. The best manure on the place should be used for the garden as the soil must be very rich for many of the plants are gross feeders and on many plots two crops will be harvested during the season.

Best results cannot be realized from the garden without a hotbed and no farm should be without at least one. They are inexpensive and a great aid in starting seedlings for later transplanting. Peas are the earliest plants that can be started outside and can be planted late in March. The early smooth varieties should be used. When the seeds for peas are sown outside seeds for celery, tomato, pepper, lettuce, parsley, eggplant, early cabbage and early cauliflower should be started in the hotbed to be ready for transplanting at the proper time. Active outside work does not begin until April when onion, cress, kohrabi, beet, carrot, radish, parsnip, turnip, squash, potato and many other things can be started. We do not make all of our seasons' sowing at one time, but put in a little of each kind at intervals of two weeks thus keeping up a succession. It is best to arrange the crops in rows rather than beds for there is much less work in cultivation and less waste space in the garden. All cultivation that can be done by horse and for the smaller vegetables I find the wheel hoe a very efficient and useful implement. Other implements which I find very useful are the common hand hoe, onion hoe, hand dibble and weed hook. Of course, the spade and hand rake should not be left out. As soon as a crop is harvested I have another to take its place. Thus, after the early peas and beans are harvested celery plants are set in their place. Sometimes I follow the peas with spinach. Early cabbage is followed by late peas or turnips and early potatoes are followed by late cabbage. Onion sets, radishes or lettuce can be followed by celery or some such crop. Before digging the early potatoes late corn can be started between the rows. Every year we aim to grow all the vegetables we think we can possibly use of our favorite kinds and a few trial specimens of something new to us. Very often we are disappointed, but then again we often find something very good and at any rate we cannot lose much since our first venture is always small. If a crop matures too late for another to take its place we sow crimson clover to turn under for green manure thus helping to keep the soil supplied with humus and fertilizing elements.

Again, I say that if properly cared for the garden is a very paying proposition, but it requires planning and work. The work is often of a nature that is very beneficial for the children to perform. In any case cultivation must be kept up and after the crops get started they must be watched for insect and disease enemies and spraying done in time.

C. J. Griffing.

WHAT KIND OF CHERRIES AND PLUMS TO GROW.

A subscriber asks what varieties of plums and cherries are the best for market, such as can be grown successfully along the northern line of fruit growing.

We understand that this subscriber proposes to grow these fruits for market in the hope of making some profit from them. When a man invests his time, his land, and a certain cash outlay he needs to be pretty certain of his venture. He wants above all things to be sure that his selected varieties are the surest, and that his market demand is steady and reliable

The best location for such an enterprise is close to a line of road running north into the fruitless lands. The direct line is an advantage because you may ship 200 miles direct, cheaper than you can send fifty miles when you have to make a change half way. We know of a man who has shipped the Wild Goose plum in great quantities to a town in north Minnesota, and has made it pay. The fact which makes this variety safe and desirable is this, it is so early that it will not have to compete with the heavy crop which comes later in all good plum years. We would advise him to plant this one, and for the same reason he had best plant the Early Richmond cherry. You may be sure there are dozens of towns in the north where cherries are rarely seen for sale, and there are young people by the score and hundreds who actually never saw the fruit. Both plums and cherries for this market should be boxed and shipped in cases. The expense of growing them is light, after the trees are once started, and the selling price to the consumer will be chiefly the express charges.

The fruits in that market can be sold readily at fifteen cents per box, and after paying the shipping charges and allowing the retailer a reasonable price there should be a comfortable margin for the grower, over and above the picking and packing cost. And bear in mind that this northern market may be developed, indefinitely. There is absolutely no danger of your sending them more fruit than they can use.

If one would make a specialty of northern marketing, the two varieties named, planted in large quantities, are the best he can do.

When it comes to planting plums for the general local market, in competition with all the great varieties now grown and offered, select for size and quality, and you do better to have but few varieties, say two. The advantage is this, your packages will be uniform, made up of one variety only. Mixed packages will not sell as well. If you select two good sorts you can make them cover the season, one eary, and one late.

STARTING EARLY PLANTS IN HOTBEDS HEATED BY FIRE.

To the Editor of The Homestead:

Mr. Nipper, of Johnson county, Ill., has built up quite an extensive and remunerative trade by growing a variety of early plants in hotbeds. Thousands of these plants are sold to farmers and gardeners who do not care to operate a hotbed themselves. Mr. Nipper is a successful gardener himself and owes his success to knowing how to arrange and operate his hotbeds in order to secure the best results.

He selects a southern slope with perfect drainage and builds his hotbeds running from east to west so that the plants will get all the sunshine possible. The beds are seventy-five feet in length and of a width to suit the length of regular hotbed sashes.

Beginning, the furnace or fire box is dug to the depth of two and one-half feet gradually sloping the ground upward to about six inches deep. The flues are then dug, running lengthwise of the bed. These are six inches deep and eight inches wide, leaving a strip of earth between about three feet in width. Flat rock two or three inches thick are then placed over these flues and over this a layer of clay to fill up any crevices which may exist between them. Such a hotbed is provided with chimneys made of boards eight inches wide and five feet in length which are placed at the opposite end of bed from furnace where the flues terminate. Either coal or wood may be used for heating purposes. A frame of boards is then made beginning with the back wall which is one and one-half feet high and the front wall six inches lower to give sufficient slope to the sash. This makes it convenient when ventilation is necessary as the slope will allow the sash to slide down easily. This frame is nailed to stakes which are driven in the ground outside of bed and banked up outside to prevent surface water from running in.

Rich soil is filled in the frame to the depth of six or eight inches and over this a layer of well-rotted stable manure (fresh manure is never used in hotbeds which are heated by fire) which is well mixed with the soil underneath. Strips are nailed inside of back and lower boards of frame the entire length of the bed on which the ends of the sash bars rest and the sashes are moved when ventilation is necessary. A thermometer is placed about five feet back from the furnace in an upright position in the seed bed to the depth of two or three inches.

Mr. Nipper begins heating his hotbeds about ten days before the seeds

SEED CORN

My famous high yielding strains, bred for high yield, strong stalks, freedom from barren stalks; 10 to 40 bushels per acre increased yield assured if you plant my seed. Every ear grown on my farms. Selected in early fall and dried on rack. Practically 100 per cent strong, every test. Get my corn booklet No. 3, describing my work with corn. C. Ray Moore, Box 33, Kellerton, Ia. "The man who does things with corn."

SEED OATS

Regenerated Swedish Select from seed bought direct from the introducers, The Garton-Cooper Seed Company. Latest improved strain. Recleaned and shipped in new 2-bu. bags. Prices: 2 to 10 bu., 85c per bu.; 10 bu. or over, 75c per bu. Address **HENRY MEISSNER, LEIGHTON, IOWA**

are sown. When the bed is sufficiently warm, about 90 degrees at first the drill rows are marked off crosswise of the bed four inches apart and the seed sown thickly and covered lightly. After the seed bed has been heated to 90 degrees and the seed sown the heat need not be so great except when the weather is very severe. The fire is regulated according to the weather. On real cold days and frosty nights the beds are covered with straw, which is removed when the weather moderates and is sunshiny again. Mr. Nipper begins operations about the first of February as he wishes the seed for early plants to be sown by February 14th at the latest.

Such a hotbed as above described will last four years without any other labor except to replenish the soil every alternate year. The cost of building will not exceed $12 minus the glass sashes. Mr. Nipper makes a specialty of growing cabbage, tomato and pepper plants. Besides many other plants are started in these hotbeds which are transplanted until the season arrives for setting them in the garden or field. J. T. McCoy.

PRUNING APPLE TREES.

If your apple trees have been started right in the nursery, you will have, when first planted, one straight stem with a few small side branches. No nurseryman who understands his business will send out trees, with bad forks, double stems of nearly the same size. But if you have such promptly cut one of them.

As the tree grows the ideal aim should be to maintain the same symmetrical proportions, always a main stem, and smaller side branches. To maintain this relation of main stem to side branches requires great watchfulness, and what is called thumb pruning. That is pinching off the unneeded shoots while they are still small. This is the easier way of pruning, but it requires care, and a keeping in mind, of the proper shape of tree when it is developed.

But June, when this thumb pruning should be done, is a busy month, and it is usually neglected. This would not be so bad, if we would make a business of trimming trees once a year. But we are too busy for that, even, and we wake up after three or four years of neglect to find that our trees are in bad shape. Fortunately our apple trees will stand a vast amount of abuse and neglect, and still recover and be profitable. In trimming such a neglected tree, half of the top should be removed. Nature, left to herself, will grow twice as much wood as is needed for good fruit. The necessity of having plenty of bearing surface is so important that nature overdoes it. The best time for this trimming is in October or November, for that is the time of your comparative leisure, and the leaves having dropped, you can see perfectly the shape of your tree. In the first place, cut sparingly upon the south side of the tree. Encourage the top to grow upon that side, for as a rule our trees incline to lean to the northeast, and you need the top upon the southwest to shade the body of the tree from the warm spring sun.

Then whenever two branches cross remove one of them. And where a crotch has been formed which in time would split down, to the ruin of your tree, remove one of the stems. This is a method of life insurance for your tree. Having done this much, step back and study the tree to see if it is symmetrical. You will note perhaps, that some branches are too long. If so clip the ends. Again you will see that in places the top is still too thick. There are two branches where there should be but one. Remove the weaker of the two. Make the top loose and open so that the sun can reach every part. The principle to consider is this: You cannot have good apples unless the sun can reach them to give them color and flavor.

The tools to use in this work may vary, but a small, sharp saw is very convenient. And a good heavy jackknife in good condition will fill the bill. Some recommend a chisel and mallet, and a hatchet, while a rough implement for work requiring care, is sometimes used. But whatever the tools you may use, make clean cuts, close to the trunk, and paint every wound which is a half inch or more in diameter.

A liquid grafting wax or a thin paint of white lead will do. This application will not only prevent the bleeding, but will prevent the checking when the hot sun strikes the cut. This cracking open of the wood admits water, and when water is absorbed rotting soon begins, and your tree is weakened by a rot which soon reaches the heart. But if the grafting wax is applied new bark will form over the cut before rot begins.

INTENSIVE ONION CULTURE.

To the Editor of The Homestead:

As different localities will call for different methods of farming and different crops to be raised, I do not think it best to lay down any iron-bound rule for any man to follow. What I want to impress upon the mind of the reader is the importance of intensive farming, and the profit as compared with extensive farming.

Three years ago I tried an experiment with one-fourth acre of Red Clove onion. I selected what I considered the best onion land I had. I had been raising these onions many years, but thought I would see what could be done on a small piece of land properly handled. I prepared my land in the fall of the year, prepared it well too, and planted my onions as they should be. I planted the cloves, as they make onions, and the onions make cloves.

Early the next spring when the ground was in good condition for work I began to cultivate them, and gave them what I considered the very best of cultivation for the development of the bulbs, and when the weather began to get dry I supplied the needed moisture from a near-by stream. When gathering time came I was pleased to gather from that one-fourth acre, 250 bushels, of nice marketable onions, and sold them to a buyer for $1 per bushel.

After I paid all expenses, including everything to make the crop and market it, I had left $125. This, however, was not extremely large, but a good yield. The following figures will give some idea of the cost of producing a crop, or as near as I can estimate it:

Plowing and preparing the land which required several times of disking, harrowing, dragging, etc., counting man and team at $3 per day, four days, $12; planting the crop, hiring help at $1 and $1.50 per day, $25; cultivating the crop, which was very great, $50; harvesting and housing, $20; marketing the crop, $18; total amount, everything considered, $125. Received for the crop of 250 bushels, at $1 per bushel, $250; paid out for labor of all kinds, $125; balance, $125.

This I consider is a little above an average for such crops, but I was trying to see what I could do with a small area of land.

I find from several different trials with different things that it is much more profitable to have a little area well tilled than to go over a large area and not thoroughly cultivate it.

Of course, onions might not suit every farmer, but there is an endless chain of things produced on the farm that will bring handsome profits when properly handled. I find one of the greatest secrets of success lies in being able to find a good market, otherwise the best stuff would become profitless

I would advise the reader to decide on what you want to raise and then get all the information that is possible and then try to profit by same, I have found that the knowledge of what to do, how to do it and then doing that which is best is the secret of success on the farm, large or small. Subscriber.

TREATMENT OF POTATO SCAB.

The disease known as scab in potatoes causes a heavy annual loss to the farmers of the corn belt. The disease remains in the ground from year to year so that if the same soil is used the second year for potato growing even the planting of scab-free seed will not prevent the crop from being diseased. It is a well-known fact that fresh manure contributes to the development of this disease and because of this old manures are recommended for the potato ground.

Treating potatoes to destroy scab

SEED OATS

FIVE BEST Swedish Select and Kherson, bred for heavy yield and strong straw. Also **SEED CORN** Four of the very best varieties, all carefully grown and selected. Also other farm and garden seeds. Write for prices today. Mention The Homestead.

FRANK J. RIST, Humboldt, Nebraska

ALFALFA $9.75 Per bu.

Best Non-Irrigated Seed—99.6% Pure

95% Germination absolutely guaranteed. No seed better. We sell good seed for $8.00. Also have Turkestan alfalfa. Write now for free samples and save money. Our 76-page book sent Free, giving valuable information on growing alfalfa. Write today.
A. A. BERRY SEED CO., Box 403, CLARINDA, IOWA

Strawberries

FOR 40 years we have specialized on strawberry plants, and can furnish most any variety in any quantity desired at money-saving prices. All plants guaranteed. Send for money-saving list and full description. **Geo. W. Bridgman Nursery Co.,** Dept. A, Benton Harbor, Michigan.

SEED CORN THAT TESTS

95 to 100 per cent—Paradise corn; germination guaranteed. Test the corn yourself 10 days. If not satisfied return at my expense and I will refund money. This corn is an early corn. It never fails to mature. It is a deep yellow, deep heavy grain, a little rough. I will send sample to any address, $2.50 per bu. **John Paradise,** Barnes City, Iowa.

SEED CORN

WE make a specialty of Reid's Yellow Dent corn. Standard type. Bred to yield. Picked early and dried on racks. Germination perfect. Send for catalog and prices. **Sommer Bros., Pekin, Illinois.**

SEED POTATOES

NORTHERN WISCONSIN GROWN, pure-bred "Conrath" stock, standard varieties of high vitality. Big yielders. Plant something good this year. Illustrated catalog FREE. **NORTH WISCONSIN SEED CO., Box 1, Conrath, Wis.**

Cow Peas and Soy Beans

Write for Samples and Prices. Address,

JAS. S. EVANS & SONS, Vandalia, Ill.

Kherson Seed Oats

MOST productive in seven-year test at Iowa and Nebraska stations. Twenty bu. or more, 65c a bu.
GEO. GREGORY, RALSTON, IOWA
C. & N. W. main line.

250 Strawberry Plants $1

OR 100 evergreen seedlings $1.00, or 75 raspberry plants $1.00. Write for catalog and premium list. Address West Side Nursery, Box 1, Postville, Iowa.

SEED CORN

Reid's Y. Dent, Gold Leaming, Boone Co. White, 90 Day Y. Dent, for northern farmers. Early picked and dried on a rack. A post card will bring my 48-page Seed Corn Book. It's free to you, ask for it now.
H. Z. O'HAIR, - BUSHTON, ILLINOIS.

SILVER PLUME

A BEAUTIFUL medium, early white oat with the stiffest straw and heaviest yielding qualities, 85c graded and sacked. Send for post card. Address
W. C. BRYANT, PRINCETON, ILLINOIS

OWL BRAND COTTONSEED MEAL

41% Protein guaranteed. Great Milk and Beef Producer. Get our free booklet, Science of Feeding. Address
F. W. BRODE & CO., MEMPHIS, TENNESSEE

SEED OATS

Reg. White Bonanza, National, Emperor William oats, Oderbrucker barley, Ida County Yellow Dent corn. Price list and samples free. Address **ALLEN JOSLIN, Holstein, Iowa.**

KHERSON SEED OATS

BEST oats to grow, price 60c per bu., bags free. Also prize-winning Reid's Y. D. seed corn. Ask for free booklet on oats growing. Cloverdale Farm, South Amana, Ia.

Clover

Timothy, Barley, Sweet Corn and Field Corn, Pumpkin, Swedish Red Oats, Watermelon Seed, Alfalfa, Millet, Cane. Write for prices and sample. Satisfaction guaranteed. Hawkeye Seed Co., Lockridge, Ia.

SEED CORN

Johnson Co. White, Reid's Yellow Dent; high yielding, fine show corn. Won sweepstakes in state and local 1912 shows. Write for circular. **JOHN A. STAINBROOK, Route 9, Franklin, Ind.**

Sweet Corn Seed For Sale

1912 GROWN, Evergreen sweet corn, grown from Connecticut seed; price $2.00 per bu.; no charge for sacks. **TIPTON CANNING CO., B. R. McGirr, Mgr., Tipton, Iowa.**

SEED CORN, TIMOTHY

and Millet seed that will grow, at farmers' prices.
EDW. DOOLEY, - - SELMA, IOWA.

SEED CORN

REID'S Yellow Dent, Boone County White. Individual ear test. Shipped, crated, at $3.25 per bushel. **E. S. DYAS & SONS, Bellevue, Iowa.**

WANTED--RED CLOVER

Alsyke, Timothy, Mixed Alsyke and Timothy, etc. Send samples stating quantity. The Adams Seed Company, Box 18, Decorah, Iowa.

SEED CORN

Hecker's Improved Red. High yield and early maturity. Happy Home Farm, Amboy, Ill.

SEED OATS, Reg. Swedish Select. CLOVER, Med. Red. Ask for samples and prices. Address H. D. CLORE, Lucas, Iowa.

REGENERATED Swedish Select oats. Recleaned 50c bu. Mandscheuri barley 75c. Clover and Timothy seed. Samples. B. S. Strayer, R. 1, Hudson, Ia.

Kherson Seed Oats The best early variety for upland seeding; great yielder, fine to seed grass with. ABSOLUTELY FREE FROM SMUT, clean, bright seed, recleaned, high test. Also Swedish Select, a widely advertised variety, but I recommend Kherson as best corn belt variety. Get my Booklet No. 3, describing these and other farm seeds. C. Ray Moore, Box 33, Kellerton, Ia. "The man who does things with corn."

SEED CORN Seed corn that is seed corn. All extra selected, tested premium corn, Reid's Yellow Dent. Sample ear by mail 15 cents. Circular Free. The All Grow Seed House, Knoxville, Iowa.

SEED CORN AND OATS MERRITT'S pedigreed corn, regenerated Swedish Select and Kherson oats—SELL ON THEIR MERITS. MERRITT'S free book tells all. Address Quietdale Farm, R. 2, Kellerton, Ia.

A Corn Grader—A Grain and Grass Seed Cleaner
Two Machines in One.

It's exactly what you get in the Newton grader and cleaner. It grades corn in a most satisfactory way. Cleans and grades all kinds of grass and field seeds. Hundreds in use on the farms of successful farmers.

The Newton
Separates Oats from Wheat.

No other grader on the market will give you better work than the Newton. Few will come anyways near doing the work it will do.

Ungraded Seed Doubly Unprofitable.

The danger in sowing weak, shriveled grains does not lie alone in the fact that they do not grow, but by leaving vacant space you allow weeds to get a start which injure neighboring stalks. With the Newton grader you take out the light and chaffy grain, leaving only the plump, well-matured grain for seed. Grading your grain this year should save the price of our grader on the larger yield of the season's crop, and the grader will last many years. Don't take our word for it. Ask the college experts and they will tell you we are right.

Get the Newton Catalog Write us today and get circular telling all about this simple, practical, big-capacity corn grader and grain grader and cleaner—two machines in one. It tells all about its many points of advantage over other machines.

BERGMAN MFG. CO., - NEWTON, IOWA.

PURE-BRED SEED CORN

BUY your seed corn from a farmer's company at farmer's prices. Seven varieties—Reid's Yellow Dent, Iowa Yellow Dent, 90 day; Farmer's Friend, Iowa Silver Mine, Boone County White, Big Bloody Butcher and other varieties. Gathered in September and October. Prices for shelled and graded $1.75, for selected ear seed in bags $2.25, crated ear seed $2.50 per bu. 15 lbs. any variety free with five-bushel orders or over. Only one grade, it's the best. We ship on 12 days' approval. Write for circulars and free samples to BOTNA VALLEY SEED CO., Box E, Lewis, Iowa.

FARM SEEDS Choicest varieties of Seed Oats, Wheat, Spring Rye, Speltz, Barley, Cane, Seed Corn, Dwarf Essex Rape, Clover Seed, Potatoes and all kinds of field, grass and garden seeds. Large illustrated catalog of great value to farmers free. Mention this paper.
Iowa Seed Co., Dept. D Des Moines, Iowa.

BOYS' AND GIRLS' CLUBS.

By H. A. Crafts.

IN ORDER to awaken an interest and create an enthusiasm among the school children in the study of agriculture the California schools are adopting the very commendable method of organizing boys' and girls' clubs.

In organizing these clubs the members agree to study together about agriculture and domestic art, make gardens for home and school, and try experiments for the improvement of crops.

The chief purpose of these boys' and girls' clubs are stated as follows:

First—To afford the teacher a simple and easy method of teaching practical agriculture and domestic arts in the best possible way, namely, by actual work in growing plants, rearing animals or preparing articles of food or clothing.

Second—To show that there is more is a simple operation requiring only that the potatoes be immersed for a period of two hours in a mixture of one pint of formalin to fifteen gallons of water. Considerable latitude may be allowed for the ingenuity of the average man in this matter. A very good plan, if a large barrel or hogshead is available, is to place the potatoes in gunny sacks and immerse them for the length of time mentioned so that the sacks are entirely covered by the water-formalin mixture. We have known instances where feed baskets were used for the purpose in which case it is a simple matter to pour off the solution when the seed has been treated.

It should be remembered that formalin is not a dangerous substance to handle, because when diluted with water in the proportion of one pint to fifteen gallons it is not poisonous, though, of course, in the pure state it must be remembered that formalin is a powerful disinfectant. The use of a diluted solution in feed baskets in no way poisons the baskets.

in the soil than the farmer has gotten out of it; to inspire boy's with a love of the land, by showing them how they can get wealth out of it, and thus be helpful to the family and the neighborhood; to inspire girls with an appreciation of domestic arts by helping them to discover what they themselves can do in bettering their surroundings.

Third—To give both boys and girls a definite, worthy purpose and to stimulate friendly rivalry among them.

As to ways and means in getting the clubs started, and rendering them popular among the pupils, it is suggested that the principal special supervisor or superintendent will only be too willing to arrange meetings and render assistance in the work of organizing the clubs. The teacher will also delight to be a learner in common with the pupils while leading in the making of plans for study, contests or exhibitions.

The co-operation of local grangers, farmers' unions, farmers' clubs, chambers of commerce or boards of trade may also be readily enlisted in furthering the work.

Further assistance is to be secured from instructors in agriculture in normal schools, farm schools and high schools.

The College of Agriculture, University of California, will answer all inquiries lodged therein in reference to the formation of clubs and institution of courses of study, while the secretary of agriculture, Washington, D. C. will send, free of cost valuable pamphlets, farmer's bulletins, ets., that may be made of good use in the club studies and club activities.

Boys' and girls' school agricultural clubs are advised in the preparation of their work to choose subjects which will be of interest to the greatest number of members. Separate clubs will be organized in cases of a divergence of interest between boys and girls. The latter will have their own clubs for the study of cooking, sewing, etc., while exclusively boys' clubs will be organized for the special study of such crops as potatoes, wheat or cotton.

At the same time many clubs will be co-educational, such for instance as will study the raising of sweet peas, trees, poultry or butter making.

These lines will be made to lead up to contests and exhibitions.

The following plan has been suggested for the getting up of contests:

Class A, for boys—1st, crop growing—potatoes, wheat, corn, lima beans, sugar beets and cotton; 2d, hog raising.

Class B, for girls—1st, cooking; 2d, sewing; 3d, canning.

Class C, for both boys and girls—1st, sweet pea growing, poultry raising, butter making, tree growing.

From this the pupils may go on to a wider class of subjects, such as squab-raising, rabbit-raising, bee-keeping, rose-culture, chrysanthemum growing, etc.

It is maintained that a school, or a town, or a group of schools or towns through the agency of their clubs should hold exhibitions, in which they may display the products grown on articles cooked, sewed or canned, certificates and badges to be awarded to all who excel in their exhibits.

Two grades or standards of excellence will be recognized by both certificates and badges, for those achieving first grade, and only the certificate for those attaining second grade, individual cash prizes are depreciated.

Some suitable reward to the club collectively will be made for the largest number of individual certificates secured, as an incentive to good team work and community interest.

Agricultural education is receiving due recognition even in Finland. In 1910 over a hundred institutions in that country received government aid for agricultural instruction. Among these institutions were six itinerant farm schools extending through two months; two farm schools with two winter courses and sixteen with one winter course and twelve public high schools offering agricultural instruction.

You can't think "silo" without thinking of the "INDIANA SILO"

You can't look at *any* Silo without mentally comparing it with the Indiana Silo. You can't read about the value of silos *in general* without remembering some *special* advantage possessed by the Indiana Silo exclusively. For example, there is the method by which the two-piece staves are joined in the

INDIANA SILO

Look at the picture. Notice the air-tight, self-draining, all-wood mortised joint. That patented joint has revolutionized the whole business of building silos by making it possible to construct a perfectly solid stave silo of any desired height. When put together with a little white lead at these joints, a two-piece stave Indiana Silo is as good as if it were made of one-piece staves, and very much less expensive. There is no metal at these joints to become corroded by the acids and no outside moisture can collect in them to rot the wood. This joint adds years to the life of your silo and many dollars to its value, as proven by experience.

When you buy an Indiana Silo you not only secure this scientific and permanent form of construction but you know that it will go up easily and will stay up for years and years without repairs.

Order now—today—on our easy buying plan.

WRITE today for our catalogue and a free copy of the book "Silo Profits", which is the story of the Indiana Silo as written by scores of owners of Indiana Silos. And ask us for the name of our representative in your locality.

"You *buy* an Indiana Silo—but it *pays* for itself."

Why I Bought the BEATRICE Cream Separator

The first great big reason is that it's the only really high-grade separator sold at a reasonable price. Separators have been costing too much money—no doubt about it.

I'm talking about the high-grade separators, of course. Their prices are the same they were many years ago—$100 up to $110.

The Beatrice established a new order of things. The price of the very largest size Beatrice, capacity 950 to 1000 pounds, is only $75.

I bought that size—my saving was $35. Smaller sizes cost $55 and $65. Why should I or any other dairyman pay more than the Beatrice price?

We would get no more for our money.

The Beatrice has everything that goes to make a cream separator valuable. Easy running, durable, a close skimmer, remarkably easy to clean, gets thick, heavy cream.

I'll have something to say on each of these points in later talks. Watch for them. Price is only my starter. In the meantime, remember how I saved $35.

Save $25 to $40

Farmer Onswon is right. Ask the Beatrice dealer. If none near you, write us for catalog and particulars. Address nearest office.

BEATRICE CREAMERY COMPANY

Chicago, Ill. Lincoln, Neb. Des Moines, Ia. Dubuque, Ia.

40 BULLS 40

PURE-BRED registered Holstein bull calves, from 1 to 12 months old. An extra choice lot, most of them sired by our great herd bulls, and many of them out of high record cows. Our prices are bedrock. We are short of room and must sell at least 20 of them in the near future. Send for price list.

WOODLAWN FARM CO., STERLING, ILL.

INGLESIDE GUERNSEYS

MAY King and Glenwood families, 38 advanced register cows. All mature cows in the A. R. Largest herd of registered Guernseys in Illinois. Bull calves and a few heifers for sale. Send for catalog. T. W. BROPHY, Proprietor, 81 E. Madison Street, Chicago, Illinois.

DAIRY

COMPARING THE MILKING MACHINE WITH HAND METHODS.

As the result of experimental work carried on for five years at the New York experiment station, the conclusion was reached that machine milking if properly done does not influence the flow of milk to any extent capable of measurement. In a bulletin from that section it is pointed out that not every good hand milker would be able to handle a machine with equal success; but no remarkable qualities are necessary for efficient machine management. During the tests of the B-L-K machines at the station, six men have run them for periods varying from three months to three years and none of them has failed to do fairly satisfactory work with the milkers. These men probably represent fairly well the better class of farm workmen; and none of them was selected for any special ability to operate machinery. The essential qualities in running a milking machine are merely carefulness, willingness to follow instructions and reasonable intelligence.

In station work it has been necessary to weigh and record each cow's milk separately, so that it has been inadvisable for one man to handle more than two machines, each milking two cows, and the operations have undoubtedly been done a little more carefully and a little slower than would be necessary in a commercial dairy. The data given for labor are therefore very conservative. They are based on accurate records of the time consumed by each step of the afternoon milking on 144 days in 1911, and on records of the time required each day for a month in washing and otherwise completing the cleaning of the machines, this last work being done in the dairy building, not at the barn.

Based on the use by one man of two machines in milking fifteen cows, the time consumed each day would be as follows:

Preparing machines night and morning	6.72 minutes
Milking 30 cows (15 night and morning)	88.20 minutes
Rinsing machines at barn night and morning	15.36 minutes
Cleaning teat-cups and tubes (done weekly)	2.61 minutes
Washing remaining parts of machines	8.13 minutes
Total time required to milk 30 cows	121.02 minutes
Average time required to milk one cow	4.034 minutes

Under commercial conditions this time could be decidedly lessened; and the advantage would increase as the number of cows milked increased. Fifteen is probably as small a number as will be found profitable in connection with present machine milking; since with this number of cows approximately one-third of the time is spent in operations other than the actual milking. As the number of cows increased this extra consumption of time would become relatively less and the average time required for each cow would decrease. It is possible, also, where detailed records are not kept, that one man could handle more than two machines and thereby reduce the labor cost.

As station figures show that it takes seven minutes for a hand milker to milk a cow, record the weight and pour the milk on the cooler, it is evident that the machines do economize labor. As to whether, or under what conditions, their installation would be financialy profitable, data are lacking. Owing to rapid and repeated changes and improvements in the milkers used in these tests and the substitution of new pails and parts, it has been impossible to measure the deterioration of the machines or to get any very definite idea as to the cost of maintenance. Until these data can be secured, possibly not for a long period of time, each herd owner will have to decide for himself whether the saving in labor indicated above will justify him in installing machine milkers.

The station experience proves that such machines, at least the one used by us, can be readily handled by the better grade of farm laborers, that they can be made to produce milk with very satisfactory bacterial counts, that they do not injuriously affect the flow of milk and that they will lessen the amount of human effort necessary to milk cows.

"STRONG" BUTTER.

To the Editor of The Homestead:

The following inquiry has been received from one of your subscribers:

I have three cows, one three years old and one ten years old, both fresh in September, and one ten years old that will be fresh in February. About four weeks ago my butter began to get strong right after churning. I thought it was the milk from the cow that was to be fresh soon, so I quit using her milk and the butter is just the same. At first I fed soft corn on cob, corn fodder, timothy and millet hay and alfalfa hay, giving each cow a big bucketful of corn night and morning. Thinking perhaps the corn might be causing the trouble I fed about half as much for about two weeks to no effect. They have good clean barn and good water, which is heated by a tank heater. I al-

Producing Jersey Cows

I HAVE for sale cows and heifers of the most popular producing strains, and at quite reasonable prices. Would also spare a few choice young bulls. 2 mature Shropshire rams, a number of ram lambs at farmer's prices. Geo. S. Redhead, Des Moines, Ia

A valuable Free Book on CLOVER

A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." This book is truly a most remarkable source of information on the subject of clover raising. For the first time the opinions and experiences of the world's greatest clover authorities and practical growers have been gathered together in printed form. Every question you can think of is fully answered. It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and more milk—that puts immediate cash money in your pocket. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; it tells all about the causes of "clover sickness" and how to deal with it. These and hundreds of other questions are answered, covering sixteen clover varieties, including Red, Mammoth, Crimson, Alsike, Sweet, White, Yellow, Japan, Berseen, Burr, Serradilla, etc.

This book is a gold mine of information to the farmer who is looking for bigger and better results. Ordinarily this book is sold for 35 cents per copy, but for a short time we will mail a free copy, postage prepaid, to the readers of this paper, or until a certain number have been distributed. If you will write at once you will be sure of getting a copy by return mail.

D. R. Sperry & Co., Batavia, Ill.

ways wash my cows with warm water before milking. My cream is skimmed by hand and I wash and scald every piece I use. Lately I have been feeding just a few apples and carrots night and morning, but cannot see that they help any.

Without being present during the entire process of preparing the cream and making the butter as well as the keeping of the butter after it is made, it would be very difficult to determine exactly what the cause of the trouble is. It would seem that this man is a careful and painstaking person and apparently is complying with every law of hygiene and sanitation. Sometimes, however, when cows are on dry feed and when the feeds are not properly balanced, especially after the cows have passed half of their lactation period this difficulty is experienced. There is often difficulty in churning the cream also and the cheese maker often complains of the same trouble.

The communication does not state where the cream is kept. It sometimes happens that cream is kept in the kitchen or in the cellar before it is cooled down sufficiently and as milk or cream is very sensitive to odors when warm the butter is affected. Sometimes at this season of the year the cream has to be kept too long before it develops the acidity required that it permits putrefactive bacteria to develop to such a degree that they overcome the desired acid bacteria and leave only undesirable conditions. It is a well-known fact in science that acid bacteria cannot grow in low temperatures, while some of the putrefactive forms can grow and develop bitter and astringent tastes and make the butter smell and taste old.

Without knowing any more about the manner of handling the cream I will venture to make a few suggestions hoping I may be able to help this subscriber out of his difficulty. Set the milk in a cold, clean place as soon as possible after milking. If you used a separator it would be far better. Skim the cream as thick as possible. Then use a good commercial starter so as to get it into the churn as soon as possible. Do not feed the carrots until after milking. If these few precautions do not overcome the difficulty then try feeding a balanced ration. In that case it would be necessary to add two or three pounds of oil meal or cottonseed meal or some other feed rich in protein to balance the feed already being used. However, I think if the above advice is followed in preparing the cream and making the butter the trouble will be eliminated.

O. O. Brewbaker.

CHURNING-TIME "DON'TS."

To the Editor of The Homestead:

Don't churn market butter till the cream is proporly soured.

Don't expect sweet cream to churn as easily as sour; although the quality of the butter will be better.

Don't put cream into the churn till that vessel has been well scalded out; then rinsed copiously with cool water.

Don't put the churn over half full of cream. If it is only one-third full it will give more space for the splashing and agitation of the cream, which is necessary in breaking up and separating the globules of fat.

Don't churn in less than from twenty to thirty minutes, as the fat globules are liable to be injured, and some of them be left in the cream, if the operation is performed too quickly; while the quality of the butter is apt to be affected.

Don't try to churn cream where it is cold enough to froth when agitated. Put the cold cream into the churn, set it into a large vessel of warm water (tub, boiler or large pail) and let this raise the temperature to a proper point for good churning.

Don't attempt to warm cold cream by pouring hot water into it, as this would raise the temperature too suddenly, scalding the cream and making it difficult to churn. At the same time, there would be a loss of butter, and the product would be of a sickly-white color; while its texture would be open and flabby, its taste and appearance more of a greasy nature, the flavor poor.

Don't forget that the working of butter after it begins to gather, is really of more importance than the churning. As soon as the grains of butter become the size of wheat

DE LAVAL CREAM SEPARATORS

TIME TESTED

If a member of your family were dangerously ill you wouldn't think of calling in an inexperienced doctor?

Certainly not! You would call a physician, who had built up a reputation, a man with experience and a successful practice.

Why not use the same care and common sense in your selection of a cream separator?

Every little while you hear of some new cream separator, claiming to be a "world beater" and just as good as the De Laval but a little cheaper.

These "mushroom" machines stay in the limelight only until they are "found wanting" by the users and in a short time drop out of sight.

It takes years of experience to build a "good" cream separator. More than 30 years of experiments and experience have made the De Laval pre-eminently the best machine on the market for the separation of cream from milk.

Even were other concerns not prevented by the De Laval patents from making a machine exactly like the De Laval they could not build as good a machine as the De Laval, because they all lack the De Laval manufacturing experience and organization.

If you buy a De Laval you run no risk of dissatisfaction or loss. It's time tested and time proven. Why experiment? Why take chances with an inferior machine when you KNOW that the De Laval is the BEST MACHINE FOR YOU TO BUY?

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

THE DE LAVAL SEPARATOR CO.
NEW YORK CHICAGO SAN FRANCISCO SEATTLE

YOU WILL BE GLAD 730 Times a Year— That You Selected A GREAT WESTERN

Twice a day—730 times a year—for a *lifetime* — you'll be mighty glad you chose a *Great Western* Separator instead of any other.

Whenever neighbors are around while you skim—or when you happen to be at your neighbor's when he is skimming with some other make—you'll feel *proud* of *your* judgment in selecting a *Great Western.* You'll realize then, what Great Western

Quality

means to you. You'll realize what it means in close skimming, easy turning, easy cleaning and in bigger profits from *quality* cream and butter. Let us tell you the facts.

The Great Western *bowl* follows nature's laws by delivering the *cream* from the *top* and the *skim milk* from the bottom. There is no chance of their mixing—so you get the utmost in quantity and quality of cream—even when skimming COLD milk.

The bowl of the Great Western is self-draining and self-flushing. There are no long tubes, no minute slots, nooks, corners, crevices or ragged edges to hold milk and collect dirt.

The Great Western is ball-bearing throughout. The balls we use are absolutely uniform in size and test 50% to 100% harder than balls others use.

The ball races in the Great Western are tempered so hard that you cannot cut them with a file. That is why the Great Western beats them all for easy running and long service—why it is positively the greatest and undisputed

Value

ever offered in a cream separator. We will arrange to give you any kind of a trial you want on any size Great Western.

Test it yourself on every point, close skimming, ease of turning, ease of cleaning, sanitary construction, quality of cream, quality of butter and every feature that means durability—the most cow profits for the longest time.

Our 5 year guarantee and Security Bond prove our confidence in the Great Western.

Write Us Now

Let us send you our big book on more dairy profits. See how you can make from $10.00 to $15.00 more each year from every cow you milk. See the only separator that follows natural laws. The only separator cleaned in a jiffy. Skims warm or cold milk to a trace.

Write for our fine book today.

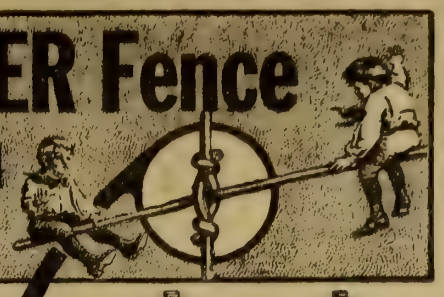
This BETTER Fence
Follows Every Hill and Hollow



THE *swinging joint* allows *Apex Fence* to conform to the roll of the *land*. The upright stays clasp the line wires firmly, yet the line wires swing up or down hill or hollow, while the stays always stand plumb. It is the easiest fence to put up—no buckling or straining, no sagging or lopping. That makes a better fence, and *saves money* on the first cost.

APEX FENCE
TRADE MARK

Many Other Advantages Besides the Swinging Joint

The swinging joint makes Apex Fence the best fence bargain even if it were no better in other ways. But to make every part of the fence as good as the joint, we use only high-grade genuine *Open Hearth Steel—galvanized* by the most thorough and modern process that brains and money have been able to discover—and *guarantee* Apex Fence to *satisfy*.

Let us tell you some things worth while about fence. Let us prove that Apex Fence costs less per year than any you have had. We save you money in repair cost as well as first cost. Get the best you can buy and you will be pleased. Apex is now on thousands of farms giving the best of satisfaction. Shall we send you letters to prove it?

Get All Facts Before You Buy!

Don't buy a rod of fence for *any* purpose until you get our booklet. Just tell us about how much fence and what heights you'll need, and when you expect to put it up. Also tell us at what town you buy your fencing. We'll send you our free booklet and important facts, with an interesting proposition. We may have an Apex dealer near where you can see the fence. In any case, you will be supplied with fence promptly at the right price. Address

DES MOINES SILO

Built for Permanence
First Cost Is the Last Cost.

Creosote dipping adds, according to Government reports, 17 to 20 years of life to the Silo. That is the reason the Des Moines Silo is dipped in creosote. A special dipping plant was built at great cost to add this feature to the already superior construction of the Des Moines Silo.

The creosote penetrates into the wood covering every check and going deep—making the wood absolutely impervious to moisture, thus preventing rot and in a large measure overcoming the shrinkage and swelling due to changing atmospheric condition. It is never necessary to paint the Des Moines.

Des Moines Silos are equipped with spring lugs that overcome the last possibility of the hoops becoming loose. The Des Moines Triple Anchor System and three inside hoops are the best in the world. Positive insurance against damage by wind. Other buildings may go but the Des Moines Silo will stand.

The story of the Des Moines Silo is told in a book that will be sent free.

Holstein Cows and Heifers at Bargain Prices

ON account of shortage of ensilage crop in N. Y. state I am shipping west 300 head of high-grade Holstein heifers and cows, 2 to 5 years of age. These are arriving in lots of 50 every week and I will make attractive price to men that can handle a car load. All tuberculin tested and bred to registered bulls. Also few registered bulls ready for service. ROCK BROOK FARM, STA. B, OMAHA, NEB

grains rinse the sides and lid of the churn with cool water, give a few gentle strokes with the dash, let the churn set a few moments; then drain off the milk. Remove the butter from the churn to a clean vessel, work the milk from it with a firm, even pressure (not by long, smearing strokes), rinsing it with a little cool water during the operation.

Don't cheat your customers by oversalting butter in order to make it weigh heavier or kill the strong flavor. Salt it when you start to work the milk from it, putting in enough to make it just a little saltier than is desired, and by the time the milk is all out, it will wash out much of the salt, leaving the butter about the desired taste. There is no set rule for salting butter, as some of it will require more than other. The taste is the only method by which one can ascertain the amount required to the pound. Use only the very best and highest grade dairy salt for seasoning butter. Coarse salt not only settles through the butter in large lumps that are very disagreeable to the taste, but it will not enter the texture of the butter and give it a uniform flavor like the finer dairy salt will.

Subscriber.

HINTS FOR BUTTER MAKING.

Keep the cream thoroughly stirred while ripening

The barrel churn is about the best farm churn.

Strain all the cream into the churn and add the coloring before beginning to churn.

Stop churning when the butter granules form about the size of a pea.

Too much working will make the butter salvy. Work it just enough to get out all water.

A good clean cellar, well ventilated and properly drained is a good place to ripen the cream. It is also a good place for churning.

Poor feeds, weeds and foul water will add a bad flavor to the milk. The hand separator should be used to separate the cream from milk. The milk can be given to hogs or calves while it is sweet and fresh.

BANKERS TO AID FARMERS.

If agriculture does not come to the front in Missouri it will not be the fault of theMissouri Bankers' Association., says The Kansas City Star. More than a thousand bankers in the state will see that bulletins on good farming practice issued by S. M. Jordan, the Pettis county soil expert, reach the farmers in all counties.

The bulletin to be issued by Mr. Jordan will give timely advice on farm management and the handling of crops. The bankers will distribute the literature. A committee of bankers is now polling the newspapers of the state to see how many publishers will print the Jordan bulletin entire.

A bulletin just issued by Mr. Jordan calls attention to the necessity of having clover seed tested, since the indications are that a very large amount of land will be used for clover this year. Clover seed will be tested free of charge in the seed testing laboratory of the Missouri Agricultural College at Columbia, Missouri.

Some samples that have been left at my office have contained from 5 per cent to 20 per cent of other seeds and trash, but this foreign seed, such as foxtail, pepper grass, buckhorn, bracted plantain, timothy, etc., come too high when you are paying clover seed prices for them. If you sow bad clover seed it is your fault.

The Pettis County Farm Bureau was the first of its kind published in Missouri. Mr. Jordan helps the farmers of the county to solve every problem.

Farm bureaus similar to that in Pettis county have been published, or are being established, in a dozen counties in Missouri. It is believed that the county farm bureau with an agricultural adviser in charge represents the long sought method of effectively and surely solving the many problems which confront the rural communities of the United States. The plan started in the South several years ago in order to combat the boll wevil, which was attacking the cotton crop. With some changes it has spread to the Northern agricultural states and is proving effective.

Ask your neighbor to subscribe for The Homestead.

Nets $14.00 per Ton From Ensilage in Champion Silo

C. L. Hurd, Mainright, Okla., bought 140 head of steers at $58 per head. Fed 200 tons of ensilage and $378 worth of cotton seed meal. Sold them for $81 per head, bringing $14 per ton for his ensilage.

Do You Make $150.00 Per Acre Profit on Corn

50 bu. of corn per acre at 50c brings $25. One acre of corn ensilage averages about 11 tons, worth $2 per ton. The difference between corn and ensilage pays for a Champion silo, the best in the world, because it has interlocking steel door frame, malleable lugs, steel anchors and inside hoop, etc.

POULTRY

SOME FACTS ABOUT BROODING CHICKENS.

To the Editor of The Homestead:

Since the object of incubation is to produce life, it is evident that the prime object of brooding is to preserve life. The object of every brooder offered for sale, however, is not so much to preserve life as it is to favor economical growth and to save labor. The hen will preserve life in a way better than the brooder, but she causes too much labor to be expended and is so costly that she cannot be used where large flocks are to be raised.

If you buy a brooder that will not favor rapid growth of the chicks at the same time, in an economical way, you had better burn the brooder and resume the use of the hen for she will prove the more economical of the two. The great fault with those who purchase incubators and brooders is that they judge the machine by its cost price and not by its real value. If you buy a brooder simply because it is cheap, you are running a chance of buying a death trap for your chicks.

The brooder that will prove a success must have plenty of light, for light itself is favorable to the rapid growth of chicks. It also is an enemy of disease in nearly every form, especially if the sun be allowed to shine in the interior of the brooder a few hours each day. It must be well ventilated for badly ventilated brooders will never raise healthy chicks. Plenty of pure, fresh air is needed to instill that vigor into the chicks that is so much desired. The brooder must have a large air space, for chicks require a large amount of air. It is a well-known fact that a fowl breathes seven times faster than the human person. It is evident that those brooders having small air spaces will not supply the chicks with good oxygen rapidly enough to satisfy their needs. The air will be consumed in a short time and the coop will be filled with carbon dioxide, which is the exact opposite of air (commonly called "breathed air").

These points must be remembered in purchasing the brooder. Buy those brooders that have a liberal amount of glass and that have a large air space. Remember that it is easier to heat that large air space than it is to supply brooders with small air space, with plenty of fresh air. The last point, which should not be forgotten, is to determine if the brooder will save labor. Since the object of using brooders is to save time and labor, it is essential that this point be considered in its selection. If it will not save labor, do not buy it at all, for the hen will prove more economical than a costly brooder.

There are two types of brooders on the general market today. They may be classed as those artificially heated, and the so-called fireless brooders.

The artificially heated brooders are those that are operated by means of heat generated, usually by a common oil lamp, and brought to the chicks either by means of water pipes or sections of metal that supply the hot air direct to the chicks. The general verdict seems to be in favor of hot water brooders for they supply a better heat. It is of an even nature and does not lack the moisture that seems to be missing in brooders heated with hot air.

These brooders are used more extensively than any other type that has been suggested up to this time. Many have found them economical, but the greatest economy is realized where they are used in large systems. They are all heated by one fire, which causes a great saving in oil and other fuel. We are inclined to think that the artificially heated brooder is a failure from an economic viewpoint, if used on a small scale. But where a hundred or two early chicks are desired it is one of the greatest helps that has been given to the poultry-raising public.

The other type of brooder that is comparatively new is the fireless brooder. It works on the principal of conserving the heat in the bodies of the chicks instead of supplying artificial heat for their needs and comfort. We honestly believe the fireless brooder to be one of the greatest inventions ever offered the public. From an economic point it is without equal, costing less than fifty cents and lasting a lifetime. It will brood up to fifty chicks in a flock and will brood about two flocks each season if used early in the year.

As in the case of the artificially heated brooder, we have given this type of brooder a thorough test and have found it to answer all the requirements of a good brooder. The only objection to its use, however, is that it must be used in connection with some other building. There is hardly a farm in the country that could not overcome this difficulty for there is always an empty loft or room that can be utilized. If this cannot be done you can build small coops out of scrap lumber that will answer the purpose.

In one test with the fireless brooder and the hen as rivals we placed fifteen chicks in a brooder that was supposed to accomodate twenty-five chicks. In another coop which was built exactly like the one in which the fireless brooder was placed, we placed hen and another fifteen chicks. So far as we could see the chicks in each coop were equally active, but at the end of the third week of the test, those in the fireless brooder were far in advance of those that were with the hen, and many were even feathering out in wing and tail. At the end of the sixth week of the test, those in the fireless brooder were almost twice the size of those with the hen and everyone developed into a strong, husky fowl. The hen killed two by stepping on them. At night they became overheated because the body heat of the hen and chicks combined was more than was needed and as a result the chicks were retarded in growth, which did not meet one of the essential requirements of proper brooding—rapid growth.

Another thing in favor of the fireless brooder is that it costs nothing to operate and involves no labor whatever, except a regular cleaning, which is necessary in all brooders. You need have no fear of the fireless brooder setting your house or barn on fire, or overheating or chilling the chicks and, at the same time, you can be assured that the chicks will keep as warm as nature intended that they should. In the wild state the brood did not return to the nest every night to be mothered by the hen. Instead they huddled up under some tree while the mother hen joined her associates among the branches. The hen never hovered her flock, in the wild state, except the first few days till the chicks attained an age sufficient to warrant their wandering about on their own accord.

There are many people who believe that the reason why their chicks are small and stunted is because of the poor service of the incubator, but half the time it is due to poor brooders. A poor brooder will stunt any chick, no matter how strong it may be when hatched.

The first four weeks is the most critical period of the chick's life and the management of the brooder during that time will have much to do with determining the future usefulness of the chick. You must be regular in your attendance of the little fellows and you must feed them intelligently. Above all, avoid corn as a food for chicks, as you would a plague. The best chicks we ever saw were grown without one single grain of corn in the ration. Corn is not necessary—just as good growth is obtained by the use of oats and wheat. Seeds of all kinds are good and nearer nature's original food than any other. Another thing to remember is to refrain from feeding wet or sloppy foods. Dry rations are the best.

Chesla Sherlock.

EGG EATING HENS.

To the Editor of The Homestead:

Perhaps a little actual experience with egg-eating hens will not be out of order. We had felt so proud of the number of eggs we were getting from our pullets that it was hard to convince us that they had acquired so ruinous a habit as that of eating their eggs. We thought it might have been an accident when we first found an egg shell in a nest, but to have it repeated over and over and to find the egg basket just the opposite from filling up, what must we believe?

Those pullets were covered with shining plumage and their combs were the most beautiful red, they had been supplied with generous grain rations and had water, but all these items did not dispute the fact that they were devouring their eggs. No matter how disagreeable the fact it had to be faced and remedied or off would have to come their beautiful heads. Of course, it was midwinter, just the time when Jack Frost and the sunshine were playing hide-go-seek and perhaps an egg had been split, tempting them to test the contents. But no matter the cause we could not have such a performance so we set our wits to work to devise a means of correcting it. The first conclusion was that an egg really is meat and water and that seemed to be what they were so ravenously hungry for. So we collected meat scraps and gave them a generous supply, not enough to hurt them but to satisfy their appetite, then the water, and we gave it as the Irishman voted, "airly and often" and had it well warmed. This menu was so satisfactory that the birds actually forgot the need of warm, fresh eggs and to such a surprising extent that we found no more

"Baier's" Automatic Chick Feeder and Protector

The greatest time and labor-saving device ever invented for the farmer and poultryman. This feeder works automatically and will supply from 300 to 400 chicks per day easier than you can feed a dozen the old way. It is 2½ feet wide, 2 feet high and holds from 30 to 40 pounds of feed. This feeder is made of heavy Galvanized Iron throughout and there is no reason why it should not last a lifetime. Ask your hardware dealer and if he cannot supply you, send us $4.00 and we will ship you one direct. Manufactured and sold by

shells in the nests. The egg basket mounted up even faster than before.

We learned our lesson so emphatically that we did not forget to supply the "ounce of prevention" by way of a basket of meat scraps hung safely in the henhouse where it would be convenient and thus make no extra trouble and we would not forget to furnish it to our hens each alternate day Martha M. Knudeson.

THE SPARROW A CURSE.

To the Editor of The Homestead:

I have noticed that someone is trying to pass a law in Iowa to exterminate turtle doves, claiming that they help to spread hog cholera by flying to different feed yards where hogs are fed corn or fattened and picking up loose kernels. I think such a law would be a great sin. English sparrows feed in such places a hundred times thicker than the doves and are more for flying over a large territory to get their meals in different feed yards. Everyone that has had cholera knows that they have been feeding a large bunch of sparrows at their feed lots.

The English sparrow is a curse in every way. They will soon exterminate our song birds in spite of everything we can do to save them. Who sees the martin nesting in the martin boxes any more? Where do you see the wrens and bluebirds raising their broods around our buildings.

Let us save the innocent, harmless doves that were our comfort and joy in pioneer times. John R. Millard.

It Pays to Test Seed Grains.

By H. L. Post.

THE importance of testing our seed grains previous to sowing and planting the season's crop cannot be overestimated. How are we to get the full benefit of our pure-bred seeds that have taken the college of agriculture years to bring up to their present high standard if we are not reasonably sure that the seed sown will produce strong, healthy plants. In Wisconsin alone the annual loss incurred by the planting of untested seed, amounts to hundreds of thousands of dollars. Then why do farmers continue this wasteful practice when if they would give a little time during the early spring and test their seed their increased yield would make it the most profitable piece of work done?

The testing of small grains and grass seeds is perhaps not so commonly practiced as the testing of corn, yet each farmer should do this before sowing. In a great number of cases the poor catch of grass seed or failure of small grains to come is due to the sowing of seed of low vitality which might have been avoided had the seed been tested previous to sowing.

Of course with the small grains a lower germinating per cent may be used than with corn, for the seed may be sown thicker, but do not use poor seed under any circumstances. In testing the small grains it is necessary to get a uniform sample of the recleaned seed by thoroughly mixing and if one has a large quantity to sow, it would be best to take several samples from the same lot and put in a germinating box such as used for corn. This is a much easier job than testing each ear of corn we are going to plant. A great many are under the impression that it is an endless job to test each ear of seed corn and that it does not pay because "father never tested his seed corn before planting" and they feel that a stand of 75 or 80 per cent is about all that can be expected. Experiments, however, show that under favorable conditions of weather and a normal absence of insect pests, etc., there is no reason why a stand of corn should be less than 95 per cent. Fifteen average ears of seed corn will plant an acre in check rows three feet eight inches each way and will make 3,240 hills of corn. Assuming four stalks in the hill and allowing 5 per cent loss from uncontrollable causes, a perfect stand would mean 12,312 stalks on each acre. Now if we plant corn that tests only 85 per cent which, by the way, is above the average for untested seed corn, this would mean a loss of 1,236 stalks on every acre and then too there would be a much larger per cent of weak or barren stalks that produce only small nubbins or nothing at all.

Don't you think you could afford to do a little extra work at a time of year when work is not so rushing and test your seed corn to save over 1,000 ears or ten bushels on every acre you plant? Why work just as hard to produce nine-tenths of a crop or less, as you would for a full crop.

The work of testing each year of seed corn is not such a tedious task after all. In fact after you are once started it has a real fascination. If a close observer one finds some very interesting things. It is not the best looking ear of corn that is the best in the germinating test. Perhaps you will notice a difference in the vitality of the corn picked early and that picked later, that placed near the ceiling and that nearer the floor of the drying room, or that hanging in the sunlight and that where it is not so light.

We usually start testing our seed corn and grains some time in January as we test all that we plant and sell for seed. Right here let me add a word of caution, be sure the frost is entirely out of your corn before you put any in the test as very erroneous results will be obtained if the corn is frozen.

The first requisite in seed testing is a germinating box of which there are several on the market and others described in various bulletins issued. After trying several methods we have found the one most satisfactory is a box about eighteen by thirty-six inches and four or five inches deep. In the bottom place about two inches of sand then put three or four thicknesses of burlap, over which we stretch tightly a piece of heavy muslin tacked to the sides and ends of the box. Then with an indelible pencil draw two-inch squares upon this sheet and number them. For a cover we use several thicknesses of burlap then place a piece of iron roofing cut to fit the box over all, to hold the moisture.

After the corn has been selected for testing place on a table or floor of the drying room with the tips all pointing from you and a nail driven between each ear numbering each space. By placing the ears in this manner they are in a position so the sampling may be done rapidly and systematically. Great care should be exercised when removing the kernels from the ear not to injure the germ. Now take out four kernels from each ear and place in the germinating box in the square numbered correspondingly to that of the ear. In taking out these four kernels we take one from near the butt, then by about a quarter turn of the ear take out the second just about a fourth of the way toward the tip. By repeating this when we have taken out the four kernels we have one out of each quarter of the circumference and length of the ear. After the sampling is completed and covering put over the kernels in the germinating box, it should be thoroughly dampened and the tin cover placed over all to hold the moisture. We allow six or seven days before making determinations, during which time the germinating box should be held at as even a temperature as possible anywhere between 65 and 85 degrees. It is important that the temperature does not get too low during the night. A drop much below 55 degrees will seriously affect the reliability of the test.

At the end of this time remove cover from the box being careful not to disturb the kernels in the squares. Beginning with space No. 1 in germinating box examine the kernels in each square. This part of the testing must be done with considerable care and requires good judgment as kernels will be found in all stages of development. If the four kernels in any square each show good healthy sprouts the ear which they represent should be retained for seed.

If one of the kernels fail to germinate or gives even a weak root or stem sprout, the ear from which it was taken should be discarded as unfit for seed, as should ears in which all the kernels have sprouted but show lack of vigor. The main thing to remember in checking up your test is to use only those ears for seed from which every kernel tested has given a strong, healthy sprout.

With our pure-bred seeds that have taken hard-working men years to increase the yield to their present high average let us, as members of the Wisconsin Experiment Association, show our appreciation of their labors by at least testing our seed before planting the season's crop that we may obtain as great a yield as possible, expressing in this way our gratitude to them.—|Before Annual Meeting of Wisconsin Agricultural Experiment Association.

CLOVER, ITS VALUE AS A SOIL RENOVATOR.

To the Editor of The Homestead:

The value of the clover plant as a food for live stock and its use and value as a fertilizer is generally better understood and more fully appreciated than its functions as a soil renovator. In general soil management there are numerous important functions that tillage and fertilizers are unable to perform. When we discuss the clover plant as a soil renovator we have special reference to that particular function or quality which puts the soil into a loose or friable condition and prepares it for the most perfect pulverization by the tools used in fitting and cultivating. The clover plant acts as agent and distributes certain gases which act as a leaven, making the soil more porous and allowing a free circulation of the air, heat and moisture among the roots of the plants. This free action of the air and water enables the roots to gather nitrogen from the atmosphere and deposit in the soil, thus affording fertilizing and renovating qualities for future use. These qualities may be greatly conserved and stimulated when the surface of the soil is kept covered with growing clover at all times. During the winter the tops of the clover will decay and form humus which acts as a cover crop and prevents the loss of nitrogen in the soil by evaporation and prevents the soil from washing.

The long root systems of the clover plants penetrate the depths of the subsoil while silently searching for mineral plant food which they bring up from below and deposit within easy reach of the roots of plants that follow in the rotation of crops. They leave the soil in a porous conditon and it is more easily penetrated by the roots of succeeding crops that follow in the rotation. Clover is a great weed exterminator, and when rightly managed enables us to clean up and renovate a field cheaper than by any other method. The roots reach every part of the soil and disintegrate it, and by their decay leave vegetable matter and food elements brought from the air and subsoil. The value

WHY INCUBATOR CHICKS DIE.

THE book entitled, "The History of White Diarrhoea, or Why Incubator Chicks Die," will be sent absolutely free by return mail, to anyone sending us the names of 7 to 10 of their friends that use incubators. This book can save you $100 this summer. It describes white diarrhoea or bowel trouble. The cause and tells of a cure. **Book Absolutely Free for the Names.**

RAISALL REMEDY CO., BLACKWELL, OKLAHOMA

PLYMOUTH ROCKS.

EGGS from PRIZE MATINGS

I HAVE eggs from White Plymouth Rocks scoring 93 or better, and winners of 1st, 2d, 3d and 5th, Shellenbarger judging, at one of biggest shows in this section. Birds all of best color, finely shaped, thrifty and healthy. Prices sent on request. Also fan tail pigeons for fanciers. Address
HENRY LINKE, - Wayne, Nebraska.

BUFF PLYMOUTH ROCKS

BRED from **LAYERS** and **WINNERS.** A few hens for sale at $1 each. Some scored cockerels and a few scored pullets for sale. Write and state what you are interested in buying. Address
J. O. KOERTH, - Ionia, Iowa

1898--Buff Plymouth Rock--1913

EGGS from 3 prize winning matings at $3.00 per 15, $5.00 per 30. Utility flock $1.00 per 13, $2.00 per 30, $3.00 per 50. Nothing in this flock scoring less than 90 points. Book your order early so you can get the eggs when you want them, as there is going to be a great rush this spring. Mating list free. Address **M. E. KRAFT, Brooklyn, Iowa.**

WHITE PLYMOUTH ROCK EGGS Pen No. 1 is headed by a cockerel that took first at Grinnell. Pen No. 2 is headed by a cockerel sired by a cockerel that was GRAND CHAMPION at Detroit in 1912. These are mated to yearling hens weighing 10 lbs. each. For all orders booked before March 15th I will give 25 per cent discount. Eggs $2.00 per 15. Address Chas. L. Berry, Iowa City, Ia,

Big Barred Rock Cockerels 200 GREAT large, nicely marked, heavy-boned, yellow-legged cockerels. Single birds $3 each. Three at $2.50 each. Five at $2 each. Weigh up to eight pounds each. Money back if not suited. Address
Theo. Martin - - Bellevue Iowa.

BARRED ROCKS, BRONZE TURKEYS A few good young toms at $5 each and 2 yearling toms, wt. 36 lbs. or better, $7 each. Eggs, Barred Rock, special matings, $2 per 15, 2 sittings $3.75, 3 sittings $5, farm range, 30, $1.50; 100, $4. Turkey eggs 30 cents each. M. V. LEEPER, Redfield, Iowa.

WHITE ROCK COCKERELS FOR SALE

SIRED by the grand champion at 1911 Des Moines show. $3.00 each or two for $5.00. Every bird guaranteed. Address Charles Guth, Derwick, Iowa.

IVORY WHITE ROCKS S. C. Orpingtons. R. C. Leghorns, Wyandottes. Holland turkeys, Indian Runner ducks. Embden geese. Scored cockerels, pullets, hens for sale, $4.50 to $10. Eggs in season. $1 to $10 per 15. Address Ivory White Poultry Farm, Greene, Iowa.

B. P. ROCK COCKERELS LARGE size and extra heavy bone with that deep blue barring, not brassy; sired by high-scoring ckls. weighing 10 to 12 lbs; from hens and pullets weighing 7½ to 11 lbs. Price $2 to $5 each. Eggs, 15 $1.50; 30, $2.25. M. A. Easthouse, Hartley, O'Brien Co., Ia.

White Rock Cockerels

EXCLUSIVE. Strictly high-class, 125 from 6½ to 10 pounds. Prices for quick sale. $1, $1.50 and $2. Eggs in season. A. C. BINNIE, Alta, Iowa.

Exhibition Barred Rock Ckl.

From our 1st-prize pens. Pure Bradley very closely related to Chicago and New York winners Prices $2.00 to $10.00 each. Satisfaction guaranteed.
Albert A. Foster, - - Russell, Iowa

WE HAVE a few choice White Plymouth Rock and Rose Comb Buff Leghorn cockerels for sale at $1.00 to $3.00 each. Five fine Rose Comb White Orpington females, $7.00. A few white guineas $1.50 each, $2.50 pair. Address Mrs. H. E. Clark & Sons, R. 3, Box 9, Estherville, Ia.

EGGS FROM QUALITY

BARRED ROCKS, bred for utility and exhibition. Been winners for fifteen years. $1.50 per 15, $5 per 100. Mrs. Chas. Lowry, Box P, Edgar, Neb.

10 BREEDS. Buff Rock specialist. Breeder of B. & W. P. Rocks, S. C. R. I. Reds, W. C. B. Polish, L. Brahmas, S. L. Wydts., S. & R. C. B. Minorcas, B. Lang., B. C. Bantams. J. Ross Bachman, Blakesburg, Ia.

Bradley Barred Rocks and S. C. Reds Scored, unscored. New blood for all customers. Satisfaction guaranteed. Frank Santee, What Cheer, Ia.

WHITE Rocks. Ckls., comprising winning points of show birds, from high scoring parent stock. Eggs by setting and 100 guaranteed to be high-class. Prices reasonable. Mrs. E. S. Wolcott, Richland, Ia.

BARRED P. Rock ckls. and pullets from winners at leading shows. Large birds, fine egg records, from $3 to $5. Send for matinglist of eggs for sale from prize-winning pens, **J. F. Davidson, Lamont, Ia.**

Barred Rock Cockerels Big bone, nicely marked, $3.00 each, two for $5 if taken this month. As usual, satisfaction guaranteed. Hawkeye Poultry Yds., Mt. Pleasant, Ia.

EGGS—Barred P. Rocks, from 10-pound female, 12-pound males. State show first-prize winners. Free catalog showing real photos of prize winners. **A. D. MURPHY & SON, ESSEX, IOWA.**

WHITE P. ROCK EGGS Carefully selected stock; hatches guaranteed; $1.50 for 15, $2.50 for 30 and $3 for 45. Address Earl Roberts, Ulysses, Neb.

FOR SALE. BUFF Rock Cockerels at $1.00 while they last.
L. A. MURROW, MITCHELLVILLE, IA.

EGGS from large White Rocks at 5 cents per egg. Address
Mrs. H. Wood, Moville, Ia.

FOR SALE BRADLEY BROS.' Barred Rock cockerels direct
Eggs for hatching. J. H. Montgomery, Fairfield, Ia.

BARRED R. ckls. $3 up. Guarantee price right, quality considered. Feathers from any section sent on request. Chas. McCaskey, R. 2, Ogden, Ia.

FOR SALE Choice lot W. Rock ckls., W. Holland turkeys, Mammoth Pekin ducks. Prices reasonable. Mrs. M. W. Coan, Little Cedar, Iowa.

WANTED to buy, Barred Rocks, Houdans, and many other varieties. Toulouse geese, Pekin and I. R. ducks. Matthew Mertz, Des Moines, Iowa.

PLYMOUTH ROCKS.

B. P. R. COCKERELS A few left, scored and unscored, at $1.00 to $1.25 each. Address Mrs. S. W. Miller, Truro, Iowa.

PARTI ROCK EGGS $3 for 15. Stock bred from Madison Square winners. Address Rahn & Son, Box 144, Clarinda, Iowa.

B. P. R. eggs for hatching, from large well-barred birds. Good laying strain. 15 for $1.00, 45 for $2.25, 105 for $5.00. Mrs. J. H. Heilman, Holstein, Ia.

HIGH-CLASS Barred and White Rock ckls. $1.50 to $3, pul. $1. Breeder of heavy-boned Poland Chinas. Jas. H. Duncan, Lone Oak Farm, Lineville, Ia.

CKL. bred Barred P. R. ckls., fine large birds, narrow barring to skin. Ringlet and Bradley strain, satisfaction guar'd. Mrs. Wm. Stoll, R. 10, LeMars, Ia.

BARRED Rocks, S. C. R. I. Reds. Scored ckls., both varieties, evenly marked, extra heavy weight. Priced according to score. H. B. Simpson, Albany, Ill.

BUFF Rocks. Cockerels, hens, pullets, eggs, bred successfully 15 years. The very best Lowest cost. Address J. H. Kelley, Altoona, Iowa.

THOMPSON Imperial Ringlet and Bradley Bros. pullets $2, ckls. $2 to $3. Stock direct Eggs in season. Wm. Kerr, Box B, Winthrop, Iowa

EGGS from pure-bred white Plymouth Rocks; Fishel strain; farm raised; 15, $1; 50, $2.50; 100, $4. Address Mrs. E. E. Johnson, R. 2, Milo, Iowa.

PURE-BRED Barred Plymouth Rock Eggs, $1.25 for 15. Write for larger amts. Large and well-marked birds in season. Wess Whetstine, Wellman, Ia.

FARM RAISED scored or unscored Barred P. R. cockerels for sale at reasonable prices. Mrs. Madison Spencer, Audubon, Iowa.

Eggs—Barred Rocks Free catalog, magnificent birds, low prices. Hurry.
HAZEL-DELL YARDS, - ESSEX, IOWA.

WYANDOTTES.

White Wyandotte Eggs $1.00 for 15, $4.00 for 100; from state show winners. Address
ETHEL H. SHAW, R. 6, Newton, Iowa.

of clover as a soil renovator depends upon the skill that is exercised in the management and the all-important question for us to consider is, "What can be done to insure the greatest benefit from the clover crop?" First we must get a good stand and then we should plan to have it shade the ground as much as possible. This may be accomplished by cutting the stubble high and allowing the plants to make a vigorous fall growth for protection during the winter. When there is a growth of weeds in the newly seeded stubble it may be cut, leaving a high stubble and taking the track clearer off and allowing the cut plants and weeds to remain on for a winter mulch. It is folly for any farmer to think that he can get the full amount of benefits from manure or commercial fertilizers unless he improves the physical condition of his soil with an occasional growth of clover to lighten the soil and improve its texture. We may study the state bulletins, the works of the best writers and the agricultural press and draw but one conclusion—that the farmer can find no plant that will do more toward putting his soil in good condition and improve its texture than clover.

advertisement that appears elsewhere in this department.

—L. M. Murrow, Mitchellville, Iowa, quotes a low price on Buff Rock cockerels in his advertisement appearing in this department.

—The Glynn Poultry Yards, Cascade, Iowa, can supply readers of The Homestead with Single Comb Buff Orpington stock and eggs at right prices.

—N. W. Scales, Iowa City, Iowa, can furnish eggs from snow white utility White Wyandottes at prices named in his advertisement appearing elsewhere in this department.

—M. H. Mammn, Hinton, Iowa, is quoting prices on White Orpington eggs under the proper heading in this department. He is also quoting prices on Indian Runner duck eggs in an advertisement elsewhere in this department.

—Tom Sellers, Vinton, Iowa, has two pens of White Orpingtons from which he can supply Homestead readers with eggs for hatching. His advertisement quoting prices and giving other information appears elsewhere in this department.

—Barred Plymouth Rock eggs from females weighing ten pounds and males weighing twelve pounds are offered for sale by A. D. Murphy, Essex, Iowa, in his advertisement that appears elsewhere in this department. They issue a catalog which will be sent free and have some state show first-prize winners in their flock.

—"My White Plymouth Rocks are better than ever before and the flocks contain 150 choice hens in fine condition," writes Mrs. H. Wood, Moville, Ia., in sending copy for advertisement found elsewhere in this issue. She adds, "I am well equipped to handle all egg orders and, whether large or small, each shall receive the same careful attention."

—White Plymouth Rock eggs from two different pens, each headed by a prize-winning cockerel and mated to hens weighing ten pounds each, are offered for sale by Charles L. Berry, Iowa City, Iowa, in his advertisement appearing elsewhere in this department. Mr. Berry will give a very liberal discount on all orders for eggs booked before March 15th.

—Mrs. B. C. Marts, Hampton, Iowa, has an advertisement offering Single Comb White Leghorn eggs for sale elsewhere in this department. In furnishing copy she writes: "Our stock are farm range, good and healthy and nothing but good fresh eggs will be shipped. They will be packed carefully. Parties wanting large orders should write for prices."

—J. B. Heisel, Grinnell, Iowa, is offering eggs for sale from his flock of Rhode Island Reds in his advertisement found elsewhere in this department. He breeds Rose Comb Rhode Island Reds exclusively and has a number of prize winners in his pens. Orders will be filled promptly and carefully and in the order in which they are received.

—We wish to call the attention of Homestead readers to the advertisement elsewhere in this department of Mrs. H. E. Clark & Sons, Estherville, Iowa. They are advertising for sale some choice White Plymouth Rocks and Rose Comb Buff Leghorn cockerels, also a limited number of Rose Comb White Orpington females and a few pairs of White guineas.

—W. W. Vaughn, Marion, Iowa, who has bred Buff Cochins for twenty-five years, reports good sales thus far this season. He still has a fine lot of big-boned, large-framed, well-feathered, good-colored cockerels, weighing eight to twelve pounds, which he is offering at $2 to $5 each. He can also spare a few hens and pullets. See advertisement elsewhere in this department.

—Mrs. Wilson McIntyre, Red Oak, Ia., writes: "I cannot fill any more orders for unscored Single Comb White Leghorn cockerels. Have a few cockerels scoring 92¼ to 93¼ points from $2.50 to $3.75 each. Have a few hens and pullets at $1 each. I am booking orders for eggs and baby chicks. Eggs from exhibition females mated to cockerel direct from D. W. Young at $3 per fifteen, or $5 per thirty."

—In furnishing copy for her new advertisement found elsewhere in this department, Miss Maggie Henning, Ira, Iowa, writes: "My Rose Comb Rhode Island Reds are in good healthy condition, fine looking, large vigorous birds. They will weigh from seven to eight pounds and were raised on a large farm. They score from 91¼ to 93¼. My prices are greatly reduced, as I must make room for my breeding pens."

—Mrs. H. A. Wohlsdorf, Lawler, Ia., in furnishing copy for advertisement found elsewhere in this department, writes: "I am sold out of White Holland turkey hens, but have some good toms left. They are big, heavy-boned birds and of the best of breeding. Have sold all my Single Comb Black Minorcas and could have sold more if I had had them. The Pekin drakes I am advertising for sale are choice birds, nice, large and heavy boned, with snow white plumage."

—H. Nobiling, Perry, Iowa, in sending copy for advertisement offering Partridge Wyandotte eggs for sale, found elsewhere in this department, writes: "I have sold all of my cockerels. Have two pens mated for this season. They are hard to beat and are headed by prize-winning cockerels. The cockerel at the head of pen No. 1 took first at Lansing and Grand Rapids, Mich.; the cockerel at the head of pen No. 2 won first at Gowrie and second at Boone, Iowa."

Ask your neighbor to subscribe for The Homestead.

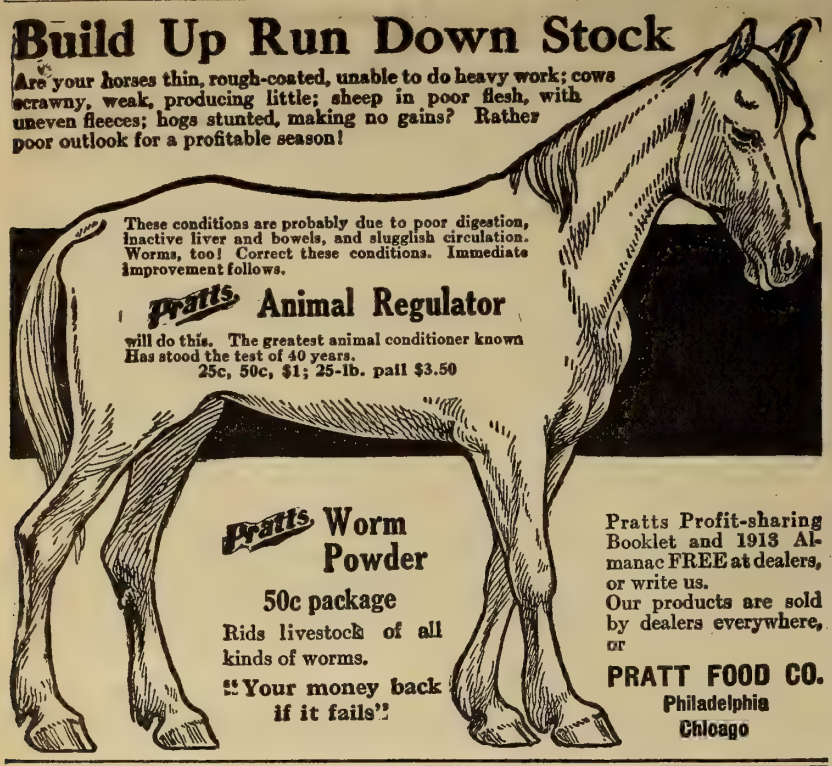
Build Up Run Down Stock

Are your horses thin, rough-coated, unable to do heavy work; cows scrawny, weak, producing little; sheep in poor flesh, with uneven fleeces; hogs stunted, making no gains? Rather poor outlook for a profitable season!



These conditions are probably due to poor digestion, inactive liver and bowels, and sluggish circulation. Worms, too! Correct these conditions. Immediate improvement follows.

Pratts Animal Regulator

will do this. The greatest animal conditioner known Has stood the test of 40 years.

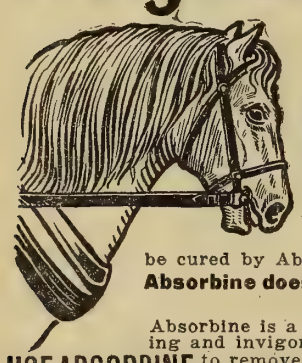
A Vigorous Farm Horse



The Result of

ABSORBINE

TRADE MARK REG. U.S. PAT. OFFICE

All ills in man or beast usually have a small beginning. The breakdown of a horse starts, as a rule, with a shoe boil or a wire cut, or bruises, collar sores, swollen glands, strained ligaments or something else of this kind—all of which can be cured by Absorbine.

Absorbine does not blister or remove the hair and horse can be worked.

Absorbine is a mild, pleasant liniment to use—is healing, soothing and invigorating and a positive **Antiseptic and Germicide.**

USE ABSORBINE to remove **Bursal Enlargements, Bog Spavins, Thoroughpins, Puffs, Shoe Boils, Capped Hocks, Swollen, Painful Swellings;** to cure any strain or lameness; to repair strained, ruptured tendons, ligaments or muscles; to strengthen any part that needs it. You can buy Absorbine at regular dealers, price $2.00 per bottle or sent to you, express prepaid with full instructions. Write me about any case on which you would like advice. Horse book 1A free. Manufactured only by

W. F. YOUNG, P. D. F., 391 TEMPLE STREET, SPRINGFIELD, MASS.

Great Horse Story

"Kate and Queen"

By Prof. Jesse Beery **Free**

A most wonderful and unheard of book offer. It equals the famous "Black Beauty" in human interest—surpasses it in practicability. "Kate" a victim of poor handling is vividly contrasted with "Queen" who was more fortunate. You sympathize with one—rejoice with the other—even as you sigh for the slum waif and laugh with the child of fortune.

Prof. Beery has skillfully woven into this intensely interesting and true story, many valuable suggestions for handling horses—a result of a lifetime's experience.

SPECIAL FREE OFFER

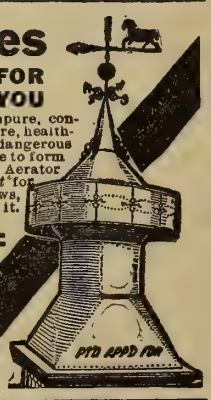
Prof. Beery desires that every horse owner, trainer, breeder—everyone interested in horses—should read this great story. To make it possible, for a short time he offers every interested horseman a copy **FREE.** He only asks that ten cents be sent to cover postage, and the names and addresses of five other horse owners. Send U. S. Stamps or coin. If you have even a passing interest in horses—if you own, train or breed them, you will gather from this book a fund of knowledge worth many dollars to you. Send for copy.

FREE With each book we also send free a beautiful colored picture of Queen--oil painting effect--suitable for framing.

PROF. JESSE BEERY, Box 684 Pleasant Hill, O.

Put a KING AERATOR on Your Barn

Pure Air Makes Big Money FOR YOU



The King Aerator draws out the foul, impure, contaminated, moisture-laden air. Fresh, pure, health-giving air takes its place. There's no dangerous draft, no cold air in winter, no moisture to form on the ceiling and walls. The King Aerator saves you big money. Means *more fat* for steers, hogs, sheep, more milk from cows, more muscle on horses. Let us prove it. Send name on postal now for our

FINE BOOK FREE

Read how the King Aerator is made, what it's made of and how it works. Learn why it can't be imitated, why it can't blow down or wear out. See actual photo-illustrations of barn equipped with King Aerators, read letters from owners. Don't miss this book. It puts real money in your pocket. Mail postal NOW. Address

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office

SYMPTOMS AND TREATMENT.

PINING COW—WOODEN TONGUE.

(1) Have a red cow six years old due to come fresh in May and now giving some milk. About two months ago she refused to eat and has since become very thin. At first she passed bloody urine frequently, but now seems normal in that respect. Her bowels have not been as loose as they should be. She eats hay, fodder or ear corn, but won't eat bran or shelled corn. Seems rather stiff, will stand outside all the time and has to be driven into the barn, regardless of weather. I gave her linseed oil mixed with bran and shelled corn, which she ate for a few days and seemed better, but won't eat it now. (2) Have another cow six years old that started to slobber about a month ago, and about a week ago her tongue began to swell up. The trouble seems to be on the under side at the root. She starts to eat all right and then her tongue swells and she does not seem to be able to swallow. After eating she gets better and chews her cud all right. I washed the sore spots with a strong alum solution.—R. K. W.

(1) We would not feel justified in prescribing treatment for this cow as the symptoms strongly suggest the presence of tuberculosis. Have her tested with tuberculin. (2) This trouble is called "wooden tongue" and is due to an invasion of the parts by the ray fungus (actinomyces). It is curable. Paint the denuded spots on the tongue once daily with tincture of iodine. Dissolve one dram of iodide of potash in the drinking water night and morning for ten days; then skip ten days and repeat. Several ten-day periods of treatment may prove necessary to effect the cure.

INDIGESTION.

I moved from Iowa to Nebraska last spring and all horses have been poor all summer, though they look better now. However, one, fifteen years old, is in bad condition. His hair is long and standing the wrong way. He is a fast eater and has a ravenous appetite, but quite a good deal of the corn passes through whole. He is blind and his teeth seem to be in good order. I feed him corn, oats straw and millet hay once a day.

Have the teeth attended to by a veterinarian. Clip the hair from the belly to a line with the straps of breeching and breast collar and from legs above knees and hocks. Feed from a very large shallow feed box so that he will not bolt feed. Change rations to whole oats, wheat bran, ear corn and mixed clover hay. For the present at least do not feed millet hay. As worms probably are present give the worm powders so often prescribed here.

DISEASED COWS.

Five cows had calves last summer and fall, but some of them died the first day and some lived longer, but they were weak and did not have much life. The cows are young, look good and give milk. They were on pasture last summer and are in the stalks now. It is impossible to get them with calf again.

Have the cows tested with tuberculin as tuberculosis may be the cause of the trouble. If not tuberculosis they are doubtless afflicted with contagious abortion and if so they should go to the butcher for immediate slaughter. It will not pay you to treat them unless they are valuable registered animals. No specific cure has been found for contagious abortion.

WOUND.

Last fall my three-year-old mare got cut in the wire and though I have had two veterinarians treat the wound it does not heal up as it should and the leg is very badly swollen.

You do not describe the wound or say where it is located so we cannot give confident advice. Give the mare plenty of exercise every day and bandage the leg when she comes into the stable. Let her occupy a box stall. Wet the wound often with a mixture of one ounce of sugar of lead and six drams of sulphate of zinc in a pint of water. Label the bottle "poison" and shake it well before use.

BLINDNESS.

I have a young horse that was castrated last spring and nearly bled to death. He has been blind since, but sometimes I think he can see a very little. His eyeball looks all right, except the pupil.

We fear that the blindness mentioned is incurable; but you might try the effects of a blister applied to the poll of the head. Cerate of cantharides will serve the purpose. Also give once daily in the drinking water for five consecutive days a week, one dram of iodide of potash, to be continued for two weeks. Feed the horse well on oats and bran.

GARGET.

Sometimes the udder of one of my cows swells up and when in that condition she gives lumpy milk having the appearance of being clabber. I would like some advice as to how to cure this trouble.

At times of attack give a pound dose of epsom salts dissolved in three pints of warm water well sweetened with molasses, and follow with a tablespoonful of saltpeter in drinking water each night until trouble subsides. Foment the udder with hot water three times a day, stripping away the milk at same time, and at night rubbing in warm melted lard.

LAMENESS.

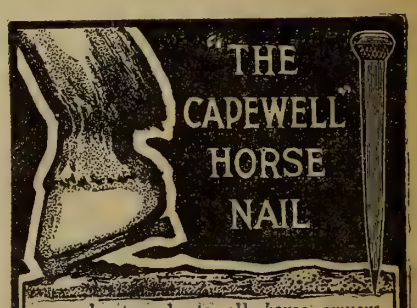
I have a black mare that often gets lame in her right front leg, but I can't see anything wrong with it; no swelling any place except that it seems a little puffy just above the fetlock. If she is lame at night when I take her into the barn she is all right in the morning for awhile, sometimes for half a day, and sometimes she will limp in a couple of hours.

Each time she comes into the stable hand rub the leg dry, then wrap with cotton batting and bandage snugly. If this does not suffice, after a thorough trial, clip off the hair and blister the back tendons with cerate of cantharides.

WOODEN TONGUE.

Please tell me what causes wooden tongue in cattle and what will cure it.

See answer on this subject to R. K. W. in this issue.



appeals strongly to all *horse owners* who take pains to look into the shoeing problem

"Capewell" nails hold the best. No breaking at head or clinch.

They are safe too. Do not split or clinch when shoes drive them, with a chance of crippling the horse.

Remember the brand—"*Capewell*" The trade-mark—*a check mark on the head*

Quality considered, the cheapest nail in the world. Sold at a fair price so that any shoer can afford to use it.

Save the Horse's Neck and Shoulders

No horse will pull near as hard if his shoulders and neck are sore from a poor fitting collar. He'd rather take a "licking" than throw his weight against those sores and galls.

Give him ideal working conditions—a good fitting collar and Ventiplex Collar Pads. See what a difference they make.

Ventiplex Pads

keep the neck and shoulders in good healthy condition. Prevent sores, galls or rubbing. The porous Ventiplex fabric absorbs all sweat and moisture The air freely circulates through the fabric keeping the neck and shoulders dry and clean. When the pads get soiled, you can wash them as you would clothes They hold their shape.

Your dealer should have them If he hasn t write us.

Makes the Plow Users Hardest Task Easy

One Nut to Remove— The Job is Done

John Deere "D" Shares Save You Time and Trouble

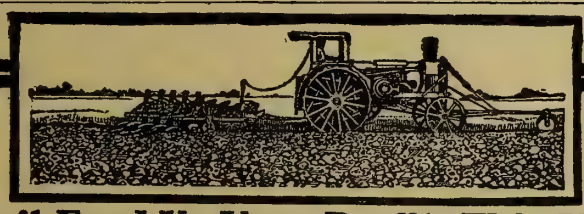
1st.—Save 80 per cent of time in changing shares.
2nd—No tipping of plow or lying in the dirt.
3rd—The simplest and strongest share ever made.
4th—No lost, bent, or broken bolts or nuts.
5th—Only one nut to remove instead of five.
6th—Locks rigidly—Equalized strain on all parts.

"D" means quick detachable—quick attachable, too. On and off quick is the idea. This new and exclusive feature is the latest development in the art of plow making. As soon as you see it you will want a plow equipped with it. Only new Deere sulky and gang plows have it. Don't waste your time and patience changing old style shares.

Every up-to-date farmer will be interested. We have a new free book. Write for "Q-D" Book No. Q-D 27

JOHN DEERE PLOW COMPANY, MOLINE, ILLINOIS

JOHN DEERE MOLINE, ILL. THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS



Don't Feed Up Your Profits This Year Into Horses Or Mules

Now is the time to settle the question of whether you are going to feed up about one-fourth of your this year's crop into horses or mules. Statistics show that it takes that much to keep them. They eat every day but they average only about 100 full days' work—the other 265 days you have to feed them all for nothing.

That's why so many men are changing to Tractor Farming. A Tractor eats nothing when not working. And even when working it costs less than to feed horses. Records kept by men who have replaced their horses with Avery Tractors and Plows show a saving of over half the expense of horse plowing and a big saving in expense on other farm work. Also easier on the men and bigger crops by doing the work quick at the right time.

Avery Tractors and Plows make Power Farming a success on any size farm. 3 sizes—12-25 H. P., pulling 3 to 4 plows and turning 10 to 12 acres per day, for small farms—20-35 H. P., pulling 5 to 6 plows and turning 15 to 18 acres per day, for medium sized farms—40-80 H. P., pulling 8 to 10 plows and turning 25 to 30 acres per day, for large farms.

Because they are "Light-Weight" (12-25 H. P. less than 7,500 pounds, 20-35 H. P. less than 11,500 pounds and 40-80 H.P. only 20,000 pounds) they don't pack the ground or waste fuel like heavy-weight Tractors. This is a big point to note. Also the Simplest Tractors built. Burn gasoline or kerosene.

There's no other plow like an Avery "Self Lift." With it, one man or boy can handle the entire outfit alone. Plows handled entirely by power taken from the plow wheels.

AVERY. "Light-Weight" Tractor and "Self-Lift" Plow

SOLD ON APPROVAL—AT LOW PRICES AND FULLY GUARANTEED

When you can buy on such terms and at the Low Avery Prices—only $1200.00 for 12-25 H. P. Tractor, $2000.00 for 20-35 H. P. and $2650.00 for 40-80 H. P.—you surely must investigate power farming this year. Write for new 1913 Complete Book of Avery Tractors and Plows with Free Power Farming Facts and full information about the Avery Mutual Benefit Selling Plan.

NEWS OF THE SALE RING.

Slepicka's Short-horn Sale.

One of the snappiest and nicest sales of Short-horns that the writer has attended for some time was held by Chas. A. Slepicka, Tobias, Neb., on February 14th. The offering was a nice one, mostly quite young, excepting three cows with quite a little age, and they were eagerly picked up at an average price of $100. About five years ago Mr. Slepicka started with three or four heifers and the cattle sold in this sale were all descendants of these same cows and three of them went in the sale. We cite this fact merely to show that it is possible for a farmer who is only of moderate means to build up a herd of choice cattle and realize a good profit on them if only given reasonable attention. Another feature of this sale was the fact that practically all the cows were taken out of the pastures and stalk fields only the day before the sale. The value of a good bull in the herd was clearly demonstrated by the demand that was manifest for cows bred to Mr. Slepicka's great young bull, Diamond Digger, a son of the champion, Diamond Goods, and out of a Queen of Beauty cow. Col. W. J. Thompson did the selling and certainly set a high mark for himself by the manner in which he conducted the sale. Those selling for $100 or more are listed:

COWS.

Atlanta, calved April, 1908, and c. c.; W. J. Kottas, Tobias, Neb.	$120.00
Melinda, calved April, 1908; L. L. Miles, Grafton, Neb.	110.00
Lady Countess, calved March, 1909; C. Smraha, Milligan, Neb.	112.50
Violet, calved February, 1911; J. A. Schinzel, Grafton, Neb.	134.00
Rosie, calved April, 1907; J. A. Schinzel	111.00
Rosie 2d, calved April, 1910; Alex. Fergersen	100.00
Viola 2d, calved February, 1911; Blank & Hackleman, Macon, Neb.	102.50

BULLS.

Hero, calved March, 1911; Alex. Fergerson	125.00
Glendale, calved January, 1912; B. A. Ksamit, Hallam, Neb.	130.00
Violet's Count, calved December, 1911; C. W. Sarnes, Western, Neb.	105.00

The Mouw Poland China Sale.

The annual sale of bred sows, held by Peter Mouw, Orange City, Iowa, on February 19th, was one of the most successful of the winter sales in the northwestern part of the state. The average of $137 was secured on an offering of fifty head and from a crowd among which were some of the most prominent breeders of the Poland China hog in the country, a gathering which appreciated the class of the sale stuff to the utmost. Breeders were present from Missouri, Indiana, Illinois, Minnesota, South Dakota and Nebraska and were buyers of the best in the offering. Mr. Mouw had a great lot of sows, mostly matured, and the entire consignment showed all the size that this breeder has made so prominent in his work. The sale was topped by Herring Bros., Columbus, Neb., on No. 48 at $345. No. 1 was next in price, going to J. G. Gallman at $320. For the number of animals listed and sold this sale will probably set a mark in the breeding record made by Peter Mouw that will stand for some time, and it is about as good an average as has been made by any breeder who is not riding his hogs on a boom. Although the world-famous Big Jumbo is dead there are several young boars in the herd at this time that give promise of developing the same great size and other good qualities that this boar possessed, and sows bred to them were much in demand, especially those by Big Jumbo. The sale was conducted by Col. J. A. Benson, assisted by Cols. Ira Cottingham, W. H. Cooper and E. H. Jackson. The following is a list of the sales:

1.	J. G. Gallman, Van Horne, Iowa.	$320
2.	J. G. Gallman	210
3.	W. J. Graham, Howard Lake, Minn.	165
4.	S. A. Nelson, Malcolm, Neb.	125

Make Your Lame Horse Sound, Like This

You Can Do It While He Works.

We want to show you that there isn't any affection that causes lameness in horses that can't be cured, no matter of how long standing. We want to send you our instructive book, "Horse Sense" No. 8.

It describes all. And with the book we want to send you an expert's diagnosis of your horse's lameness. All this is absolutely free. Simply mark the spot where swelling or lameness occurs on picture of horse, clip out and send to us telling how it affects the gait, how long animal has been lame and its age.

We absolutely guarantee Mack's $1,000 Spavin Remedy to cure Spavin, Bone or Bog Spavin, Curb, Splint, Ringbone, Thoroughpin, Sprung Knee, Shoe Boil, Wind Puff, Weak, Sprained and Ruptured Tendons, Sweeny, Shoulder or Hip Lameness and every form of lameness affecting the horse. We have deposited One Thousand Dollars in the bank to back up our guarantee. Cures while he works. No scars, no blemish, no loss of hair.

Your druggist will furnish you with Mack's $1,000 Spavin Remedy. If he hasn't it in stock, write us.

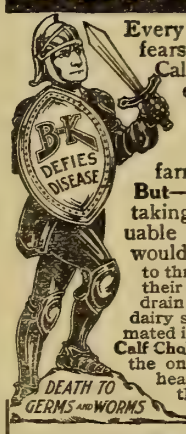
McKallor Drug Co., Binghamton, N. Y.

Dobry's Hog Remedies

POSITIVELY cure sick hogs and prevent well hogs from getting sick. Cure your hogs now or make your well hogs sick proof. Will ship remedies without money. If they fail no money will be asked. Write today. Give number, sizes and true condition of all hogs in herd. Address

John Dobry Mfg. Co., Cedar Rapids, Iowa.

Calf Cholera



Every dairyman knows and fears the deadly results of Calf Cholera. The loss every year in the Central States alone amounts to more than the total taxes paid by farmers in those states. But—the greatest loss is the taking away of so many valuable young animals that would otherwise develop into thrifty profit producers for their owners. This enormous drain on the farmers of the dairy states can hardly be estimated in dollars and cents.

Calf Cholera is a germ disease and the only way to avoid these heavy losses and wipe out the disease is to destroy the germ.

10 times as Powerful a Germ Destroyer as Carbolic Acid, but Non-Poisonous.

B-K Bacili-Kil

Destroys Germs. Disinfects Stables, Animals, etc. Prevents Disease.

By actual laboratory tests it has been proved that one drop of B-K in five tablespoonfuls of water destroys the Calf Cholera germ instantly and yet it is absolutely non-poisonous to either human or animal life, making it possible to give to calves in their milk.

By this simple, easy means B-K is taken into the digestive tract where it acts directly upon the disease-breeding germs. Even in advanced cases relief is prompt, and as a means of prevention the B-K treatment is safe, sure, convenient and inexpensive.

Trial Bottle FREE

To prove the wonderful value of B-K about the farm and dairy in treating Calf Cholera, Tuberculosis and all other forms of germ diseases, we will for a limited time send a full trial bottle free to any farmer or dairyman who fills out the coupon below. You can't afford to pass this liberal offer. You can't afford to be without this positive protection from the scourges and diseases which are causing the loss of millions of dollars to farmers every year, especially when you can get it to try and prove, absolutely free. Fill out and mail coupon now—lest you forget.

Koenig's Duroc Jersey Sale.

A very successful sale of Duroc Jerseys was held by H. H. and C. H. Koenig at the farm of the former at DeWitt, Neb., on February 13th. The offering was very choice in most cases, and while a nice average was secured, yet more money was due on the better ones. The top of the sale was only $58 and at the price Lot 3 went to the good young breeder, A. J. Duerr, Milford, Neb. Wm. Retzlaff, Bennet, Neb., secured an extra choice sow in Lot 1 for $50. This sow was easily the $100 kind. The entire offering averaged $38.50. Those selling for $35 or more are listed. The sale was conducted by Col. W. J. Thompson:

1. Wm. Retzlaff, Bennet, Neb_____$50
2. C. W. Buck, DeWitt, Neb_____ 47
3. A. J. Duerr, Milford, Neb_____ 58

Bloemendaal's Poland China Sale.

The sale of Poland China bred sows held by Korver Bros. and G. J. Bloemendaal, Alton, Iowa, on February 18th, was a decided success. The forty-four head sold for an average of $85.57 in a quick sale, and were sent to many sections of the corn belt. The sows that were by the great boar, Big Black Jumbo, or bred to him, were in the strongest demand, for this boar has demonstrated that he is one of the best breeding sires in this section of the state. He puts on good bone and gives stretch to his progeny that is taking them to some of the best breeders in the country. The top of the sale was $150, paid on two sows, one from the Korver offering and the other from the Bloemendaal herd. Harry Uitenbogarrd, Archer, Iowa, who has been buying some of the choicest sows in the sales of the northwestern part of the state, bought the sow, Mollie C., from the Bloemendaal herd at this figure, and the top of the other offering was No. 33, which went to Fred Miller, Rock Valley, Iowa. Nebraska buyers were prominent in the bidding and practically all of the offering went to good breeders. The sale was in charge of Col. H. S. Duncan who, at the opening of the sale, in respect to the memory of Col. Geo. P. Bellows, whose death was announced just previous to the sale, requested that the gathering uncover in memory of that great figure in the live stock industry. Following is a list of the sales:

1. Harry Uitenbogaard, Archer, Iowa _____$150.00

Tutt's Chester White Sale.

The Chester White sale held by Geo. H. Tutt at his farm near Marathon, Ia., on Wednesday, February 19th, was quite successful from every standpoint. The average of $42.14 on thirty-five head was considerably more than the average that the same breeder secured a year ago, and the sows that he sold were sent out to some of the best breeders in this state. Mr. Tutt is a progressive breeder and has been sending out stock that has made good in the hands of other breeders. The sale was in charge of Col. W. R. Ritchie. Below we list the sales at $40 and over. All were Iowa buyers: Nos. 2, 23, 33 and 39, George Hinn, Laurens, $47.50, $64 and $44; Nos. 3 and 22, Freeman Gorman, Armstrong, $40 and $41; No. 4, Nels Whitman, Laurens, $45; Nos. 5, 13 and 16, Jay Tutt, Marathon, $46, $46 and $40; No. 6, A. B. Heath, Newell, $50; No. 7, Ed Tibbitt, Peterson, $50; No. 8, H. C. Foster, Storm Lake, $44; No. 10, C. L. McLaughlin, Marathon, $40; No. 11, John Holst, Jr., Denison, $67; No. 14, W. L. Foster, Storm Lake, $47.50; Nos. 15 and 20, Adolph Bahde, Sutherland, $40. No. 18, J. L. Barber, Harlan, $42; No. 25, F. W. La Doux, Spirit Lake, $40; No. 24, Herman Becker, Laurens, $40; No. 36, Alden Anderson, Ellsworth, $59. No. 37, Otis Edwards, Havelock, $53; No. 38, Oscar Swanson, Kleinme, Iowa, $43.

Peery's Duroc Jersey Sale.

While J. M. Peery, Alvord, Iowa, did not top the list of sales held this year in northwestern Iowa, he did land among the topmost when he sold his Durocs at his farm on St. Valentine's day. His average was $67 on the forty-one head driven out, topped at $132.50 by E. E. Farver, Ocheyedan, Iowa, on the big brood sow, Mollie Price 9th. Considerable of the offering was taken by breeders from a distance, while farm support from near at home bolstered up the sale when the breeders were not active. Mr. Peery has a very good class of hogs and his younger herd boar, Jessie's Chief, looks like a record maker in this herd for another year. Col. J. A. Benson, assisted by H. C. Carpenter and H. O. Tellier, were in charge of the sale. The following is a list of buyers and prices:

1. C. F. Barrett, Doon, Iowa____$105.00
2. Chas. Wenzel, Alvord, Iowa__ 65.00
3. Jos. Jones, Doon, Iowa_____ 82.00

The A. R. Barnes Duroc Sale.

The A. R. Barnes Duroc Jersey sale was held on Thursday, February 13th. Mr. Barnes sold a draft of forty-seven sows from his herd. The day was ideal and one of the largest crowds of the season faced Colonel Callahan when he opened the sale. The offering was in keeping with the splendid reputation of this herd. An especial feature at this sale was the liberal buying of the farmer neighbors of Mr. Barnes. No less than twenty-five of the forty-seven head were bought by the farmers of this neighborhood. The offering sold for $3,529, an average of $75.08. Below we give a list of the sales:

1. A. W. Lamb, Albion, Neb____$135.00
2. F. B. Nelson, Lindsay, Neb__ 140.00
3. Jno. Bader, Scribner, Neb___ 130.00

Theobold's Duroc Sale.

J. C. Theobold, Ohiowa, Neb., held a very nice sale of Durocs at his farm on February 12th. The offering was one of exceptional merit, of excellent blood lines and sold at such prices that they are sure to make their buyers money. We believe the greatest values for the money spent were secured in this sale, of all the Duroc sales we have attended. The average of $37 represents a profit to Mr. Theobold and he was well pleased with the results. A good attendance of breeders was on hand and bought most of the offering. Col. W. J. Thompson did the selling in a very efficient manner. Those selling for $35 or more are listed:

1. D. S. Cochran, Lincoln, Neb____$45
2. R. A. Wilson, Strang, Neb_____ 56
3. G. G. Ricker, Guide Rock, Neb__ 42
4. R. W. Mastin, Tobias, Neb_____ 50
5. F. E. Waterman, Ohiowa, Neb___ 41
6. J. G. Snodgrass, Ohiowa, Neb___ 38

27. Fred Elliot, Ohiowa, Neb_____ 45
41. Herman Wranke, Ohiowa, Neb___ 36

Van Patten & Sons' Duroc Sale.

One of the choicest offerings of Durocs that has gone out from the Van Patten herd in recent years was sent forth on February 19th, and they met with only fair demand. There were plenty of breeders and farmers at the ringside and the bidding was snappy up to a certain point, but it was out of the question to realize full value for these hogs. Local conditions and, in fact, the conditions all over the south Platte country of Nebraska are not such as to tend to make strong buyers. Few farmers have enough corn for their horses and, while there is a big crop in the northeastern part of the state and in Iowa, yet it makes rather expensive feed by the time it gets to the farms of the south Platte country. The disease situation is and has been a big factor in keeping prices down in this part of the country, as there is scarcely a section anywhere but that has been visited recently. However, these gentlemen send forth a lot of good hogs, and while they were not bought high they were really appreciated by those present. This is one of the oldest and best firms of Duroc breeders in Nebraska. A. J. Duerr, Milford, Neb., topped the sale on the exceptionally choice young sow, Lot 26 of the catalog. Colonels Callahan and Kraschel did the selling. The forty head averaged $48. Those seiling for $40 or more are listed:

1. J. O. Bayne, Aurora, Neb_____$ 87.50
2. Henry Brehm, Sutton, Neb___ 55.00
3. R. Widle & Son, Genoa, Neb__ 50.00
4. H. H. Koenig, DeWitt, Neb__ 52.50
7. Grant Stickney, Loup City, Neb. _____ 47.50

Power FREE!

I'll Give You the Use of a Genuine Galloway Gasoline Engine on Your Own Farm for Three Months ABSOLUTELY FREE! Read My Great Offer NOW!

1¼ H. P. to 15 H. P. $29.75 Up

Listen! Read this carefully! There isn't one farmer in the country—no, not a single one—who can afford to miss this offer. I positively know this to be the most liberal engine offer that has ever been made. I'll let you take a genuine Galloway Engine—let you pick any size or style you want from 1¼ H. P. to 15 H. P.—let you take it right to your own farm for 30, 60 or 90 days' trial **absolutely free.** Yes, I mean it, **absolutely free;** you don't take a **cent's** worth of risk. Don't take anybody's word about a gasoline engine—find out the truth for yourself. Get my engine and put it right to work. Use it just as though it were your own. Test it any way you want to. **Make it prove its SUPERIORITY to engines costing two or three times as much!** Take your time. I won't hurry you—don't you let anybody else hurry you. If you aren't ready at the end of a month, tell me and I'll let you keep it two or three months longer—all free. Then you'll know! Then you'll either tell me, "Galloway, I know I can't beat your engine at any price"—or you'll send it right back to me and I'll pay the freight both ways, so that you won't be a cent out of pocket!

The Only Way Is the Galloway

Selling Direct from Factory to Farm

I'm going to turn the engine world upside down with this offer. It's a wonderful offer— the most liberal engine offer anybody ever thought of. But that's the way I do business. I won't take a man's money until he is thoroughly, absolutely and permanently satisfied. That's why 125,000 farmers say: "The only way is the Galloway."

Here Is the Strongest Proof of All

E. L. Davis, South Gibson, Pa. I wish to say that the 5 H. P. gasoline engine I bought of you has given perfect satisfaction. I have used it on a three-horse threshing cleaner this fall, and have recommended your make of engine to everyone, both in price and quality. Two parties, especially, who own an _____ engine, admitted to me that my Galloway Engine was much simpler than theirs and run just as nice. I will do what I can for your business in my neighborhood.

Joe A. Oliver, Seneca, Neb. Received your 5 H. P. engine about six months ago and it has never given me a minute's trouble since. Had an _____ and a _____, but the Galloway has them all skinned a city block. Have been working two days on another make to get it to run, but it isn't built to run.

Em Probst, Kennedale, Texas. I received the engine all O. K. and it is the simplest and smoothest running engine I ever saw. I have been running engines over 25 years and I would not give the 5 H. P. Galloway for any one I ever saw. Everyone that sees my engine says its a dandy. I am running a ten-cow dairy and I run a cream separator, and churn and pump, sausage mill and grist mill and am to get me a wood saw and an emery wheel and grindstone attached to engine. Anyone can run it. I can start it and go about my work, and I want to say it has the best governor that I ever saw.

Then I'll Save You from $50 to $300

If you do keep the Galloway, you won't have to pay for anything but pure engine value. I'll sell it to you at **actual cost to make** with just one small factory profit added. I'll save you **all the middleman's profits—put $50 to $300 in your pocket right at the start.**

Special! Get My Great 1913 Proposition

It's the biggest, finest thing I ever did. I can't explain it here—I'll have to write you a personal letter. But here's the gist of it. I'll show you how to get a Galloway engine partly or entirely **without a cent of cost to you,** no canvassing or soliciting either. **Get this offer sure.**

Big Engine Book FREE A postal or letter brings you a copy of my big 1913 Engine Book and full explanation of my Special 1913 Proposition absolutely free. Get this catalog—pick out the engine you want to use free—that's all. Now don't wait. Let me hear from you RIGHT AWAY.

Briggs & Sons' Duroc Jersey Sale.

It is, or at least should be, some satisfaction to a breeder to be able to present an offering of Durocs that will stand right at the head of the season's offerings for excellence, even though they do not bring as much money as they should, and this condition is the sort that prevailed at the recent sale of Durocs made by Geo. Briggs & Sons, Clay Center, Neb., on February 18th. Only one or two other offerings in Nebraska south of the Platte river were up to this offering, and purchases at such sales are sure to result in much good for the men who buy. The forty head at the Briggs farm were sold for an average of $53 per head. C. H. Koenig, Plymouth, Neb., topped the sale on Lot 28 at the low price of $87.50. This sow was easily worth twice the money, but as the offering was so uniform the buyers seemed to think there was no necessity of going higher, as they would about leave have some of the others. Colonel Callahan did the selling in a very efficient manner. Those selling for $40 or more are listed:

The Cockerton Poland China Sale.

Forty head of the tops in the James Cockerton Poland China sale made an average of $46.67. The offering was in splendid condition and deserved more money. It was an offering that any breeder could be proud of and those who attended the sale got good bargains. The local people were slow to take hold, but the attendance from the outside was quite strong. Col. Will Duncan cried the sale. Below we list those selling for $40 and over:

2.	C. C. Polly, Whiting, Iowa.	$65.00
3.	A. J. Larson, Whiting, Iowa.	50.00
4.	Robt. Hornby, Mapleton Iowa	52.00
5.	Dave McNeill, Castana, Iowa.	40.00
6.	H. Zentmire, Dakota City, Neb.	41.00
8.	Whiting Farm, Whiting, Iowa.	47.00
9.	Whiting Farm	66.00
12.	Jas. Crabb, Bronson, Iowa.	48.00
14.	W. M. Shrader, Stuart, Iowa.	51.00
15.	A. T. Jepson, Moorehead, Ia.	60.00

The Jepson Poland China Sale.

The Poland China sale of A. T. Jepson, at Moorehead, Iowa, on February 15th, was well attended and he sold a very useful offering. A number of his sows were bred a trifle late or they would have gone higher. No. 2 of the catalog was the top and went to O. N. Lewis, Mapleton, Iowa, at $59. No. 1 was a close second and went to C. M. Pederson at $59. Below is a list of those selling for $35 and above:

1.	C. M. Pederson, Dunlap, Iowa.	$59
2.	O. N. Lewis, Mapleton, Iowa.	61
3.	Mike Mikkleson, Moorhead, Ia.	50
4.	Axle Peterson, Moorhead, Iowa.	45
5.	Chris Nicholizer, Moorhead, Ia.	58
6.	Mike Mikkleson	40
7.	John H. Johnson, Moorhead, Ia.	38
8.	B. F. McCord, Moorhead, Iowa.	40
9.	R. Rounsberg, Moorehead, Iowa.	34
10.	W. J. Masters, Mapleton, Iowa.	55
11.	C. H. Dougaard, Moorhead, Ia.	46

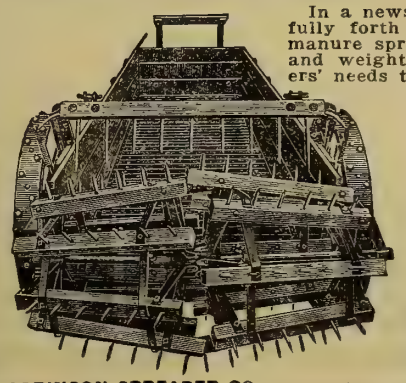
16.	G. B. Berg	45.00
18.	Art Mountain, Cumberland, Ia.	50.00
19.	Wm. Edwards, Atlantic, Iowa	62.00
20.	R. R. Turner, Atlantic, Iowa.	51.00

The Spreader That Spreads.



In a newspaper advertisement we cannot set fully forth the merits and advantages of this manure spreader. Its size and style and width and weight make it more suitable to the farmers' needs than any other on the market. It has a capacity of 60 cu. ft. It is low and easy to load, the front and hind wheels track with each other and track with a farm wagon. Being narrow, it is handy to drive into a barn and easy to back into a shed. Its weight is 1,420 lbs. and two good farm horses handle it easily under all ordinary conditions. Its operating parts are simple, strong and serviceable, guaranteed to do the work a manure spreader is intended to do. The sectional cylinder rotates outwardly and spreads to the width of the wheel tracks. It is an ideal spreader. Your implement dealer should handle it. Write for our latest folder describing it. Mousel Bros. and Others' Hereford Sale.

An average of $221.84 per head on the 114 head in the joint sale of Herefords made at Grand Island, Neb., on February 14th and 15th, under the management of Mousel Bros., was the sort of sale held and certainly is indicative of the strong demand that is manifest for Hereford cattle and should be a matter of much encouragement to all lovers of good cattle. The consigners, which included twelve prominent Hereford men of Nebraska and Missouri, were far sighted enough to include only good breeding stock, and with the exception of a few head the cattle were really very choice. A little more flesh would have been very acceptable on many of the cattle and a few consignments suffered materially for this reason. The buyers were gathered from Iowa, Missouri, Kansas, Idaho, Wyoming, Colorado, Minnesota and Nebraska. The first day of the sale made an average of practically $300, but in this average were included the two highest priced animals of the sale. The get of Beau Mischief, consigned by Mousel Bros., Cambridge, Neb., were the chief attractions of the sale. The writer had made the statement before the sale that as good bulls as we had seen pass through a sale ring in years would be in this sale. We are glad to know that they were appreciated. The top of the sale was a Beau Mischief bull, Beau Contender, and he went to Wm. Hutcheon, Bolckow, Mo. His brother, Beau Lindell 2d, went to the old established herd of Gudgell & Simpson, Independence, Mo. This is the first bull that has been purchased by this firm in many years and it is certainly some distinction to be able to supply such breeders. Only three head sold below $100, and they at $90 or above. Col. Z. S. Branson and E. D. Snell did the selling. The entire list of sales follows:

BULLS.

Don Augustus, calved June, 1911; Will Henn, Denver, Colo---------$335
Beau Donaldbain, calved December, 1911; E. C. Rodwell, Cambridge, Neb. ---------- 210

The Fowler Poland China Sale.

One of the real good sales of Poland Chinas of central Nebraska was held by Morris Fowler, Arcadia, Neb., on February 12th. The forty head made an average of $44 and went to a number of new herds. Mr. Fowler has enjoyed a splendid trade in his nearby territory and it certainly has been due him, for he has put up a grand good lot of stuff for his customers. His great young boar, Tom Sampson, was much admired by those present and the preference for sows bred to him was very marked. Sales of $35 and over are listed. Colonel Jensen, of Iowa, did the selling:

1. J. D. Bridges, Arcadia, Neb-----$45
2. J. D. Bridges---------- 45
3. J. L. Snodgrass, Arcadia, Neb--- 46
4. Theo. Schultz, Arcadia, Neb----- 41
5. J. L. Snodgrass---------- 46
6. C. R. John, Arcadia, Neb--------- 56
7. C. Sorensen, Arcadia, Neb------- 46
8. C. R. John---------- 56
9. J. D. Bridges---------- 55
10. C. R. John---------- 56
12. S. C. Sorensen---------- 45
13. Bob Stone, Arcadia, Neb--------- 44
14. Bob Stone ---------- 41
15. F. W. Fowler, Arcadia, Neb------ 45
16. Bob Stone ---------- 41
17. E. E. Slocum, Comstock, Neb---- 44
18. Bob Stone ---------- 44
19. W. A. Lingford, Dannebrog, Neb. 50
20. R. F. Rowe, Arcadia, Neb--------- 40
21. J. B. Hughes, Arcadia, Neb------ 53
21½. J. B. Hughes---------- 53
24. Geo. Slocum, Arcadia, Neb------ 39
25. John Te Poel, Arcadia, Neb----- 40
26. Albert Johnson, Loup City, Neb. 67
27. John Te Poel---------- 63
5½. R. F. Rowe---------- 50
0. Albert Johnson ---------- 70
00. Herman Luedtke, Loup City, Neb. 62

The Phelps & Case Horse Sale.

Fairly good weather prevailed the day of the Phelps & Case horse sale at Hastings, Neb., on February 5th. There was a large crowd of out-of-town people, a few from Iowa and Colorado, but the bulk of the crowd from Nebraska. It looked very favorable for a good sale at the outset, but those most interested in the outcome of the sale were certainly disappointed. Mr. Case sold all of his horses, as he was moving away. Mr. Phelps sold all but a few head. The buyers from away were there for the very best horses, and as the competition was not as keen as it should have been for the more ordinary ones, there was a good lot of bargains. Mares were in good demand, but stallions were slow sale. The offering sold made an average of a little less than $400 per head and the buyers were C. A. Skoog, Holdredge, Neb.; H. A. Johnson, Red Cloud, Neb.; S. R. Sidders, Giltner, Neb.; W. H. Gallentine, Inland, Neb.; R. E. Bradley, Juniata, Neb.; L. Wall, Ruskin, Neb.; W. Harmon, Trumbull, Neb.; R. M. Terrill, Hastings, Neb.; Henry Uden, Hastings, Neb.; F. P. Wells, Hastings, Neb., and E. H. Goudy, Kenesaw, Neb. Col. Z. S. Branson did the selling.

Crow's Poland China Sale.

Although the sale of Crow-type Poland China sows was stopped when only about one-half the offering had been driven through the ring the sale made a good average. Thirty-seven head sold for a total of $2,609.50, making an average of $70.50. It was one of the banner offerings of the year and one of the very best that Mr. Crow has ever put in a sale ring. He will hold his postponed sale on March 12th and it will be a chance for someone to buy the best that the breed has to offer. Breeders who are still a little shy on the sow stuff that they can handle this year will do well to bear this date in mind and be at the sale to get some of this well-bred offering. Col. W. R. Ritchie cried the sale and worked rapidly to get as many of the hogs sold before the crowd was driven away by the storm. Following is a list of the sales:

1. I. J. Conrad, Melbourne, Ia--$ 77.50
2. Kluge Bros., Alta, Iowa------ 81.00
3. C. H. Drake, Hazleton, Iowa- 77.50
4. J. H. Snyder, Windom, Minn. 70.00
5. J. W. Moriarty, Webb, Iowa- 80.00
6. W. Kluge, Alta, Iowa-------- 75.00
7. S. C. Egler, Marathon, Iowa- 65.00
8. Loren Howe, Dickens, Iowa- 86.00
10. J. M. Craig, Sioux Rapids, Iowa ---------- 65.00
11. Kluge Bros. ---------- 71.00
13. J. H. Snyder---------- 65.00
15. Loren Howe ---------- 80.00
16. Kluge Bros. ---------- 91.00
17. J. W. Lane, Rhodes, Iowa---- 62.50
18. J. H. Snyder---------- 52.50
21. Kluge Bros. ---------- 65.00
23. I. J. Conrad, Melbourne, Ia-- 76.00
24. J. D. Cairns, Dickens, Iowa-- 72.50
28. O. H. Sinby, Westbrook, Minn. 100.00

WILLIAM GALLOWAY. Pres.

Shipped FREE!

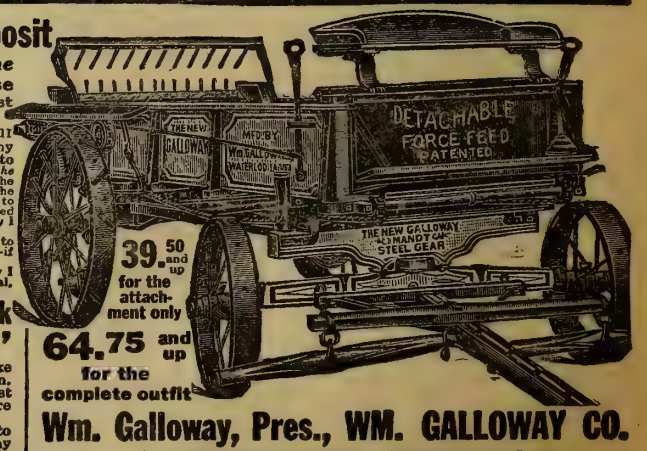
Yes, ABSOLUTELY Free—Not One Cent Down—No Bank Deposit

I don't want you to send me one cent for this spreader. No sir, *not one cent.* I don't even ask you to sign any mortgage, lease or note or even promise to buy it. I won't let you take *any* risk of any kind or nature. I'm making the most daring offer I've ever made and I'm banking on *my* spreader *and your judgment.*

Here's my plan: I'll ship you one of my new 1913 Model Galloway Spreaders right to your farm without even a dollar's deposit. I want you to take that spreader and test it in a way that would put any other spreader in the world on the scrap heap. I'll even tell you how to do it. Hunt up the toughest manure to handle you can find. If you've got any heavy, tramped-down, unrolled, frozen slough hay manure in your calf yard, *that's just the stuff to use.* If you can't find anything tough enough on *your* farm, get a load from one of your neighbors. let him watch the test, too. Drive out into the field; *get your team on the gallop* AND SLAM IT IN GEAR! Don't you worry about smashing the machine—*remember, it's a Galloway you're using now.* Besides, I'm taking the risk—*not you.* I've been putting the Galloway to tests like this for seven years. 40,000 farmers besides myself know what the Galloway will do. Study out the exclusive patented features—the things that make it easy for the Galloway to do things that would *wreck* any other machine in the world. See *why* I can make this offer, *why I can guarantee it for a year, me and back that guarantee with a $25,000 bond.*

Take a month to make up your mind—use the spreader all that time anyway you want to. Then, if you can't honestly say to me: "Galloway, your spreader is better than I ever thought a spreader could be and I don't see how I can get along without it"—if you can't say and mean every word just sent it back to me and I'll pay the freight *both* ways so you won't be out a cent.

If you want to keep it, I'll absolutely guarantee to save you $25 to $50 on the very *best spreader in the world.* That's why I say: "The Only Way is the Galloway". Selling direct from factory to farm, every middleman's profit cut entirely off; the actual, net factory price with just one small profit added.



39.50 and up for the attachment only

64.75 and up for the complete outfit

Wm. Galloway, Pres., WM. GALLOWAY CO.

Here's What Your Neighbors Say:

Gentlemen: I received the spreader all O. K., and have it now nearly six months. I have never had any trouble with it at all and I like it very much. I would not be without one now for a great deal. My team weighs 2200 pounds and will handle it even on plowed ground. This morning I spread a load and there was two inches of snow on the ground, but the wheels did not slip, even without the mud lugs.

Yours truly,
Walter Ensign.
Killawog, N. Y.

Dear Sir: I received your wagon box spreader and am more than pleased; it does the work far better and is much easier on the team than I expected. My little mules handle it easily and they only weigh 900 lbs. The farmers come from all around to see it work and most all say they are going to have one of them.

Yours truly,
F. J. Robinson.
Navina, Okla.

My Special 1913 Offer

I've got a new proposition for 1913 that's so much bigger and more liberal than anything I've ever been able to offer before that there's simply no comparison. Listen—if you decide to keep the Galloway after having had the free trial, I'll tell you how you may get it partly or entirely free. No canvassing—no soliciting. Just the fairest, squarest, straightest, cleanest co-operative offer that anybody ever made. I can't explain it all here and I won't try to. But I'll tell you all about it in a personal letter if you'll write me right away.

My Regular $1.00 Book "A Streak of Gold" Sent FREE Nothing else like it ever written. Tells plainly just how to produce manure, store it, treat it, care for it and use it. This book is worth $25.00.

Price regularly one dollar a copy. I'll send it to you free in addition to a full explanation of my record-breaking, 1913 proposition and my big spreader catalog so you can pick out just the spreader you want me to send you on this free offer. A postal or letter is enough. Don't lay down this paper 'till you've sent it.

Ruebel Bros.' Poland Sale.

The Poland China sale of Ruebel Bros. at Marathon, Iowa, on February 20th, in which they sold forty-eight head, brought them an average of $70.70. The sale was well attended and a large number of the sows that were sold went to some of the best breeders in the state and some to men prominent in this line of breeding outside of the state. The top of the sale was No. 1, a sow, which went to Mendenhall Bros., Audubon, Ia., at $190. A spring gilt, No. 39, sold for $142.50 to J. M. Nelson, Litchfield, Minn. A large attendance was present and the sows that were sold went to both farmers and breeders and all at pretty good prices. Col. H. S. Duncan was in charge of the sale. The following is a list of the sales and the buyers:

1. Mendenhall Bros., Audubon, Iowa ----------$190.00
2. C. L. McLaughlin, Marathon, Iowa ---------- 87.50
3. J. C. Munday, Rockwell City, Iowa ---------- 135.00

The Jones Poland China Sale.

A very successful sale of Poland China bred sows was made by Orville O. Jones, York, Neb., on February 21st. It was a very stormy day and the attendance was small. The gathering was about equally divided between farmers and breeders and they were very liberal in their bidding, although no high prices were paid at any time. The nice average of $46.40 shows that these hogs were appreciated and they were certainly deserving of the support they received. The herd boar, Jumbo the Great, was well liked by all who saw him, and he is surely one of the great big, heavy-boned boars of Nebraska right now. He is a sire of the right sort of stuff and is becoming more and more popular each year. Mr. Jones is just one of the most careful farmers and stockmen in the central part of the state and his influence for good stock is far reaching. Those of our readers unacquainted with him and his herds and flocks will do well to know him. Colonel Callahan did the selling and those bringing $40 or more are listed:

1. J. K. Regier, Henderson, Neb---$51
2. J. L. King, York, Neb---------- 50
3. J. K. Regier ---------- 52

Farver's Goliath Sale.

The following report of the sale of bred Poland China sows held by E. E. Farver, Ocheyedan, Iowa, although delayed in publication, will be of interest to those who breed the big type of this breed, for the class of the sows that were in this sale was about as high as those in any sale of the year. The gilts that were sired by Mr. Farver's great breeding boar, Farver's Goliath, were pronounced by all who saw them to be one of the best lots by any one sire that they had seen. Many declared that they were the very choicest that had been driven out in any ring this year. It seems too bad that the attendance of breeders who would appreciate the high quality of this offering was not greater. On the thirty-nine head sold the average was a little more than $4 each. The following is a list of the buyers:

1. Walter Pfeil, Worthington, Minn. ----------$ 52.00
2. M. P. Hancher, Rolfe, Iowa-- 54.00
3. H. W. Van Valkenburg, Osakis, Minn. ---------- 60.00
4. M. A. Maxwell, St. James, Minn. ---------- 65.00
5. R. A. Schug, Coleridge, Neb. 102.50
6. L. Yesky, Bigelow, Minn---- 50.00
7. Henry Minden, Bigelow, Minn. 52.00
8. Seigman Coyer, Ocheyedan, Iowa ---------- 47.00
10. F. A. Schaeffer, Raleigh, Ia--- 60.00
11. J. M. Peery, Alvord, Iowa---- 85.00
12. Wm. Foley, Melvin, Iowa----- 50.00

39 head ---------$2,116; aver---------$54

The Nuckolls County Horse Breeders' Association Sale.

The Nuckolls County Horse Breeders' Association met with a very stormy day for their first annual sale that was held at the fair grounds at Lincoln, Neb., on February 20th. The bad day cut the attendance a great deal and this fact cut the range of prices very materially. There was a brisk demand for mares and some very choice young ones were sold in this sale. The state of Nebraska has at the present time a stallion law that is taking anywhere from 20 to 50 per cent off the value of practically every stallion offered for sale within the state. The fact that almost any kind of a blemish bars a stallion from standing under this law makes the buyers timid about putting a lot of good hard coin into a stallion purchase, even though he is ever so good. This law has been declared unconstitutional in the court of Howard county, Nebraska, and as the case has been appealed by the board to the higher court and was, at the time of this sale, up for a rehearing, the stallion buyers all over the state are inclined to wait until they see the final outcome of the case, and in the event that the law is upheld stallions will certainly decline in price still further. The law just mentioned has probably cost the breeders making this sale a big lot of money and is costing every stallion owner large sums all over the state. The stock sold in this sale was practically all grown by the men making the sale, and while they did not get value for their horses, yet they made a profit by growing them, even at the prices received. These men mean to stay in the business unless legislation of different sorts puts them out, and they intend to make these sales annual features. The thirty head made an average of practically $400 and the buyers were Jackson Bros., Thompson, Neb.; F. B. Good, Nelson, Neb.; B. N. Lewis, South Bend, Neb.; Fred Nuns, Geneva, Neb.; Walter Petz, Nelson, Neb.; Andy Bradley, Davenport, Neb.; G. H. Smith, Ruskin, Neb.; G. M. Clark, Raymond, Neb.; Grant Whitney, Palmyra, Neb.; John Peterson, Davey, Neb.; J. S. Gilbert, Lincoln, Neb.; W. H. Bowman, Beatrice, Neb.; Jos. Rouselle & Son, Seward, Neb.; Milton Kaufman, Fairbury, Neb.; Geo. Clark, Lincoln, Neb.; A. S. Anderson, Ruskin, Neb.; J. E. Macrum, Haigler, Neb.; J. B. Smith, Ceresco, Neb., and R. S. Hall, Clarks, Neb. Col. F. M. Woods conducted the sale.

The Halford Poland China Sale.

The sale of R. W. Halford, at Manning, Iowa, on February 21st, encountered the storm in its full fury last week and was up against it, and yet, in spite of the conditions, he sold fifty head at an average of $64.52. The top was No. 2 of sale, a daughter of Big Chief, and she went to Tim Neuhofel & Sons at $167.50. Mr. Halford sold a splendid lot of sows and had conditions been different it would have been much higher. Col. Harve Duncan cried the sale. Below we list those selling for $40 and above:

2. Tim Neuhofel & Sons, Central City, Neb. ----------$167.50
3. Andrew Stewart, Harlan, Ia- 82.50
4. W. E. Zimmerman, Neola, Ia. 137.50
5. Chas. J. Biewen, Ames, Iowa 75.00

48. G. W. Goslee, Kenton, Ohio-- 60.00
49. Willard Zeller ---------- 40.00
50. Henry Rohr, Manning, Iowa- 45.00

The Zimmerman Poland China Sale.

The big snowstorm of the winter season caught the W. E. Zimmerman sale on February 22d and yet he made an average of $41, which was very satisfactory under the circumstances. No high prices were paid, but it was an even sale. Sows bred to his splendid young boar, Pawnee's Price, were sought after and this boar made an excellent impression on those who attended the sale. He is a son of the great Smooth Price and is one of the very best in western Iowa. We list herewith those selling for $35 and over:

1. Harry Scott, Weston, Iowa---$57.50
2. J. W. Bell, Underwood, Iowa- 50.00
3. Carl Mark, Neola, Iowa------ 52.50
4. Henry Scott, Weston, Iowa--- 75.00
5. F. W. Dewey, Neola, Iowa---- 41.00
7. C. W. Humerick, Atlantic, Ia- 65.00
9. M. J. Doyle, Neola, Iowa------ 38.00
10. Harry Scott ---------- 55.00
11. John Hatfield, Neola, Iowa--- 35.00
12. F. Nelson, Weston, Iowa------ 47.50
13. J. A. Lewis, Neola, Iowa------ 35.00
14. F. W. Dewey---------- 42.00

Gilbert Johnson's Poland China Sale.

A very successful sale of Poland Chinas was held by Gilbert Johnson, Osceola, Neb., on February 11th. The buying was snappy from the start and the good average of $41.50 was made on the forty head sold. Col. A. W. Thompson did the selling and rendered splendid service. Those selling for $35 or more are listed:

1. C. W. Lundberg, Osceola, Neb.$90.00
2. Orville O. Jones, York, Neb-- 70.00
3. Ed Seronstrum, Stromsburg, Neb. ---------- 50.00
4. A. J. Johnson, Stromsburg, Neb ---------- 48.00
5. W. F. Thalendar, Osceola, Neb. ---------- 50.00
6. P. Lindholm, Stromsburg, Neb. ---------- 55.00
7. P. Lindholm ---------- 45.00

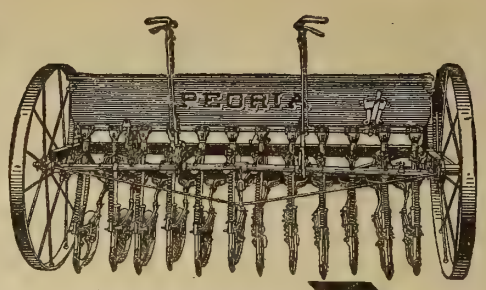
The Only Tractor For Small Farms That Can Be Used Economically

EVERYONE is familiar with the development and success of the big tractor. It cannot be employed economically on small farms. The Hackney Auto-Plow was designed and built especially for *small farms*—farms of average acreage. It is equally successful on large farms. Years were spent in perfecting it. It has been tested in all parts of the country, in all kinds of soil, under all sorts of conditions and has always *made good*. It does the work of a dozen horses and two men plowing.

It will also do the **seeding, disking, harrowing, harvesting, threshing, wood sawing, road grading, feed grinding, ensilage cutting** and all other work where power can be applied. It is a tireless worker, day or night, and enables the farmer to do his work quicker and better and at the time when weather, soil and other conditions are all in his favor. It solves the labor problem and eliminates drudgery. It is so simple in construction and easy to handle that it is really a pleasure to operate. In price it is within the reach of all. Before you buy a tractor we want you to investigate the Hackney Auto-Plow—the **one-man** outfit. Catalog, photographs and letters from actual users will be mailed on request.

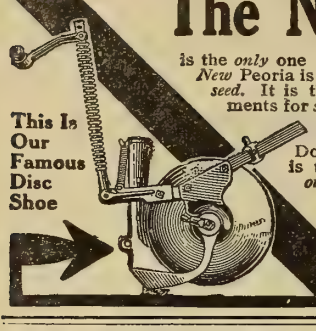
HACKNEY MANUFACTURING COMPANY, **608 Prior Ave., St. Paul, Minn.**

The Only Drill With a Perfect Furrow Opener



Here's the drill that will greatly increase *your* crops and profits, just as it has done for hundreds of *other* progressive farmers. It is equipped with our wonderful DISC SHOE FURROW OPENER, the *only* one that combines *every* advantage of the *single disc* for cutting trash and penetrating hard ground, with every advantage of the *shoe*, for forming the furrow and depositing the grain. It's the only furrow opener that *packs* the seed bed after the *disc* has *opened* the furrow. The *shoe* carries the seed to the *bottom* of the *packed furrow*. Every seed counts. Every seed is sown at a proper, *even* depth. So *every stalk* comes up and ripens *evenly* and the grain *grades* up best. The shoe prevents any dirt from falling into the furrow until *after* the seed is deposited.

The New Peoria Drill—



is the *only* one equipped with this *Disc Shoe Furrow Opener*. So the *New* Peoria is the drill that is sure to *increase* your *crops* and *save* your *seed*. It is the drill that insures *every* seed the three *essential* requirements for *successfully* growing small grain—Heat, Air and Moisture. Even if you have a new drill of some other make, it will pay you well to discard it and buy a New Peoria. Do not think that the wonderful Disc Shoe Furrow Opener is the *only* advantage of the New Peoria Drill. Every *other* part is just as superior. Let us *prove* it. Let us send you a *booklet* and all the *facts* and *figures*, also opinions of *men who know*. Send your name and address on a postal *now*. It's worth money for you to know all the details.

$595 And It's Easily Worth $850.00

Just Think of It

Galloway's Auto Transport

Farmers, Business Men and Pleasure Seekers! Here is Galloway's latest pet—his Auto Transport—so called because it will actually go through snow and mud and transport anything or anybody—anywhere—or any time—safely, cheaply, economically—and you can buy it at a price that was never equalled in the history of the auto business before and on terms so easy that you will hardly realize you are paying for it.

It Does the Work of Three Teams

Is Built for the Hardest Wear and is a Wonderful Convenience and Money Saver

With this rig you can do more work in one-half the time than three men and three teams can do in a day. It hits the nail right on the head and it is built for the hardest wear and tear. It is guaranteed to give the best of service and satisfaction. Notice the size of the wheels, the large hubs, heavy, durable spokes and rims, axles strong and yet not too heavy, and wheels of just the happy medium—neither too high nor too low. You can put on the back seat and take your family to church or for a pleasure ride; you can haul your pigs, calves, sheep, milk, poultry, eggs and vegetables to market and be back home again before you could even reach town with a horse and wagon. Just think of the convenience of a rig of this kind. When you want something from town in a hurry you can jump into this transport and you have got it before you know it. You can go to town for your groceries, flour, feed, furniture, hardware, cement and lumber or anything you can think of and you can do it cheaper than you can drive a horse and wagon.

HOW I MAKE THE PRICE

There is only one way that I could make a price of $595 on a rig of this kind, and that is by making them in big quantities. Remember this auto transport is no toy. It is practical, durable and built of the best material that could possibly be used for the purpose intended, and will give you all the service and satisfaction any car could give you even though it cost you twice as much. **Send for full description and my special introductory offer that will help you pay for the transport and make you money at the same time. Write me today and you will be mighty glad of it**

Vocational Training for Boys and Girls.

By Edwin G. Cooley.

IT IS SOMETIMES contended that the responsibility of the public for the education of the masses ends with the elementary school. Those destined for the professions, the executive positions, and the leisure class may enter the public high schools and state universities, and obtain an education leading directly or indirectly to vocational efficiency. Not everyone, however, seems to be conscious of the fact that the great masses who leave school at fourteen—either from choice or from necessity—to enter into vocational life are entitled to as careful consideration in our educational plans as their more fortunate brothers. As a matter of fact, this great 90 per cent needs vocational training, and have as good a right to expect it at the hands of the public as their brothers who enter the so-called "higher vocations."

We contribute to the support of the public schools on the ground that they are necessary to the perpetuation of our free institutions. We urge that a certain minimum of instruction and training is indispensable as a preparation for citizenship, and the training in character connected with the acquisition of the minimum is of great importance in this preparation. We are now beginning to see that we are permitting the boys and girls to leave our public schools at fourteen, just at the time when they most need guidance and instruction, just at the time when character-building really begins, and just when they should be objects of special attention in our educational plans. The state cannot continue to expend vast sums of money in high schools and universities, and neglect the 90 per cent who now go into vocational life with only elementary school training, without repudiating the reasons usually given for having schools of any sort as a public charge. If self-preservation through the training of the character of the future citizen is the justification for spending money for schools, the state must enter the entire field of vocational education, and provide for all, the artisan, the professional man, the farmer, and the merchant. Justice to the individual as well as self-preservation of the state demands this.

It should be difficult to overestimate the value of our system of elementary schools! The general education given in them is the necessary basis of all vocations, academic or industrial. While these schools are in need of improvement and probably will in the future devote greater attention to the training of eye and hand, this training should be given on account of its pedagogical importance rather than of its vocational utility. The eight years of general training of the elementary school system should not be shortened to make room for any scheme of vocational training. Any attempt to substitute for this a training for mere skill and instruction concerning machinery and processes of production will be fully as apt to hinder as to further the development of the mental powers.

It is sometimes proposed to provide vocational training for the backward children in the elementary schools. While experience has shown that much can be done for these unfortunate children by the introduction of the manual arts, the instruction of pure vocational training may lead to the forming of false ideals in the minds of the pupils in the elementary school. It may lead to the assumption that general training is of little importance for the mechanic, and it is also quite apt to lead to the impression that manual labor, skilled or unskilled is the proper employment for children of lesser ability, while the gifted may expect work in profession. This ideal is undemocratic and foolish. It would be better to hold up the ideal that skilled manual labor is just as honorable as work in an office, and more profitable, and that it requires a much higher degree of character and ability. In short, we should strive to check the rush of our youth away from the shop and the farm into the office.

Roughly speaking, the age of fourteen, the beginning of the age of adolescence, marks the end of this general training for nine-tenths of the boys and girls in civilized communities; it marks the end of the period of compulsory attendance, as provided in the laws of civilized countries. The problem of industrial education, therefore, is a problem of adolescence. We are only beginning to recognize our responsibilities to the adolescent, to recognize that he is entitled to our guidance and care, and that he needs it probably more than he has at any previous period of his life. He is at the parting of the ways; he is ceasing to be a child, but is not yet a man; he is beginning to be interested in matters related to his life work, in the problems of society, and of the state. More can now be done towards training his character than at any previous or subsequent period of his life. One of the blunders of civilized countries, a blunder that has led to an enormous increase in the number of youthful vagabonds and criminals, has been to neglect the adolescent, and to act as though there were a sharply defined line separating the child from the man, and that it is feasible and wise to care for the child systematically up to fourteen and then leave him abruptly and absolutely to the tender mercies of the factory and street.

If we are to undertake the further training of these boys, we must consider their newly awakened needs and interests; we must recollect that there is a limit to the amount of instruction along academic lines that they are ready to receive. If we attempt to keep them in a school of any kind, and repeat the sort of instruction they have been receiving during eight years of childhood, we shall disappoint a majority of them, and leave them bored, sullen and obstinate. If we wish to hold them longer, we must arouse their interests by connecting the school with their vocation. Through this interest, we may hope to succeed in giving them some all-round cultural training—training that will not only make them more efficient bread-winners, but better men and better citizens.—[From Report to Commercial Club of Chicago.

It is not too early to put the horses that have been loafing through the winter into training for the work season that will soon be with us. Sore muscles and tired nerves do not feel any better to the horse than they do to a man.

CREDITABLE ROAD WORK.

To the Editor of The Homestead:

I have been reading an article in your paper written by Dean Raymond on permanent roads wherein he stated that it would be necessary to cut down the grades in making roads. I would like to ask how that is to be done. Most of the roads that are being worked at present or the majority of them, are being graded so that the hills and high places are being made higher by grading the dirt from the side of the road to the middle and it seems the higher they can get the dirt in the middle and the steeper the grade, the better it suits them.

I notice the fact that money is thrown away on the roads mentioned. Why is it thrown away and who throws it away, the road overseers by not doing enough work or the parties who hire the work done, say for instance the trustees or the county supervisors. I would like to get at the bottom of the trouble.

I have been quite interested in the good road question myself, having been a road overseer for five years and have handled quite a lot of dirt during that time. For the last three years I have made quite a study of the problem and have tried to make the grades better instead of worse. In my opinion forty rods of work done right so that the public can travel in the middle of the grade when finished is far better than two miles with none of it done right, compelling the public to travel on the side of the grade the year round.

The first two years I tried to please everybody and get over as much territory as possible, but I came to the conclusion that the best a man can do is poor enough and whatever was done should be done right, no matter if it was only a mile.

Road work will soon begin and if anything is going to be done to remedy the matter it must be done quickly. As a rule where the roads are graded with a grader, near bridges where the work needs to be done it is left undone and over the tops of hills where the road should not be made higher it is generally raised, instead of taking the dirt to the low places.

As to mowing the sides of the roads, will say that I think it is the duty of the road overseer to leave the ditches in condition so they can be mowed with a machine where it is at all possible to leave them that way. I know of miles of road where it is impossible to mow along the roadside on account of the ditches made by the grader. The grader can be used to slope the sides of the ditches so a mower can be used and the dirt left in the middle of the road. People find fault that the grass and weeds are not mowed along the road, but whose fault is it? Stop and ask.

Mark Baker.

REVISE KANSAS GAME LAWS.

A complete revision of the Kansas fish and game laws has been made by the joint fish and game committees of the house and senate. The bill has the approval of Professor Dyche and sportsmen and there is little doubt of its enactment about as it is drawn.

The important changes are:

Quail and prairie chicken cannot be killed at any time.

Boys under fifteen years old cannot go hunting under any circumstances and carry a gun unless accompanied by an older person.

Doves are declared game birds, instead of insect-eating birds, and may be killed from August 1st to October 1st, provided not over twenty doves are shot at one time.

Every man must have a license to hunt and to fish. Women and boys are not required to have a license.

A day's shooting of wild ducks is increased from twelve to twenty. Ducks may be shot over live decoys, they may be shot while sitting on the water and they may be shot at any time of day.

At least 50 per cent of the fees collected from hunters as license fees must be devoted to the propagation and protection of game. At present practically all the fees have gone to the propagation of fish.

The present system of deputy fish wardens throughout the state is abolished and eight deputy fish wardens, each to receive $1,000 a year and expenses, are provided.

These are the points on which there has been so much contention between the sportsmen and the game warden. They have been worked out and the law as it was reported is regarded as satisfactory to the sportsmen and the farmers.

There's Only One Safe Way to Buy a Buggy

Here are a few of the things to look out for

First—See your buggy before you buy. There's a mighty big difference in buggies.

Second—be sure it is made by a manufacturer who has a *reputation for making first-class buggies.*

Third—Buy of a dealer you know.

Fourth—Don't buy an Eastern-made buggy They are not built to stand the strains of our western roads.

Fifth—Don't buy a cheap-priced buggy. It will look shabby in a short time, cause heavy repair expense and go to pieces quickly. A really *first-class* buggy—the *Kratzer*—costs only a little bit more, looks better, is much easier riding, and stands the wear and tear because it is built *in* the West to suit Western conditions. Best—and cheapest in the end.

Kratzer Quality Carriages
Are sold by reliable dealers

You get the most in buggy beauty and endurance in a Kratzer All wool broadcloth or genuine leather backs and cushions, springs of the finest tempered Cambria steel, tires put on "hot-set" by hand, only the best selected seasoned hickory, drop forged iron reinforcement at every point of strain, the famous Wilcox all-steel fifth wheel, every bolt, nut, stick and rod made to last for years This is the kind of buggy you want.

Send this coupon for inside facts

We have some very interesting facts on buggies and carriages which you should get at once Just mail the coupon and you will receive this information by return mail. Don't put it off Send the coupon *now.*

EMERSON Auto-Cultivator

This cultivator is different than any cultivator you have ever seen. It is so built that the wheels, and the gangs with the wheels, are turned at will, like the front wheels of an automobile, hence the name "*Emerson Auto-Cultivator No. 35.*"

Quick and Easy This construction enables you to *instantly* change the direction of the wheels and shovels without changing the direction of the team. It makes a much *quicker* and *easier* turn in cultivating crooked corn than where you must swing the gangs as in the old style machine.

The Foot-Lift The *patented* foot-lift device insures the shovels going back to the same depth of penetration after turning as they were before you raised the gangs at the end of the field—a feature that makes perfect cultivation easy. More new, time and labor-saving features in our Auto-Cultivator than others. That's why it's the leader.

Write for Details Write for our special circular. Give us an opportunity to prove to you that the EMERSON Auto-Cultivator is a big step in advance of anything in the riding cultivator line. Write *today*, before you forget it, for Booklet No. 7.

Campbell's Winter-Chaser

ARE you thoroughly posted about the heating question? Do you know what "Rotary Air Movement" means? Do you know who invented it, and why it is vitally necessary to the health and comfort of your family, the efficiency of your heating plant, and the good you get out of your coal?

Remember, this heating question is a mighty important one—you do not change your heating plants often, and when you do, it should be with a view to getting a *life time* service. To prove how and why this is possible with our *all steel* Campbell Winter-Chaser, we will send you, *free*

"TWICE-A-DAY"

A Book on Health and Heating

The story of the *guaranteed* heat to 70 degrees, and the longest wearing, strongest furnace made. In this book we explain why you should have the Campbell Winter-Chaser in your home—large or small, new or old. It tells about the need of *moist and clean* air as well as *warm*, and explains why the large reservoir and the ample air chamber with entrance door insure all the necessary moisture and cleanliness which mean health to the family and long life to the furniture.

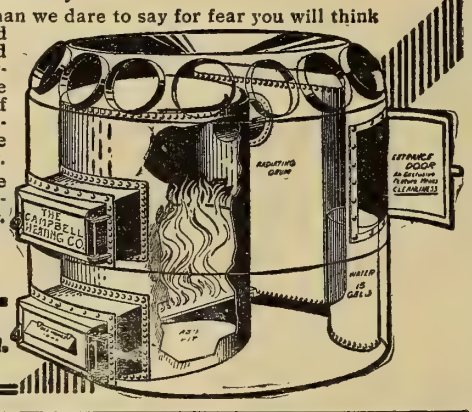
The Winter-Chaser Is Guaranteed To Give Most Heat With Least Fuel

And this statement is a calm fact which letters from happy owners prove,

And the Repairs Are Not Worth Mentioning

With ordinary care the Winter-Chaser will last a lifetime, and there is rarely a penny spent—for ten or twelve years.

The saving in coal is more than we dare to say for fear you will think we are exaggerating. So we would rather send you the booklet, and let you read these facts for yourself in black and white with the owner's name at the bottom of the letter. Those are the statements that count and there are plenty of them in the booklet.



Besides you ought to have the information and heating suggestions it gives. So write *today*. Address

WITH THE EDITOR.

Last year America had a visit from a distinguished Englishman, Arnold Bennett. In his own country Mr. Bennett has been for several years reaping fame and shekels from his novels, one of which, "The Old Wives' Tale," is the best known in this country. Before talking of "The Old Wives' Tale," I wish to give our readers an extract from "Living on Twenty-Four Hours a Day," a late work of Mr. Bennett's, and one which greatly enlarged the circle of his readers on both sides of the Atlantic:

It has been said that time is money. The proverb understates the case. Time is a great deal more than money. If you have time you can obtain money—usually. But though you have the wealth of a cloak-room attendant at the Carlton Hotel, you cannot buy yourself a minute more time than I have, or the cat by the fire has.

The supply of time is truly a daily miracle—an affair genuinely astonishing when one examines it. You wake up in the morning, and lo! your purse is magically filled with twenty-four hours of the unmanufactured tissue of the universe of your life. It is yours. It is the most precious of possessions. No one can take it from you. It is unstealable and no one receives either more or less than you receive. Talk about an ideal democracy. In the realm of time there is no aristocracy of wealth and no aristocracy of intellect. Genius is never rewarded by even an extra hour a day, and there is no punishment. Waste your infinitely precious commodity as much as you will and the supply is not withheld. No mysterious power will say, "This man is a fool if not a knave. He does not deserve time; he shall be cut off at the meter." It is more certain than consols and the payment of interest is not affected by Sundays. Moreover, you cannot draw on the future. Impossible to get into debt. You can only waste the passing moment. You cannot waste tomorrow; it is kept for you.

"The Old Wives' Tale" is not exhilarating reading, quite the reverse. Which is not to say that it is not well written. Being the work of Arnold Bennett its technique could hardly fail to be admirable. The trouble is, it makes life seem so little worth while. However, those chapters which deal with the relations of parents and children are so very well done that reading them one feels as if a mirror were being held up to life.

Mr. Baines, a shopkeeper in Bursley, of the Five Towns in Staffordshire, England, had been a bed-ridden invalid for years when the story opens. Mrs. Baines managed the store and the house and the children, of whom there were two, Constance and Sophia. Mrs. Baines was a capable woman, equal to her three-fold duties, a good woman, too, as anyone in Bursley would tell you, but with all her ability and her goodness she was not able to manage her daughter Sophia, age fifteen when the story opens.

The struggle between Sophia and her mother began when Mrs. Baines informed her daughters that it had been decided they should niether of them return to school (Constance was sixteen), but that both should begin to make themselves useful in the home and the shop. It ended when Sophia, but that is to anticipate one of the few ripples which mark the calm of the story.

Sophia did not want to go into the shop. She expressed herself so decidedly on this subject that her mother used to implicit obedience and profound respect was astounded at her child's naughtiness. Being, as has been stated, a good woman, being also wise and tactful, Mrs. Baines proceeded cautiously with Sophia. Neither her goodness nor her wisdom nor her tact availed her except in so far as they made what would have been a rout become a retreat. At the last Sophia had her way—she returned to school, to prepare herself to become a teacher.

Circumstances into which we need not enter led Sophia voluntarily to leave school and enter the shop after the death of her father. While employed there she became acquainted with a commercial traveler, who fell in love with her at sight. Thereby precipitated the climax of Mrs. Baines' failure to control Sophia, a failure the more remarkable in that in dealing with Constance she was altogether successful. Sophia's will was as strong as that of her mother and while she never sought an encounter, when she made up her mind to go or to get or to have nothing stopped her. So, when she set her young affections upon Gerald Scales, a veritable prince in her girlish eyes, though in reality a worthless spendthrift and roue, she quietly and cunningly outwitted and overrode her mother without the slightest qualm of conscience, though her course in-

CASH IN ON THE OLD STOVE

Do you realize that you can discard your old stove with advantage and profit?

Lasts Longer In construction, workmanship and design. The Monarch is years ahead of all other ranges. It is made of malleable iron and steel. It has com-

Less Fuel plete triple walls—asbestos and steel. Full protection against damage by corrosion. The top and oven heat quickly. Every seam is riveted tight—no bolts

Less Work or stove putty to loosen and fall out. The Duplex Draft and Hot Blast Fire Box insure even heat and full use of

Better Cooking all the fuel. The polished top never needs blacking.

Money refunded if not satisfactory.

volved deceit and even theft before it culminated in an elopement.

It is significant of Bennett's treatment of the facts of life that he suggests no thought of Nemesis when misery and unhappiness overtake Sophia. So far as his point of view is concerned her life was no whit less admirable than that of her sister, Constance, who evolved from an affectionate and dutiful daughter into a loyal and dutiful wife, who in turn became a devoted mother.

(Contined next week.)

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

Each man's chimney is his golden milestone;
Is the central point from which he measures every distance
Through the gateways of the world around him.
—The Golden Milestone.

The fragrance of a sweet flower and the upright conduct of a good man make the world purer and better until the end of time.

Shrink not from any necessary responsibility or duty. Positive courage and decision have easily overcome many seemingly formidable obstacles. The courage to do the right is often more than half the battle.

A WORD OF WARNING.

In foreign countries, where young people are permitted less freedom, warning against promiscuous kissing is unnecessary.

But the mother of every American girl, if she has that girl's interests at heart, should instill into her from the moment she arrives at an age of understanding that the kiss is a solemn, tender, holy thing, but that when misplaced it becomes a dangerous thing.

A kiss is meant to express the rich, full treasure of the heart—love. And no man should dare to ask this token of regard from a girl unless he loves her and wishes to make her his wife.

Heed paid to a parent's wise injunction in the matter of promiscuous kissing would save many a young girl from unhappiness and misery.

IRONING TABLE LINEN.

Well-washed table linen does not represent finished work unless it has been well ironed and folded. It should be sprinkled more evenly and more heavily than any other type of clothes. Before ironing pull the cloth straight, in order to make the edges and corners even. Table linen should be ironed with a heavy iron, preferably on a large table, where free space makes it possible to have a large surface exposed without the necessity of constantly shifting the material. Always have the linen half dry on the wrong side and entirely dry on the right, to prevent mussing while folding.

HINTS FOR THE COOK.

To keep salt from caking in the shaker, place with it either a little cornstarch or a few grains of rice.—Mrs. N. L.

A tablespoonful of melted cocoa or chocolate stirred into the poor man's rice pudding quite changes the character of the dessert.

If you have trouble with cakes falling after they are put in the oven, try giving the pan a few knocks before it is put in. This causes the air bubbles to come to the surface and break.

A sweet biscuit may be made with ordinary biscuit dough, with the addition of chopped dates. Roll the dough quite thin, spread with plenty of soft butter, and then put on a thick layer of chopped dates. On top place another layer of dough and cut out with a small cutter. Bake in a hot oven.

For candying orange peels use only the thick rinds; soak the peels in water, changing several times, until they lose their bitterness; then put them into boiling sirup, and boil gently until they become soft and transparent; then take them out and drain, roll in powdered sugar and put in a dry place. The sirup which adheres to the peel will "candy."

To simmer is to boil slowly; if the liquor throws up bubbles above its surface it is boiling at a gallop, and will harden any meat that is cooking in it.

Fasten a wire hook to the handle of a grape basket. Hang over line when hanging out clothes and push along before you, thus saving much time.

SEASONABLE RECIPES.

Try this way of cooking parsnips: Pare and slice thin and fry as potatoes, taking about the same length of time, but cooking slowly, as they burn readily. When partly tender, to a large skilletful sprinkle over a tablespoonful of sugar and a little salt. Squash is very good cooked in the same way.

Creamed Turnips.—Cut peeled turnips into half-inch dice, boil in salted water and drain, pour over a cream sauce made of one cupful of hot milk, over one tablespoonful each of butter and flour rubbed together. Salt and pepper.

Macaroni with Cheese.—One-fourth of a pound or twelve sticks of macaroni broken into one-inch lengths and cooked in three pints of boiling salted water twenty minutes. Turn into a colander and pour over it cold water; drain. Make a sauce of one tablespoonful each of butter and flour and one and one-half cupfuls of hot milk and salt. Put a layer of grated cheese in bottom of baking dish, then a layer of macaroni and one of sauce; then cheese, macaroni and sauce, and cover the top with fine bread crumbs, with bits of butter dotted over it, and a little grated cheese. Bake until it is brown.

AMONG OURSELVES.

The cry of "Fire!" "Fire!" has been ringing in my ears ever since the disaster of a month ago. By the most strenuous efforts of our manager and his assistants the results of this loss have been minimized and we have been meeting "Among Ourselves" almost as cosily as though nothing had occurred to the great building and the machinery which sends out this paper. I feel as though I could preach a little sermon on this incident, but life is so full of occasions when some bear heavy, uncalled-for burdens and others receive without a passing thought blessings which they have not earned, that I refrain. But there are some who have been visited by the fire fiend and they have some notion of what it has meant to readjust, reorganize and renew such an enterprise as is represented in the Pierce Farm Weeklies. We of the Home Department would never have been aware that anything unusual had happened had we not been informed. Let us wish such loyal workers "success." For our program today, I will call on Mrs. S. H. S. to read us one of her original poems, which she calls

THE UNRULY MEMBER.

I've made my way wherever any wind of news has blown;
I've talked away by night and day, whenever not alone;
North, south, east, west I've traveled, over mountain, plain and hill,
For once you get the gossip germ you can't keep still.

I settle down quite often, and to quit I really try;
And I vow to cut out gossip, and let all scandal die;
But the breezes seem to taunt me, "Why, of course, we know you will!"
Then, before I think, I'm at it, for I can't keep still.

I've seen so many places where I'd like so much to stay,
But the old-time longing takes me to improve a lovely day;
I was never built for quiet, just to sweep my own home sill;
So I'm soon all robed and ready, for I can't keep still.

I've gone to rich folks' houses, and I've scattered tracts in jail;
I've proclaimed from lofty housetops all the good works in my trail;
I am such a social being, and with spicy news I thrill,
For I've got the gossip habit, and I can't keep still.

All nature looks so smiling, and my news today is good;
So I'll drop in at the "Circle," where we meet to sew for God; (?)
For it is no use resisting when once you feel the thrill,
If you get the gossip habit you can't keep still.

From house to house I'll visit, and at every cross street line,
And I'll swell with the importance of this latest news of mine;
I tell you there's no pleasure half as keen my breast to fill,
And this last is worse than ever, and I can't keep still.

So I'll hie me to the "Circle," and Endeavor meeting, too,
And you'll hear the whispered questions, long before my tale is through;
For though some folks will not tell things, they will listen with a will,
And that spurs me to my limit, and I can't keep still.

On the following Sabbath morning, as each settles in her pew,
You just note the eager glances, wondering "if it can be true?"
Though the pastor struggles bravely, all his pushing is up hill,
For the scandal germ is spreading, and folks won't keep still.

The Sabbath day is ended, and all nature is at rest;
Above the stars are shining, and the people "have been blest;"
But my tale will ne'er be sleeping, 'twill the church and city fill,
For thus grows the scandal microbe, for it can't keep still.

Oh! shades of Luther, Wesley, Roger Williams and the rest!
What sort of folks are waiting to receive the coming guest?
What sort of mothers had they, left to gossip to their fill?
Did they peddle shame and slander? Could they not keep still?

How oft one generation must be judged by that before,
For the mother leaves her imprint on her daughter evermore;
And the daughter reared in kindness ne'er with poison tongue will kill;
She's immune from scandal's microbe, so she can keep still!

Then, oh mothers, let us hasten to the cleansing fountainhead,
For life's little span is passing, soon we're numbered with the dead;
Cover o'er with Christ's own mantle what, if understood, might fill
All our hearts with deep compassion, and—let's all keep still!

You remember that our sister is a missionary in northern California. She has looked around, seen some

$850 Detroiter $900

How the Price Compares

Claims, without proof, are empty. The Detroiter claims much but proves more. Statistics tell us that the average price of all cars made in this country is $2419.93—the Detroiter is $850.

The average price of cars with full floating rear axle is $3447.32—$850 buys the Detroiter.

Cars with the platform rear spring average $3977.50—the Detroiter has it.

The long stroke motor is found on cars averaging $3596.19—it is a Detroiter feature.

The multiple disc clutch is found on an average of cars costing $3151.46—it serves the Detroiter.

Internal expanding brakes of surplus braking surface are found on cars averaging $4519—the Detroiter costs one-fifth as much.

All these leading features of construction found in cars averaging $3888.79 are found in the Detroiter at $850—and the Detroiter has four more.

The Detroiter enables the average man to own a car with all that is best in motor practice at a price well within his reach.

The Low After Cost

The average mileage of Detroiter cars in actual service is from 20 to 25 miles per gallon of gasoline and 100 miles on a quart of lubricant.

The light car weight and large size tires give long life to the rubber casings and keep this item exceptionally low.

The Detroiter is built so strongly and has such big factors of safety that it is practically as good the second season as the first.

Five Models for Selection.

The same standard 25 H. P. motor, 104-inch wheel base, 32x3 k., 2-inch tires are used in Roadsters and Touring cars. Top with side curtains and dust cover; windshield; kits; lamps; generator; horn and jack—with $850 model. In addition—Speedometer; Prest-o-Lite or electric outfit; quick demountable detachable rims; tire irons, etc., with all $900 models.

A WONDERFUL Farm Watch

Next to the jolting on locomotives, a watch used on the farm gets the hardest tests.

In both places the South Bend Watch is famous. Engineers on the Twentieth Century Limited, the well-known Chicago-New York train, use South Bends. So do hundreds of other railroad men.

The jolting your watch gets on your farm wagon is almost as severe as these watches receive in these cabs.

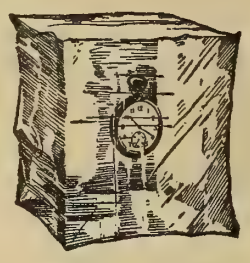
How South Bends Stand It

First, we build them with wonderful care and precision. The cutting of parts and assembling require a full six months. Then the parts are inspected 411 times. Then the watch complete is given a running test of 700 hours. We will *keep* it six months more, if needed, to make it *keep* perfect time. Some South Bends stay a year in the factory. But when they come out they are up to the highest standard.

"Tuned" to Your Pocket

Every watch should be regulated to the person who wears it, for different men give watches different treatment. If you walk a great deal, bend over at work, or ride most of the time in a jolting farm wagon, your watch must be regulated to offset those conditions.

A watch that runs stiffly can't be so regulated, hence seldom keeps time for anyone.



15,083 Expert Jewelers

The jewelers who sell the South Bend Watch are all expert at these regulations. They can make a South Bend Watch keep *Railroad* Time in your pocket.

Write for free book, "How Good Watches Are Made." It tells all about watches—things you should know. It tells all about the South Bend. Send for it now.

A South Bend can be had for $7.50, or in more expensive cases up to $75.

things and we are benefited by her observations. "The Unruly Member" appears to need as careful guidance in the mountains as on the plains, but when this "member" is wisely trained what beautiful things it produces to the great pleasure of the owner and the benefit of others. You know about "apples of gold in pictures of silver."

From the pen of Mrs. L. H. Palmer, Baraboo, Wis., I have for you something you will like, and I am happy to present her photograph for our Home Department collection. She writes to us about

THE HOME A SOCIAL CENTER.

The question is frequently asked, "What place do the home and homemaker occupy in the economic world?" There should be no attempt made to place a cash value on the influence of the home or the homemaker. Home means something too sacred to come into the commercial world. It means mother, father and the children. It stands for all that is lovable or worth living for. It is all that binds the human race together. The homemaker has a work to do, a holy service to render to the world, that is far above a money value. The home should be a social center, where old and young may meet for a social hour, and the children should be helped to feel that there is no place where they and their friends can have quite as good times as at home. If that spirit was fully lived up to it would do more to close the saloon doors than all the political "isms" together. There is an atmosphere of refinement, a feeling of cordial fellowship, about a home function that is never present as a public entertainment, however well conducted. The home affairs should be so managed that each individual understands that he is a part of the whole, with specific duties and obligations; that the material and social life of the home depends on the willing co-operation of the members. Parents should understand the necessity of training the children to willing obedience of home rule; that the home is a small republic, in which all have an equal right to work, play and share what comes in the way of success or the reverse, and as all know that "into each life some rain must fall," children should be taught to meet disappointment bravely and feel that they can do much to comfort those who are troubled. The family life should be so regulated that there will be stated times for work, study and social recreation. The holidays should be celebrated with appropriate entertainments and the children should understand the significance of the day, especially Christmas. Much of the discontent and dislike of work among children could be avoided if parents would go cheerfully about their own duties. Do not expect children to be willing workers when they constantly hear older people complain of the drudgery of their lives, and wish they might live without work, and denying themselves and families many pleasures that they may accumulate money enough to live in town where there is something doing. Suppose you get something started in the country. There is material all around in the bright boys and girls who ought to be kept busy, and all they need is to be guided by someone with matured judgment who has not forgotten how to be young. Invite the neighbors to help plan the work, so there will be time for parties, picnics and literary meetings. Organize clubs for culture and social purposes and when club evening comes don't be too tired to go, but take part in the entertainment and let the young people see that the old folks are alive and intend remaining so. There is nothing that will spur on the mental activity of the young like a literary contest in which old and young meet in friendly rivalry. We are too much given to cultivating that tired feeling, as we draw near life's meridian, and begin to think the new house, with its fine furnishings, is just a little too nice to give parties in, and there is no sense in the young people wanting parties. The home should be as fine as can be afforded, but there should be nothing too good for family use. There should be an abundance of good reading, music and games that the home life will be such that in after years, when the children look back to the dear old home, their sweetest memories will be of the quiet evenings spent at home with the family. The home should radiate good fellowship that, expanding in ever-widening circles until meeting counter currents, the community will be united in a harmonious whole, to foster and keep alive the sentiment so beautifully expressed, long years ago, by the homeless, home-loving John Howard Paine, in his immortal poem, "Home, sweet home; be it ever so humble, there's no place like home."

Some writers of fame put on paper this sentence which is often quoted: "Let us live with our children." Too many mothers as has been hinted, live for instead of with their children. You readily catch the distinction, which has so well been brought out by Mrs. Palmer.

Of course, we are compelled to be guided, if not governed, by circumstances, more or less, but that there should be found any such conditions in farm life, American farm life, as are told by "Eyewitness" is unbelievable. When knowledge of all sorts is so easily attainable in these days such a state of affairs as are

ROCKFORD heavier than standard SILVERWARE

The "Rosemary" pattern of Rockford silverware, comes from the name Rose of Mary meaning, "a remembrance" and is one of the real creations of the silversmith art.

You buy silver for years of daily usage. From the base metal up, Rockford Silverware is a product of absolute integrity. It represents an ideal in silvermaking.

Our ware is plated fifty per cent. heavier than other standard lines of silverware. For forty years the jeweler you trade with has been offering you our product. He knows the quality of our silver.

Interesting booklet on Silverware—free.

We have told in a booklet "Exclusive Silverware" the story of our product. It also pictures our goods. If you will give us the name of your dealer, we will gladly send the booklet to you—free.

here told us is simply criminal. Most counties nowadays have health officers and they should be notified of such occurrences as our correspondent writes about:

Careless or thoughtless watering of hogs causes untold loss, not alone among the future hogs, but also the human family as well. Several years ago water was scarce during the autumn months and a family, who were clean and good housekeepers otherwise, neglected to care properly for the animals. The father was sick with tuberculosis and finally died. All water used in bathing him, including the water used in bathing his corpse, was thrown into the swill barrel. Some of the hogs that drank that water were butchered at home for meat; some were kept for breeding purposes, and some were sold on the market to the packing house. Of course, the water that washed his dishes and the remains of his food went to this same swill barrel. Is it any wonder that when one such person in a family dies of consumption, other members of the family, and often in the community also, die of consumption?

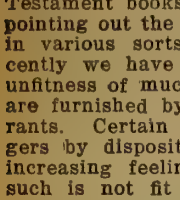
There is a lot of wisdom in the sanitary laws laid down in the Old Testament books. Modern science is pointing out the differences that exist in various sorts of foods. Just recently we have had a stir over the unfitness of much of the oysters that are furnished by the cheaper restaurants. Certain animals are scavengers by disposition and there is an increasing feeling that the flesh of such is not fit for human food. It is hardly possible to be over-scrupulous in choosing and preparing some things for food.

One of our housekeepers is getting things prepared beforehand for the annual spring campaign and has a request to make. She also contributes a method of making use of otherwise waste materials. Another good item for your scrap books:

Some time ago there appeared an article on preparing linseed oil with burnt umber or sienna for use on hardwood floors. Will the lady who sent this in please tell me how much to use and how it should be prepared. What do the sisters think is the best finish for a kitchen floor, where one must use same for dining room? There are many floor finishes that one can purchase, but they seem too expensive for general use. I am using old waists and dresses, the best parts of men's flannel shirts in making mattress pads. I cut the pieces the size of a post card and sew light and dark together. I used a comforter that had been used until it was faded and worn. I trimmed the sides off just the size I wished, then covered both sides with my woolen covering and tied it. I am so well pleased with it that I am making another. It is so warm. Such a good way to use old garments and also make use of faded quilts and comforters. This is my first attempt at writing to our Home Department. I enjoy the letters very much. The only fault I find is that there is not enough of it, for it is read all too soon. Then I look forward to the next issue.

You may have heard that we have the reputation of being a wasteful people, but when our housewives are as careful as Miss Rachel it would seem as though the blame would have to be laid at other doors. To be saving without being "niggardly" and to expend without being a spendthrift is an art worth much and constant study. In fact, a number of us put in much of our time and energy doing this very thing.

I hope you have kept our contest in mind and that your letter is on the way if not already in my hands. There is such a breadth to the subject that every woman who reads the department should contribute for the helping of others. I expect a huge mail.



THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

USEFUL HINTS.

Rub flatirons with fine salt to make them smooth.

To get rid of ants in a pantry, sprinkle red pepper in all crevices.

To prevent clothes from drying in streaks, rinse in salt water, not too strong.

To keep clothes from freezing on the line, put a little salt in the rinsing water.

In cooking tough fowls or meats, one tablespoonful of vinegar in the water will save nearly two hours boiling.

To make washing easier, soak the clothes half an hour in lukewarm soapsuds before rubbing.

Rub the hands with a piece of raw potato or a stalk of celery after peeling onions in order to remove the unpleasant odor.

A little lemon juice in plain water in an excellent tooth wash; it not only removes tartar, but sweetens the breath.—Arkansas Girl, age 15.

THE OLD FIREPLACE.

From its permanent spot the old fireplace
Smiles out on many a cheery face;
With its huge jamb rock and broad hearthstone,
And crackling wood, that doth howl and groan,
And long, broad mantelpiece overhead,
A ruddy light its flames over all doth spread.

And when the storm comes, with its snow and rain,
The old fireplace the cold will restrain,
And pour out its bright light over the wall,
And large, dark shadows creep and crawl,
Then every heart is light and gay,
And by our old homestead we long to stay.

And now, as I sit in my study tonight,
With my parents and brothers, so peaceful and quiet,
All circling around the old fireside,
Which we look upon with esteem and pride;
No hatred, no sadness, nor grief finds vent,
But there reigns joy and sweet content.
—Katheryn, age 16.

Earth, Air and Water— A Good Game.

One of the players is furnished with a handkerchief, which he throws suddenly and unexpectedly to another, crying out the name "earth," "air" or "water," which ever he likes and then counting as rapidly as he can. Before he has come to ten, the person at whom the handkerchief is thrown must name a creature that inhabits the element thus mentioned, or, failing to do this, pays a forfeit. Thus, suppose the thrower of the handkerchief says: "Water, one, two, three, four, five, six, seven, eight, nine, ten," the person challenged must call the name of some fish; if air, the name of a bird; or, if earth the name of some animal. If the question is put very abruptly and the numbers quickly counted, the players will often be unable to get out their replies quickly enough and the forfeits come in merrily. The best way is to look at one person, and then unexpectedly throw the handkerchief at another.—Buffalo Bill, Wisconsin.

The Last Muster.

The twins were up early on this particular morning, for something unusual was to happen to the twins and to the old soldiers around the village. It was the day on which the last muster of the soldiers was to be held and the old soldiers had looked forward with great joy to seeing their comrades. But I do not think the muster was looked forward to with more joy by anybody than by Roberta and Robert (usually called Rob and Bob) for they were going to do something which seemed very daring to them. Of course, nobody was to go to the meeting except the soldiers, but Rob and Bob were going to break the rule. At ten o'clock the twins walked down the street. "Bob, how are you going to get into that church, when all the soldiers are in there?" asked Rob. "Well, of all things," said Bob disgustedly, "I don't mean to get in there while they are there, I'm going in there right away." "Oh!" said Rob, "you are going in there and hide. May I go along?" "Well, I suppose you'll have to go, but I know you'll make a noise and they will find us out. All girls are alike," said Bob with dignity. At length they came to the old church where the meeting was to be held. They went up the steps and into the church. Here they walked very quietly for fear the faithful old janitor would hear them. Luckily he was busy at some work and did not hear them. "Bob, where are you going to hide?" whispered Rob. "Under that seat, there, see, where that funny little hole is. You get in first and then I'll get in," answered Bob. When the twins got in the hole they found it larger than they had thought it. They were very comfortably seated and enjoying the situation finely when the soldiers began to arrive. One by one they came until all were there. "Now they are going to begin," said Rob excitedly. "Keep still," answered Bob. The meeting was opened by singing "America." Then a speech followed which told how the soldiers were called to war and how some left their parents, others wives and children. All left friends. The way he told about the soldiers bravery and hardships which they went through seemed wonderful to the twins who were quietly listening under the seat to every word which was said. Then the man told how, during the whole war, friends at home looked for the return of their loved ones. Some returned well, some cripples and some not at all. Here there were signs of disturbance over the room and could the twins have looked up they would have seen eyes which were very misty. After this long speech the soldiers sang "Camping Tonight On The Old Camp Grounds." After this a speech was given about the number of soldiers which were now living and how they were cared for. In about the middle of this speech Rob whispered to Bob, "Bob, I have to sneeze, what shall I do?" "Roberta White, if you dare to sneeze I'll never, never—" but here Bob was interrupted from his awful threat by Rob sneezing. The twins were lucky for the soldiers were so interested in the speech that they never noticed Roberta's sneeze. After this speech which was not very interesting to the twins a man arose and gave a very touching speech on the friendliness and love that each member of the company had shown for each other. He also said that although this was the last muster he hoped that they would have the same love and not forget each other. If the twins could have looked up now they would have seen tears in many men's eyes and the others having a hard time keeping them back. When the soldiers clasped each other's hands and said "good-bye" it was a very touching sight and Bob, who despised to see anyone cry, could not keep the tears back. After the soldiers went the children got out of their hiding place and went out into the street. When they arrived home their mother ran out to met them saying, "Children, where have you been? I have been looking for you all over." "Oh, mother," said Rob, "we have been hearing the soldiers talk and they said some things that made Bob and me cry." "Rob, what are you talking about?" asked Bob, "I'd like to know when I cried? And anyway I thought we were not going to tell where we were. Well, I ought to have known better than to take a girl along. I never will again."—Vietta.

BIG AMUSEMENT PACKAGE--10 Cts.

Checker and Chess with men, Set Dominoes, Fox & Geese, 9 Men Morris, Authors—48 cards, 15 Cards—Love, Courtship, Marriage, 200 Riddles and Conundrums, 275 Select Autograph Album Verses, 15 Magic Tricks, 17 New Parlor Games, 12 Chemical Experiments, Language of Flowers, The Secret of Ventriloquism, How to Tell Fortunes, and a lot of other things to entertain the whole family all winter. Be sure to write and tell me her name today so I can send you my great free offer.

PEOPLES CO.
902 Popular Bldg., Des Moines, Iowa

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6108 Lady's Five-Gored Skirt.—One of the newest style skirts for separate wear or for costume or coat development is here offered. The garment is cut in sufficient width at bottom to make for grace and convenience in walking.

The pattern, No. 6108, is cut in sizes 22 to 30 inches bust measure. Medium size requires 3⅞ yards of 36-inch material or 3⅞ yards of 44-inch material. Price of pattern, ten cents.

6073 Miss' Suit.—A clever suit for the young girl is here shown. This suit is also designed for the small woman. The coat is double breasted and the skirt is cut in three gores. Good style is combined charmingly with a certain simplicity that makes the suit all the more attractive. The usual materials are employed.

The pattern, No. 6073, is cut in sizes 14, 16 and 18 years. Medium size will require 3½ yards of 54-inch material and ½ yard of 24-inch velvet. Price of pattern, 10 cents.

6036 Girl's Blouse Dress.—A pretty frock for the little girl is here shown. It is made in the popular blouse style and is very becoming to any small miss. The blouse is slipped on over the head and the kilt skirt is joined to an underwaist. The sailor collar and cuffs are fashioned of contrasting fabric with navy blue or red serge for the frock.

The pattern, No. 6036, is cut in sizes 6 to 12 years. Medium size will require 2⅞ yards of 36-inch material and 1 yard of 27-inch contrasting goods. Price of pattern, ten cents.

6038 Boy's Suit.—Navy blue serge was selected for the development of this style boy's suit. The blouse is made to be slipped on over the head, has applied yokes and may be made with or without the tucks. A patent leather belt holds it in place. The trousers are the usual bloomers finished with legbands or elastics.

The pattern, No. 6038, is cut in sizes 2, 4 and 6 years. Medium size requires 3¼ yards of 36-inch material. Price of pattern, ten cents.

5934 Lady's Waist.—This stylish waist closes at the left side of the front and choice of two styles of sleeve is offered. The garment has shoulder plaits at the back, also a yoke which extends over the shoulders at the front. Wide insertion bands may be used or the garment may have a frill at each side of the center front.

The pattern, No. 5934, is cut in sizes 32 to 42 inches bust measure. Medium size requires 2⅞ yards of 36-inch material. Price of pattern, ten cents.

Try this galvanized adjustable farm gate 60 days before buying it. No deposit, no payment until you say you want to buy the gate. Send for our Free Use Order Card and big Farm Gate Book. Address

FIRST QUARTER LESSON IX. GEN. XV. 1. 5-18 March 2, 1913

GOD'S COVENANT WITH ABRAHAM —THE STORY.

Nomadic life has always its own strong attraction. But the story of the migrations of this first of pilgrim fathers has a fascination peculiar to itself. Before the eye of imagination his caravan seems to pass. There goes the venerable shiek, clad in his crimson robe, wearing his silken turban with its fillet of rope. His "princess," in all her Oriental finery, rides beside him. There are the armed scouts on fleet horses; the noisy herdsmen, urging on the flocks and droves; the women and children, 1,000 souls and more; and the long train of beasts of burden, carrying the impedimenta of a great camp. Some time after Abraham's arrival in the Land of Promise it pleased God to arrest his journey by the outshining of the Shekinah and give him more explicit terms for the promise. There is a significant change of name ordered in the case of each party concerned in the convenant. The Deity himself condescends to follow the custom of man and at this juncture give himself a new and significant name; namely, El Shaddai—the All-sufficient God. Abram's name is changed from Exalted Father to Father of Nations, Abraham. Sarai, my princess, to Sarah, pricess universal. This change of name was a device of the eldest times, when means of intercommunication and record were scarce, to arrest attention and fix in memory important events and change of circumstance. By this means it was advertised to Abram's motly clan, and the surrounding tribes as well, that this aged sheik should miraculously beget a son by his own and venerable wife, from whom in turn should spring noisy masses and tumultuous nations. The pledge of this incredible circumstance was the new name of the Deity. He was "sufficient" for this thing. "I am the Almighty God." On that golden hook Abraham could hang his faith. And he did! He fell on his face, in that very act of adoring worship, appropriating the promise in all its fullness. In the injunctions, "Walk before me!" and "Be perfect!" there is gentle hint of the times when Abraham had failed to see the Invisible, and had stooped to ignoble devices to ward off imaginary dangers. This is no new convenant, but the happy assurance that Almighty God is rising to set in motion toward their blessed consummation the contents of the covenant, the first elements of which were given at least thirty years before in Ur of the Chaldees.

The Teacher's Lantern.

What a bugaboo "perfection" is to many people! Yet twenty centuries before Christ, God commanded Abraham to be perfect, and Jesus, with this very command apparently in mind, directs his disciples to be perfect even as their Father is perfect. El Shaddai should be the mystic tailsman, the broad phylactery bound upon our foreheads. God's almightiness ought to stir our feeble faith, make us realize the promises, however exceeding great they are. Saved from many a snare would we be if we only walked before the Lord, conscious that his eye was on us from above. "Thou, God, seest me." The Lord said, "Walk before me." The thought of a continued purpose inheres in the word—set thyself, be firmly purposed, thoroughly determined to obey before me. Truth is, literal and spiritual, run side by side in the history of God's favored people. Abraham is literally a father of nations—Arabia, Midian, Ammon, Moab, as well as Israel. But he is also the Spiritual Father of the nations that are now being born in a day by the preaching of the gospel. Kings are his offspring—David and Solomon, literally; all believers spiritually, who are made "kings unto God." His descendants are literally and phenomenally numerous, but his spiritual descendants are already numbered by the hundreds of millions.

WEDDING BELLS!!

"Let Them Ring for You at Waterloo"
—GALLOWAY

This is an offer to any young couple who is contemplating marriage. If you will come to the Galloway Agricultural Club in Waterloo and have the knot tied here, I will pay for the license, furnish the minister, flowers, music and a fine wedding dinner—all free! And listen—I'll also give the bride and groom a handsome present.

Let Me Entertain You

I want Farmers and their Families to visit me here at Waterloo. Come on over while you've got time for a vacation. I'll take care of you—free—at our splendid $60,000 Agricultural Club, planned and built for my Farmer Friends. Plenty to eat, music, good company—everything to make you enjoy life while here. Last week over 500 Farmers visited my big chain of factories. Many of them bought Engines, Spreaders, Cream Separators, etc., at a big saving, direct at factory prices. No obligation to buy, though. Just come and spend a day or a week, if you like, as my guest. I'll give you the time of your life.

Special 5% Discount!

If you cut out this "Ad" and bring it with you, I will give you a special 5% discount on your purchases while here. This will help pay your railroad fare. And remember, your expenses are paid while in Waterloo.

YOUR OPPORTUNITY
is NOW in the Province of
SASKATCHEWAN
Western Canada

Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

SOUTHERN MINNESOTA LAND BARGAINS.

I HAVE a finely improved farm of 280 acres, two miles from good town, only 18 miles north of Iowa line, at $85.00 per acre. $2,500 cash will handle this fine farm—and it certainly is a fine one. Also have a fine farm of 320 acres at $70 per acre, and one of 400 acres at $75.00 per acre. Any one of these are worthy of your consideration.

11 sections of selected prairie land in Lincoln county, Colorado, at $9.50 per acre. This tract will make a fine colonization proposition.

18 sections in Billings county, North Dakota, in a very fine stock ranch with good buildings. Northern Pacific Railroad runs through the land. Will sell at $5.00 per acre. Small cash payment. Balance to suit at 6%. The coal alone on this land is worth many times more than the sale price of ranch.

In Wisconsin I have some very fine cut-over lands that are suitable for dairying. Finest water in the world. Greatest tame grass country in the United States. Lands are near markets and will sell at $7.50 to $10.00 per acre, upon your own terms. A small cash payment will secure you one of these tracts. Write for information concerning any locality you may be interested in. **Geo. R. Slocum,** 601 Pioneer Building, St. Paul, Minnesota.

NEW LAND NEW TOWNS

1,000,000 acres] of land in five northwestern counties of Oklahoma have remained undeveloped because the nearest railroad was 10 to 35 miles away. The new extension between Joplin, Mo., and Muskogee, Okla., of the Missouri, Oklahoma & Gulf Ry., is now completed and opportunities are here offered to those who are quick to take hold and secure business property and farming land.

The M. O. & G. Ry. has no land to sell but will cheerfully answer all letters of inquiry with the view of giving out reliable information to all who make inquiry. Address H. L. Traber, General Passenger Agent, M. O. & G. Ry., Muskogee, Oklahoma.

MINNESOTA

KITTSON and Roseau Co..open lands;a few groves for shelter,good graded roads and cement bridges and drainage ditches; perfect system, a gift by the state to the lands, a gift to you who buy the lands; a small balance payable with the tax for a few years. See sample of soil and grain in our office; clay subsoil. Price $15.00 to $50.00. Choice unimproved $25.00 to $35.00. Don't stop to write. Come to see us and let us show samples and explain the drainage; better than Illinois tiled lands. Also our special contract, something new and good for you. Don't rely on letters and pictures but come and see. **W. H. STELLMACHER, 407-409 Clapp Block, Des Moines, Iowa.**

BREEDER'S LAND BARGAIN

HAVE 1,300 cut-over timber land with considerable timber standing. Located in Hubbard Co., Minn., 4½ miles from 2 good towns. Very good soil, highly productive. Specially adapted to farmer who combines live stock with grain farming. Investigate, and I will show this to be one of the biggest snaps in the country. Must sell. Address

M. L. TANKEL

573 Seventh Avenue No., Minneapolis, Minnesota, for prices and further particulars.

MISSISSIPPI

FOR SALE—3,555 acres of good hill cotton land, now in successful operation; well supplied with good negro labor. The plantation lies between two branches of the Illinois Central R. R.; nearest shipping point 4 miles from the dwelling. The land corners within ¼ mile of the shipping point. A sufficiency of cabins for tenants, stables, cribs, cotton bins, and all outhouses;36 head of mules and horses, cows, farming implements and feed stuffs. Price very low; terms good. Address **A. C. LEIGH, Grenada, Mississippi,** bona fide owner.

CLARK COUNTY, WISCONSIN

VIRGIN land, easily cleared, good soil, healthful, climate, adequte rainfall; roads, churches and schools, creameries and markets; all conveniences of a well-settled, prosperous community.

$18 PER ACRE

On terms to suit you. Monthly payments of $12.50 if desired. Special bargains for those who buy before spring. Write for full particulars to

WEST-CANNON-BISSELL COMPANY,
97 Wisconsin St., Dept. H, Milwaukee Wis.

A FARMER'S STATEMENT Hon. Edward Nordman, a farmer in Upper Wisconsin, says that he can keep a dairy cow per acre,and that he makes $3,000 per acre from 60 acres of improved land. About cheap upper Wisconsin land, write, Wisconsin Advancement Association, 331 Caswell Block, Milwaukee, Wisconsin.

MINNESOTA has a home for you. Good land at low prices. Literature giving information about soil, climate, price of land, etc., sent free on application to H. J. Maxfield, Commissioner of Immigration, Room 208, State Capitol, St. Paul, Minn.

ENGRAVING Half tones made from pictures or drawings of stock, for your letter heads, post cards, catalog advertising. Quick service, best work, reasonable prices. Write for information. Address

HOMESTEAD COMPANY
Engraving Dept. Des Moines, Iowa.

SILOS ON THE STAKED PLAINS.

A new Southwest is in the process of making. According to cattlemen the silo promises to transform the cattle industry in the great plains states and make them producers of fat cattle, instead of raising thin cattle to be fattened in the corn belt.

Cattlemen at the stock yards say that in the past ten years the country to the west and southwest of Kansas City has produced about 65 per cent of the cattle that have been fattened in feed lots east of the Missouri River. This region is preparing now to fatten its own cattle according to the Kansas City Star.

R. E. Cable, of Amarillo, Tex., marketed in Kansas City cows fattened on silage. They sold at $6.50 a hundred pounds, the highest price he ever received for cows.

"All over Patten county, where I live," said Mr. Cable, "silos are looming up, and before the close of the present year hundreds of more will have been built. This means that we will fatten our cattle for market instead of selling them to corn-belt feeders as formerly. We can produce plenty of kafir, milo maize, cane and other rough feed to fill the silos, and with cottonseed by-products and grain to be had, Texas in a few years will produce more fat cattle than any other state. In former years the lack of low priced rough feed in winter made cattle feeding impracticable, but now the silo solves that problem."

The King ranch, in southern Texas is installing forty-five silos, with a total capacity of 5,000 tons. On the "J. A." ranch, near Paloduro, Tex., a large number will be built. The "S. M. S." ranch, near Stamford, Tex., has several silos. Travelers from Kansas City to Amarillo, Tex., say that one never loses sight of silos on the trip.

Some of the commission men at the stock yards believes that the knowledge of this development is the chief reason why the new owners of the stock yards invested here. They believe that it will result ultimately in putting Kansas City ahead of Chicago as a market for fat cattle.

With the southwest ranchmen fattening the cattle they raise, instead of shipping them to the corn belt to be finished, it will become necessary for farmers in the corn belt to raise cattle more extensively, or else go out of the feeding business.

A GOOD RECORD IN HOG FEEDING.

To the Editor of The Homestead:

I would like to submit for the perusal of your readers my records for the last year in handling hogs and I would very much like to hear through your columns from those who are able to make a better showing.

Capital invested, seven sows at $20, $140.

Capital invested, one male hog, $10,

These sows farrowed forty-nine head of pigs, two of them being three years old and five one year old. Sold $514.70 worth of young pigs in the market. In addition I received $72 for two old sows; $56 for four brood sows sold to farmer; $15 for one male sold to farmer; $40 for three hogs for home meat and $2.30 for pigs given to minister, making a total of $700.

COST OF FEEDING.

Pasture	$ 10.00
Three acres of corn and rape hogged down	45.00
Two acres of cowpeas	15.00
Twelve acres of husked corn, forty bushels at forty cents	192.00
Shorts and oil meal	20.00
Rental for seventeen acres at $5	85.00
	$367.00
Twelve acres stalks at $1 per acre	$ 12.00
Eight tons of fertilizer	8.00
	$ 20.00
	$347.00

Subtracting $347 from $700 leaves $353.

$353 represents hog fat profit.
$347 represents feed.

Fed 700 bushels of corn and shorts and sold $700 worth of pork, or received $1 per bushel for corn at home. Have thirty-two pigs one month old from these same sows, this record being made in less than one year. Does it pay to raise hogs on $150 land? It is a trade, not a happenso. F. E. Morrell.

Linn county, Iowa.

LOW FARES to CANADA

Settlers! Go to Canada via the Duluth-Ft. Frances Gateway or via St. Paul and Winnipeg, over the **Canadian Northern Railway.** Even if you have already selected your farm you have the advantage of traveling from 1550 to 2500 miles through Canada's richest farming country. Tickets on sale **every Tuesday** March 11 to April 29, 1913.

Just glance over these low rates—second-class, one-way fares for settlers. Tickets good for stop-over privileges.

CANADIAN NORTHERN

CANADIAN NORTHERN RAILWAY

The MUSSELSHELL VALLEY
Eastern Montana

This rich agricultural district, 150 miles long and 20 miles wide, has been opened to the markets of the world by the new Chicago, Milwaukee & Puget Sound Railway.

Lands near the railway are rapidly being taken up and there are now 22 thriving towns within the valley.

Land prices are yet low with a steady upward tendency as the country develops. Land taken this year will increase in value with every new settler.

Good deeded lands sell from $15 to $25 per acre. Title to 160-acre homesteads can be had at the end of 14 months residence and upon payment of $1.25 per acre.

This land produces large yields of wheat, oats, barley and flax. Rye and alfalfa are also successfully grown on the bench lands.

Investigate Now

September and October are the best months to visit this wonderful country, see the land and yields and learn first hand of the opportunities it offers to energetic men with limited capital. Low round trip fares are in effect on the first and third Tuesdays of every month via the

FARM FOR SALE

SIXTY acres four and one-half miles from Springfield, Missouri. The land is on grood gravel road, rural telephone, rural free delivery, school and church one-half mile, splendid well of water and one pond for stock.

On the place is a good seven-room house, thoroughly overhauled recently, painted inside and out. New barn 24x30 with cattle shed at the side of barn 10x30. The barn is also painted. There is also smoke house, corn crib and store room. There is about four acres of timber on the place, principally oak. The whole sixty acres is in blue grass, timothy and clover. A good part of the place is in apple trees, but the land is all tillable. All the farms and buildings in the vicinity and in fact on the road from the city to where this land is situated and for miles beyond are all highly improved.

This would make a splendid home for some one who does not want to work a large farm and also a splendid investment, as the city of Springfield is rapidly growing, on account of it being headquarters for the shops and offices of the great Frisco railway system.

The reason for selling is that the owner is engaged in other lines of business and cannot give the place the attention it should have. Will be sold at a bargain if bought at once. Address

W. B. ROBINSON
628 Washington St. WATERLOO, IOWA

DEATH of owner forces this money-making farm at a sacrifice. 100 acres. Nearly level, rich land. Ten acres wood and timber. Ten-room house, 3 barns—32x45, 26x40, 20x30, hog house, henhouse, granary, wood house, plenty water, abundance fruit, R. F. D. and phone; three miles to railroad town. $2,000 gets it. $1,000 cash. Balance time. Hall's Farm Agency, Owego, Tioga county, New York.

AUCTIONEERS

LET us sell your farm and other real estate at auction. We are making successful sales for others. CAREY M. JONES & CO., Auctioneers, 2856 Washington Blvd., Chicago, Illinois.

WRITE OWNERS Half section farm No. 1 land and improvements. Corn belt. Close to school and town. Estate sold at a bargain. Small payment down. S. A. Trageser, Gary, Deuel County, South Dakota.

FOR SALE—Missouri farm, 443 acres, two miles from Palmyra, Missouri. Write to owner, Geo. J. Thurwachter, Palmyra, Missouri.

Keeping the Acre Busy.

I HAVE been impressed for a long time with the fact that the work that is being done by the experiment stations and the colleges of agriculture is attended with some dangers in this respect: We appoint in the college of agriculture a number of specialists—men who devote their time to the study of corn, or hogs, or cattle, or apples, etc., and each of these men investigating his particular problem comes to feel that his subject is about the most important one ever investigated by man up to this present century. There is a danger that the farmer himself may lose to some extent the proper attitude in reference to the relation of things, and it is therefore most important that we should understand the fundamental principles which should govern a series of farm enterprises for a consecutive period. I can understand how it is possible for a man to produce the finest corn and get the silver cup at the corn show, and perhaps win all the prizes at the National Corn Show, and yet be an unsuccessful farmer from a money-making point of view. I can understand how it is possible for a man to produce the finest beef cattle or the finest sheep or the finest horses and yet be an unsuccessful farmer, and therefore it seems to me that we should look upon these various intensive plans of agricultural betterment in relation to their effect upon a successful agriculture.

Now, as I have examined the various facts and investigations relating to agriculture in the past twenty years, I have become more and more convinced that of all the fundamental things with which we have to deal in the cultivation of the soil the most fundamental thing of all is the productiveness of the acre of land. It does not matter whether you are a beef cattle farmer or a dairy farmer or a grain farmer or any other kind of a farmer—the fundamental essential to your successful agricultural enterprises is the productiveness of the acre of land. Now, unfortunately, the systems of agriculture which we have practiced during the past 100 years have practically neglected the consideration of that fundamental thing. We have found here land of reasonable fertility, and we have treated it precisely as the coal miner or the copper miner has treated his mine, and we have contracted from the soil year after year the stored fertility in that soil until in many cases agriculture has come to be unprofitable, not because a man does not know how to grow good corn, not because a man does not know how to produce good cattle, but because the labor and expense devoted to an acre of land has become equal to or greater than the income from that acre of land. There is no business known to me where the fixed charges of production are so nearly uniform as in agriculture. Suppose we assume, for the purpose of this illustration, that it requires about twenty bushels of corn to pay the fixed charges; that is, it costs just as much to plow an acre of poor land as it does to plow an acre of good land, it costs just as much to harrow it, just as much to plant it, just as much for the seed and just as much to cultivate an acre of corn that produces twenty bushels per acre as an acre of corn that produces sixty bushels. And yet what is the relative profit? If we are cultivating land that yields twenty bushels per acre we are absolutely standing still; we are getting good wages for the time we are putting in, and the man who is farming that kind of land and getting that kind of a crop, rather than continue in that way, would be better off on his own account and the state would be better off if he would sit in the shade and smoke his pipe instead of robbing the soil still further of what little fertility it has.

Now suppose that we had an acre of land that produced twenty-five bushels per acre. In that case the charges are practically the same, but we have five bushels profit at fifty cents per bushel, or $2.50 on the acre. But suppose we had land that would produce sixty bushels of corn; in that case the charges are practically the same. It will take twenty of the sixty bushels to pay these fixed charges, and we have a profit of approximately forty bushels per acre. I grant that it will cost a little more to harvest sixty bushels than twenty-five bushels, but in substance my comparisons are sufficiently accurate for my purpose. Forty bushels profit at fifty cents a bushel amounts to $20 profit. Now, twenty-five bushel land as compared with sixty-bushel land is as $2.50 profit is to $20 profit; that is, about eight times as much profit from land that produces sixty bushels to the acre as from land that produces twenty-five bushels to the acre. Now, is it true that a man had better own one acre of land that produces sixty bushels of corn under average conditions than to own eight acres of land that produces twenty-five bushels per acre? That's an economic problem that will pay us to think about carefully. The longer you live and the more you think about it the nearer you will come to admitting that it is better to own one acre of land that produces sixty bushels of corn per acre than to own eight acres producing twenty-five bushels per acre. Now what are the farmers going to do who have twenty-five bushels to the-acre land? That's the big problem of Missouri, Iowa, Illinois, Kansas and of every other state. The average yield of corn is around thirty bushels to the acre in all these states I have mentioned.—[F. B. Mumford in Missouri Report.

FEDERAL AID FOR ROADS.

The widespread demand for national road building has awakened great interest in congress. Sen. Jonathan Bourne, Jr., of Oregon, chairman of the joint congressional committee on federal aid for highways, published recently a series of questions relating to the need of the proposed federal appropriations. A letter stating the position of the advocates of national good roads, has been written by Judge J. M. Love, of Kansas City, president of the National Old Trails Road Association. The letter was designed especially as an answer to Senator Bourne's question. It follows in part:

There is much confusion of thought on the road question. So-called "federal aid"—a misleading phrase—is responsible for much of this confusion. It ought to find no place in road literature. The states need no "aid" from the general government or from any other source in building their own highways. The state does not decide what roads are national. This is a function of congress alone. No question of state rights is involved, as was clearly maintained by John C. Calhoun when this question arose in legislating for the Cumberland Road.

Let Congress exercise its undoubted authority, either directly or through a commission or bureau of highways, to decide what roads are national, and take over such roads for improvement and maintenance by the government. In this way no conflict of authority can occur, no divided responsibility, no question of supremacy, no proposition of mutual "aid."

What an impracticable scheme it would be to divide the waters of a navigable stream between the states through which such stream may flow and subject it to a divided control and supervision. It would, however, be no more impracticable than to divide a national highway in such a manner.

Twenty million dollars will build any national trans-continental road in contemplation. This amount should be appropriated annually until a vast system of national highways should read every part of the country. The states and counties should enlist and apply their energies and revenues to a system of lateral or local roads, intersecting the national roads.

This system, if adopted, will not require the levying of a single dollar of additional national taxation, will build at least one trans-continental highway annually, will add millions of dollars to property values and thus increase enormously the federal revenues and add to the sum of human welfare and well being beyond any other single activity of governmental endeavor.

One of the means of stimulating the live stock industry in Canada is that of furnishing of steers at cost to farmers' sons who will undertake to feed them, the profits on sale to be paid to the boys.

At the present time a pound of butter fat is worth more than a bushel of corn or oats. Is it any wonder that the dairyman is pleased with his work or that the silo is gaining in favor?

LOUDEN'S LABOR SAVING LITTER CARRIER

Tickles the Boy *because it makes a man of him*—**enables him** *to do a man's work with ease.*

You clean your barn with half the effort in half the time. The

LOUDEN CARRIER

makes this heavy job fun for the boy. Curves and switches take the carrier to any part of the barn. The cost is small. It's a money making investment in any size stable. Send for Catalogs. Ask your dealer about the LOUDEN CARRIER.

BARN PLANS FREE

If you expect to rebuild or remodel a barn our Architectura Department will work your ideas into a real plan without cost or obligation to you. Tell us the number and kind of stock you wish to stable and give other information. We may be able to save you a good many dollars.

We manufacture every equipment for Dairy, Horse and Hog barns, and hay unloading tools.

THE MARKETS.

Union Stock Yards, Chicago, Ill., February 21st.—Considering supply figures, the beef steer market has done a very creditable stunt this week. Chicago's receipts will reach nearly 51,000, or about 12,000 more than the week previous, while there has been an aggregate increase of 20,000 at six leading western markets over either last week or a year ago, yet everything in the steer line has cleared with reasonable celerity, with closing prices on most grades of beef steers about steady with the close last week, giving current values a legitimate appearance, as this trading basis is shown despite weather of the consumption repressing brand. The market is undoubtedly on a much more substantial basis than it was some three weeks back and the trade now realizes that low spot for the season was uncovered at that time. Feeders who a few months ago were clamorous for an invitation from their commission houses to load are now viewing the prospects complacently, as if confident that the process of putting on a little more weight would be profitable. February does not bear an enviable reputation in its relation to the cattle market, especially where fat cattle are concerned, and the improved trade conditions since the month's opening have therefore been more than was expected by many. Prime weighty steers are scarce and subject to very little fluctuation in value at this time, although killers are demonstrating their ability to get alone with very few heavy bullocks, good, bad or indifferent. Retailers want light carcasses and consumers small steaks and roasts. In trade circles an opinion exists that weighty cattle will be handicapped right along. Feed abundance always has had the result of furnishing plenty of heavy beef late in the winter. Killers are now getting few decent steers of any weight below $8, and the upturn within the last fortnight has resulted in a broad trade at $8.25 to $8.65. While this week's top was only $9, a really prime drove of bullocks would doubtless have been eligible to $9.25. The bad spot in the Lenten season in the cattle trade is invariably the week before Holy Week, which this year ends March 22d. Country shippers will doubtless profit by keeping this in mind.

Stock and feeding cattle trade is not waiting for the arrival of the grazing season to do the pyrotechnical stunt that had been predicted for it. For the past three weeks the trend of values, already high, has been steadily upward and thin and fleshy feeding steers of all weights are now not only selling at the highest prices on record, but selling to a hungry demand at the high altitude which they have attained and which they promise to hold for sometime ahead. It is a remarkable trade, an outstanding feature of which, in addition to its volume at the prices, is the narrow spread that exists between decent, thin, young stockers and fleshy, strong-weight feeders. Prices range from 10 to 25 cents higher than a week ago and quality, rather than age or weight, determines the selling price. While prices look dangerously high, there is much in the outlook, if statistics are worth anything, to warrant the belief that purchasers of thin young cattle at current lofty rates are by no means bereft of reason. From both the cattle feeders' and the consumers' standpoint, the beef cattle situation is alarming. With a total cattle supply in this country estimated by the government at 36,000,000 head, other than milk cows, against better than 50,000,000 twelve years ago, accompanied by a 20,000,000 increase in population in the United States, the country full of feed of all kinds, much of which must either be fed or wasted, and the grazing season close at hand, there is much reason for the belief that the present $7.40 to $7.85 market for the bulk of the good 600 to 900-pound thin steers and the $8 to $8.35 trades that have been recorded this week in selected yearlings and fleshy feeders of fancy class are warranted. Stock steers now selling at $7 to $7.25 are light and very ordinary in quality and it is not taking much of a bunch of feeding heifers to sell around $6.

Prices on butcher stock have been undergoing a readjustment process this week, the increase in supply giving buyers opportunity to work the hoof cost of cows, heifers and bulls down to a point nearer in line with steers, killers having contended for sometime past, and their stand has not been subject to criticism, that butcher and canning stock was relatively too high. Ten to 15-cent declines from a week ago are shown by medium to good cows and heifers, canners are about 10 cents lower and bulls have had a 25 to 30-cent decline from that high time when any good, strong-weight bologna bull was worth $6.15 to $6.25 on this market. Calves are holding firm prices, moderate receipts and some outside shipping orders stiffening the demand.

Cattle quotations at Chicago at the close of this week's business follow:

BEEF STEERS.

Prime steers, 1,350-1,700 lbs.	$9.00@9.25
Choice steers, 1,250-1,500 lbs.	8.75@9.00
Choice steers, 1,100-1,240 lbs.	8.60@8.80
Good to prime yearlings	8.25@8.70
Medium to good yearlings	7.75@8.20
Common to fair yearlings	7.00@7.60
Good steers, 1,100-1,400 lbs.	7.75@8.40
Good steers, 900-1,200 lbs.	7.75@8.00
Fair steers, 900-1,200 lbs.	7.50@7.75
Medium steers, 850-950 lbs.	7.25@7.50
Inferior steers, 850-950 lbs.	6.85@7.25
Common steers, 800-850 lbs.	6.50@6.75

FEEDERS.

Selected, 900-1,150 lbs.	$7.75@8.15
Fair to good, 700-900 lbs.	7.20@7.60
Plain to good light	6.50@7.10
Feeding heifers, poor to good	5.35@6.10

STOCKERS.

Selected, 500-700 lbs.	$7.40@7.90
Good straight lots	6.90@7.25
Fair plain lots, 500-600 lbs.	6.40@8.85
Common to plain mixed	6.00@6.35
Heifers, common to good	5.00@5.75

BEEF COWS.

Choice to prime fed cows	$6.40@7.15
Good to choice cows	5.75@6.35
Fair to good cows	5.10@5.70
Common butcher cows	4.40@5.00

CANNERS AND CUTTERS.

Good to ch. heavy cutters	$4.25@4.40
Fair to good light cutters	4.10@4.20
Fair to good canners	3.80@4.05
Poor to fair canners	3.50@3.75
Old, thin, weak shells	3.10@3.40

HEIFERS.

Choice to prime heifers	$7.10@7.85
Good to choice fed heifers	6.60@7.00
Fair to good heifers	6.00@6.50
Common to fair heifers	4.75@5.75

BULLS.

Good to choice bolognas	$5.90@6.00
Light and medium bolognas	5.60@5.85
Canner and poor light	4.25@5.00
Good to choice butchers	6.00@6.25
Choice to fancy beef	6.35@7.00

VEAL CALVES.

Good to choice vealers	$9.75@10.35
Fair to good light vealers	8.75@ 9.60
Strong weight vealers	7.25@ 8.75
Good to ch. stock calves	6.50@ 7.25
Inferior to fair hvy. calves	4.50@ 6.00

Further proof that the recent sharp upturn in hog values was legitimate has been on top this week. At the close of last week the general average price at Chicago stood $1.10 above the low spot of the winter, hit on December 18th, when the average cost of Chicago droves dropped to $7.12. Yet no time within the last few weeks of an awaiting price list has the healthy condition of trade jarred loose more than a fair weekly run of hogs from feeders' hands. Six western markets received but 362,000 during the first five days this week, or 15,000 less than like period of the week previous and 43,000 less than a year ago. Today's trade closed strong with an $8.50 top on prime lights and the bulk of the supply selling at $8.30 to $8.40, or 15 to 20 cents higher than a week ago. Since January 1st there has been a decrease of 758,000 hogs as compared with the corresponding time last year in the aggregate marketing at six leading western points. This shortage, costly beef and the further fact that the public is not getting access to unlimited quantities of cheap mutton as was the case a year ago, seems abundant reason for the present high hog market and anyone laboring under the impression that hogs are going to sell much cheaper soon has another think coming. Patrick Cudahy, the packer, was a Chicago visitor this week and gave utterance to the following bullish prediction:

"I think that there never was such a shortage in the meat supply in the history of the world as exists at the present time. Anybody who can figure in pounds the shortage indicated by the government report of last month will find that the shortage runs up to one billion and two hundred odd millions of pounds.

"I believe that hogs will sell at $9 or higher in April. Most of the hog shippers from the country whom I talk with now and then say that next summer is when we will feel the real shortage of hogs. The provision situation looks stronger every day. We are just finishing the four big packing months, which are generally months of light trade, yet we have accumulated little or nothing in the way of product. We are now just finishing the four big packing months, which are generally months of light trade, yet we have accumulated little or nothing in the way of product. We are now just at the beginning of three months when receipts of hogs are generally light and trade big. It is the beginning of the cotton-planting season, and when the colored man works he must have his pork."

Today's Chicago hog quotations follow:

Bulk of sales	$8.30@8.40
Mixed, 215-250 lbs.	8.20@8.32
Mixed, 170-200 lbs.	8.30@8.37½
Medium weights	8.30@8.37½
Light butchers	8.35@8.45
Heavy butchers	8.35@8.40
Light shipping	8.40@8.50
Heavy shipping	8.35@8.40
Heavy packing	8.10@8.30
Rough heavy packing	7.90@8.10
Throwout packing sows	7.35@7.85
Fair to choice light	8.25@8.40
Light-light, 135-165 lbs.	8.20@8.40
Pigs, good to fancy	7.40@8.25
Pigs, inferior to fair	6.50@7.55
Boars, poor to good	3.25@4.50
Stags, subject to dockage	8.35@8.75
Government throwouts	4.50@6.25

Matured muttons have advanced 15 to 25 cents this week, while fat lambs have declined 25 to 35 cents, with many heavy lambs selling 50 cents lower, thus materially lessening the gap between sheep and lamb values. This narrowing of the spread has made good abundant prediction and many in the trade express the belief that the two classes are scheduled to sell still closer together.

Colorado is running lambs freely, as if desirous of taking current prices and shutting off the feed bill, and expectancy is for a big March run from that source, but corn-belt feed lots, outside of western Nebraska, have been all but exhausted, and Buffalo and other eastern markets will be bare right along, forcing butchers down that way to come West for their supplies. It is probable that the lamb trade will be choppy the rest of the winter and during the early spring, as it has been thus far this year, but that prices will continue on a remunerative basis to feeders there is little room to doubt. Aged sheep are now selling higher than at any time since last May, with sales of prime fed western wethers and ewes as high as $6.75 and $6.40, respectively, here late this week; but best lambs are now 65 cents below the January high spot and heavy lambs, which are meeting strong discrimination, are nearly $1 per hundredweight below the season's best levels. Quotations:

Lambs, good to prime handy	$8.50@8.85
Lambs, good to prime heavy	7.50@8.50
Lambs, fair to good natives	8.25@8.60
Lambs, common to fair	7.85@8.25
Lambs, culls	6.50@7.75
Wethers, good to prime	6.40@6.75
Yearlings, fair to ch. handy	7.25@8.00
Yearlings, fair to ch. heavy	6.75@7.50
Ewes, fair to best handy	5.60@6.25
Ewes, fair to prime heavy	5.65@6.15
Ewes, culls	4.00@4.50
Bucks	3.75@4.25
Lambs, feeders and shearers	7.50@8.35
Wethers, feeders	5.00@5.50
Yearling wethers, feeders	6.00@6.50

SOME THINGS THE YOUNG FARMER SHOULD KNOW.

Under the title "The Young Farmer —Some Things He Should Know," a volume has recently appeared from the pen of Dr. Thomas F. Hunt. Here is a book which every man, young or old, taking up farming as life work, will find an interesting, readable, practical guide covering the whole subject. The author, who is one of the safest and wisest counselors in this country on agricultural matters, is himself a farmer and has had wide experience with young men and farmers, obtained through his many years' association in college work. This new book was written for the young man, although it is fully as useful to farm people of all ages and will prove extremely valuable to those who read it. The following table of contents will indicate the nature of splendid suggestions and advice in pointing out the things the young farmer ought to know: Essentials of Success, Means of Acquiring Land, Farm Organization, Opportunities in Agriculture, Where to Locate, Size of Farm, Selection of Farm, The Farm Scheme, The Rotation of Crops, The Equipment, How to Estimate Profits, Grain and Hay Farming, The Cost of Farming Operations, The Place of Intensive Farming, Reasons for Animal Husbandry, Returns from Animals, Farm Labor, Shipping, Marketing, Laws Affecting Land and Labor, Rural Legislature, Rural Forces.

This paper is in a position to supply its readers with single copies of this volume at $1.50.

FIRST PRINCIPLES OF FEEDING FARM ANIMALS.

A comprehensive and well illustrated book on feeding farm animals by Prof. C. W. Burkett has recently come from the press. The book discusses the first principles of stock feeding. It is of simple construction, takes up the subject step by step, making it possible for the practical man or student to understand fully both the sciences and the practice of this important subject. The book is more than a statement of principles; it is an interpretation of the entire science of feeding. The stockman and farmer will find it as captivating as a novel and the teacher in school or college, the most teachable text they have to use on any subject. The following condensed table contents gives an idea of the scope and completeness of the work: The Soil, The Plant, The Animal, What Feeding Stuffs Contain, How Food is Digested, Using Feeds for Best Results, Composition of Animals, Food Nutrients, Some Scientific Terms in Feeding, Computation of Rations, Basing Standards on Quality of Milk, Computing Rations on the Basis of Starch Values, Using Energy Values for Computing Rations, Cost of the Ration, Cost of Nutrients, Feeding Young Animals, Feeding Breeding Animals, Feeding Farm Horses, Feeding Beef Cattle, Feeding Sheep, Feeding Swine, Feeding Farm Poultry, The Silo and Silage, The Soiling System, Relation of Food to Manure.

This paper is in a position to supply its readers with single copies of this volume at $1.50 each.

Where thick weeds and grass are allowed to cover the ground in the orchard, it will furnish the mice and other troublesome pests a fine harbor, thus increasing your orchard troubles and decreasing your profits.

KITSELMAN FENCE

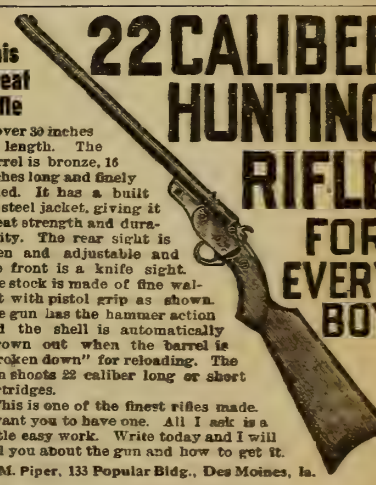
This Great Rifle

22 CALIBER HUNTING RIFLE FOR EVERY BOY



is over 30 inches in length. The barrel is bronze, 16 inches long and finely rifled. It has a built up steel jacket, giving it great strength and durability. The rear sight is open and adjustable and the front is a knife sight. The stock is made of fine walnut with pistol grip as shown. The gun has the hammer action and the shell is automatically thrown out when the barrel is "broken down" for reloading. The gun shoots 22 caliber long or short cartridges.

This is one of the finest rifles made. I want you to have one. All I ask is a little easy work. Write today and I will tell you about the gun and how to get it.

A. M. Piper, 133 Popular Bldg., Des Moines, Ia.

When writing to advertisers please mention The Homestead.

SAVE 25 TO 50% ON HARNESS $25.00 FREIGHT PREPAID

For $25.00 we offer our Leader No. 53—1½ inch Team Harness set down at your railroad station. This harness, designed and made for durability and service is the biggest bargain we have to offer. While the price is exceptionally low for a harness of this nature, quality has not been sacrificed on that account. But, "after quality, it's the price that counts." In the harness here illustrated only the very best grade of Oak Tanned Leather has been used in its manufacture and our money-back guarantee stands behind every sale.

We issue a 100-page, completely illustrated catalog, jammed full of just such bargains as shown in the illustration.

Just drop us a card and we will send you by return mail one of these handsome books. We manufacture all our own harness in our spacious factory at Waterloo. This alone accounts for the rock bottom prices we quote—no jobber, salesmen, agents or brokers to split up the profit—just the manufacturing cost with one small profit added. This accounts for the fact that we are absolutely the largest manufacturers of harness and leather goods, selling direct from factory to user.

A comparison of quality and prices will surprise you. Write today to

A MODEL LIVE STOCK FARM.

(Continued from page 3.)

production on this banner Illinois farm. A combination hay of cowpeas and millet is profitably grown at Gregory Farm. About forty acres of this combination roughage are cropped, the yield amounting to about three tons to the acre. The hay is of superior quality and is highly relished by all classes of live stock. It is particularly rich in protein, and constitutes an inexpensive source of this valuable feeding element. Small lots of rape, which aggregate about five acres, are raised for summer and fall hog pasture, while an additional ten acres of sorghum are also grown for feeding purposes. The home consumption of all this grain and roughage means that a veritable mine of fertility is maintained right on the place in the guise of the hundreds of head of live stock that are maintained in the permanent breeding herds.

Perhaps the average reader is not familiar with the fact that Mr. Corsa maintains a large herd of Jersey cows in addition to his other live stock operations. The milking herd rounds out the labor question to a nicety; that is to say, the time of the hired help is wholly utilized in profitable production with the dairy as an adjunct to the swine and horse-breeding operations. Two prepotent and well-typed, pure-bred Jersey bulls are kept in service on the farm, so that approximately forty head of young stock are sold each year. The cream of the heifers are kept on the farm in order to recruit the milking herd as the need arises, while the other young females and males are disposed of.

When Mr. Corsa sold Star Masterpiece, one of the best boars that ever lived, for $5,500, he created a furore in swine-breeding circles all over the world. Such a price for a "plain pig" seemed the height of folly and extravagance. However, subsequent results have demonstrated that this male was well worth the money. The Corsa "Berks" show a preponderance of Masterpiece blood. It is unnecessary to mention at length the excellence of this strain of outstanding merit. Anyone familiar with Berkshires in the United States knows that the Masterpiece families occupy the same position among the "stub noses" that the Vanderbilts hold among New York's "four hundred." It is also sufficient to say that all the Gregory Farm Berkshires are of corresponding type, quality and excellence. This is a farm on which none but the best survive. Each pig and mature animal is submitted to a Spartan-like test that features only the survival of the fittest. The "culls" are fattened and marketed.

The herd boars that are used at present in the Corsa herd include invincible Masterpiece, Fearnot Masterpiece, Rival's Emblem, Invincible Verdict and Superba's Masterpiece. Among the leading sows of great producing sons are Lee's Artful Belle 30th, Matchless Perfection, Duchess Robin Hood 2d and Longfellow's Duchess 3d. These animals are all champions of their kind which are unexcelled as fine specimens of the breed. As far as possible pigs are raised and the mature animals are maintained under absolutely natural conditions. Plenty of exercise and out-of-door life stand for hog godliness on the Gregory farm. By nature the swine are rustlers and foragers and if the breeder unduly restrains or confines the animals the earmarks of this bad management are sure to be indelibly impressed on the offspring.

A large central farrowing house is maintained which provides twelve large pens for the sows that are about to farrow and their subsequent litters. Sanitation rules supreme in this house. Mr. Corsa fights disease with cleanliness and sanitary precautions. "Control the germs by keeping the farm free of them," is the advice of Mr. Corsa to the hog farmer. Hog cholera is a stranger that never is known at the Gregory Farm. The practice of strictly sanitary management prevents this pestilent scourge from even establishing a speaking acquaintanceship with the Corsa Berkshires.

A noteworthy feature of the farrowing house is a small annex sun parlor which is twelve by four feet in floor dimension. The roof of this sun-bath slopes toward the South. Both the roof and southern side of the building are made of glass. In consequence the sunlight penetrates to every nook and cranny of the building and it furnishes an ideal place for the sow and her litter to bask in the sun even during the most severe days of winter. The house is equipped with a wooden floor on which there is a wooden overlay that can frequently be removed and cleaned. Such a house should prove of great value to the farmer who experiences difficulty in raising two crops of pigs a year on account of inclement climatic conditions. The structure is relatively inexpensive and it pays for itself times over in the lives of the pigs that it saves.

As soon as the pigs are old enough and the weather is fairly moderate each sow and her litter are removed to an individual portable house with an adjacent three-fourths-of-an-acre lot on the range. On the Gregory Farm the A-shaped portable house meets with small favor because it is so hard to keep the floors of such houses dry and warm during the winter season and also because little sunshine can penetrate to the interior of these shelters. When the hog lies down on the damp floor the animal heat of her body brings more moisture to the surface. After the pigs are weaned they are usually placed on clover or alfalfa pasture in lots of twenty-five or thirty animals. Breeding animals are sold at any time after they are 100 days old. The Gregory Farm sells about 300 breeding hogs a year. Mature sows bring from $150 to $300 while occasionally an exceptionally fine female will sell for $1,000. Duke Eunice was sold from the farm for $1,100.

The fat hogs are sold in small lots of from thirty to forty head at a time while they will range in weight from 150 to 350 pounds. During the summer the fattening porkers run on clover pasture in addition to being fed plenty of corn. In the winter the swine follow the dairy cattle and feed on corn fodder and ear corn. On Gregory Farm the fat hog crop is really a by-product of the pure-bred business. The brood sows run on clover, alfalfa and blue-grass pasture as long as it lasts. The swine are kept in the pink of healthy condition all the time. A slop feed of two parts of wheat middlings to one of ground corn is used to particular advantage in the hog ration. Skim milk is used only in weaning the pigs, as the farm provides only about one-half enough skim milk for this purpose.

"Kuhn California Project"

In the Sacramento Valley

The canal, drainage and road construction completed, these lands are now being sold in small subdivisions. The soil, a deep alluvial silt loam, the best in the valley.

RAILROAD PASSES THROUGH THE LAND

Towns, Schools and Churches Near At Hand

CROPS—All kinds of fruits (including oranges and lemons); vegetables, seeds, berries, alfalfa, cattle, hogs and chickens.

WATER SUPPLY—Unlimited. Water delivered to boundary of every 40 acre tract. Canal and drainage system perfect.

TRANSPORTATION—Both by rail and river to the great metropolitan centers.

LAND PRICES—Low, and terms of payment easy.

If you want to secure a home in California, where climate, soil and water combine to work for you overtime, fill in this advertisement, and mail to us for full particulars.

TEN YEARLY PAYMENTS

PRAIRIE ROCK FOR ROADS.

Common prairie rock, properly crushed, makes the best material for hard roads, says J. D. Clarkson, president of the 365-day road club at Carthage, Mo., an organization of business men and farmers which has built many miles of permanent roads in Jasper county.

"This may seem a little strange, coming from a district overflowing with mine gravel, considered by many to be the best road material," said Mr. Clarkson. "But our club has experimented with many materials and I speak from our experience. River gravel is also better than mine gravel. The flinty 'chats' which comes from the mines breaks up under travel like glass and pulverizes into dust. The prairie rock and river gravel pack into a smooth hard road and outwear the 'chats.'

"The most important of our club's equipment is a traction engine and a portable crusher. We find plenty of prairie rock along most of the country roads. Farmers are glad to have it removed from their fields and sometimes we use up a dilapidated stone fence. If a creek or river is near we mix river gravel with the crushed stone.

"We hear often of residents of other counties saying they could have good roads also if they had mining gravel convenient as has Jasper county. As a matter of fact, the land of those very counties probably abounds with prairie stone enough to turn every earth road they have into fine hard pikes."

The Carthage club was organized two years ago by business men who wanted more and better roads leading to Carthage. Five hundred members pay $5 a month each.

Concerning the work of the club, Mr. Clarkson says:

"The activities of the club may be illustrated notably in two instances. First, in a case where a few farmers desired to have a couple of mud holes filled and were in Carthage to get assistance. The club took hold of the propcsal and when they got through with it there were two miles of good road constructed. Another case where there had been many efforts in the last few years to build a stretch of six miles of road where it was badly needed, the club finally took a hand in the matter and by the appropriation of $500 toward the work constructed six miles of hard road.

"You will understand it just needed this little extra push to bring to fruition an enormous amount of labor that had already been done in the way of getting money, but without the assistance of the club it is probable that the road would not have been constructed so soon."

Iams and "models" of his "nifty," "big" imported "peaches and cream" Percheron and Belgian stallions and mares. Prices reduced on "business" and "show horses." All have been "inspected" by U. S. A. veterinary and certificates "stamped" O. K. by government of U. S. A. Iams gives certificate of soundness with each horse. See Iams and save $1,000 and buy a "hummer." He has many Paris and European prize winners. Iams sells "toppers" at $1,000 and $1,500.

Brood Sow Management.

By John M. Evvard, Iowa Experiment Station.

TO PRODUCE strong, healthy litters is not only necessary that the sows be fed correctly upon feeds that furnish sufficient muscle, bone and energy-making materials, but that they be handled wisely during the period of gestation.

The mother sow needs food for three important purposes; first, for her own maintenance; second, for growth on her own body; and third, for the nourishment of the fetal pigs. Corn lacks muscle and bone formers and in addition is too concentrated (not bulky enough for breeding swine). Tankage, meat meal, linseed oil meal, skim milk, buttermilk, bran, oats, middlings, shorts, soy beans, clover and alfalfa are the logical supplements to corn in the middle west. At the Iowa Station we have found that most excellent rations for gilts carrying litters are:

1. Corn 88 to 90 per cent, meat meal or tankage containing 60 per cent protein, 10 or 12 per cent.
2. Corn 75 per cent, finely cut clover or alfalfa 25 per cent.
3. Corn 80 per cent, oats, chopper clover or alfalfa 10 per cent, meat meal or tankage 10 per cent.

For old sows the proportion of meat meal or tankage can be cut down practically one-third to two-fifths and still get excellent results.

Stronger, healthier litters having more hair, more color and more bone have been the result whenever we added a suitable protein and ash supplement to corn. When we selected our supplements wisely we also got cheaper pigs. At present prices for purchased protein and ash supplements, meat meal and tankage are our cheapest sources.

Above all things, excepting the food supply only, and abundance of exercise is most important. All classes of pregnant animals do well only when abundant exercise is allowed. The general tone and vigor of the mother is reflected in the offspring; the better the general health and condition of the dam the stronger and more vigorous the young. Range on pasture is perhaps the best of all. Allow the sows to follow cattle for awhile, but be sure to remove them when they tend to become clumsy and heavy. Scatter the feed over the ground, such as sheaf oats, soy bean hay, etc., and let the sows gather it. Feed on the side of the field opposite the sleeping bunks. Allow hay in racks, the eating at which is conducive to light exercise. Shut the sows from the houses in the middle of the day rather than allow them to huddle up and snooze peaceably. Schemes to induce exercise cost little, yet the returns are considerable.

Warmth, dryness, ventilation and sunlight are the essentials of an ideal hog house. Such conducive conditions can be secured with a little forethought. Good dry bedding is needed and to be kept dry must be changed regularly. Arrange the houses so as to avoid drafts and heavy winds, preferably placing them in sheltered nooks. Although the hog can stand considerable cold, yet the breeding hog does not have the fat which would ordinarily keep the fat hog warm, neither does the breeding sow have such a warm coat as the horse, for instance, that roughs it. We have found in our experience that sensible shelter saves many cents.

We hog men cannot afford to feed our hard-earned corn and other grains to lice and worms. Crude oil is cheap, costs not more than $4.00 a barrel, is easily applied and does the lice up brown and black, hence why hesitate. It kills the nits on application and can be used in winter because it is an oil and does not evaporate. An old broom, a sprinkling can and a couple of hurdles handled by two active men is sufficient equipment for ridding the farm of hog lice.

Worms are serious drawbacks. I know of no better remedy than Santonin six grains, calomel four grains, to a hundred pounds of hog given once on an empty (twelve hours off feed) stomach and repeated in ten days, if necessary. It is not well to use any worm medicine upon sows within a couple of months of farrow, because all pregnant animals in advanced stages have some tendency to abort when given a strong laxative. The thing to do is to tend to the worms in time.

Laxativeness of the bowels is highly desirable as costiveness is a menace. Plenty of exercise combined with laxative feeds such as tankage, oil meal, bran, alfalfa, hay, etc., will largely solve the problem. However, if it does not, a week before farrowing an emergency remedy of an ounce of epsom salts per hundred pounds of hog will help considerably.

The essentials of brood sow management may be briefly summarized; Provide suitable food, but do not overfeed. Emphasize the protein and ash constituents. Keep the sow growing nicely, but do not fatten. Devise schemes to induce exercise. A dry, warm, well-ventilated bed in a sheltered house is in order. Kill off the lice and drive out the worms, because you cannot afford to feed parasites. Avoid constipation by natural feeding management, but resort to emergencies, if necessary. Practice gentleness with your brood sows, speak kindly in their presence, recalling always that good treatment bespeaks contentment with its corresponding

Barr & Rae's Chester White Sale.

A public sale of Chester Whites held at Ames, Iowa, by Barr & Rae on February 18th, was an unusually successful one and demonstrated that the breeders of Chester White hogs are fully as energetic in their pursuit of the best and fully as appreciative of quality as are those who are engaged in the production of animals of other breeds. Fifty-three head were sold at an average of $74 each. The top price of the sale was $174, J. L. Dickerson, Knoxville, Iowa, being the buyer. Below we give a complete list of animals sold:

1. J. L. Dickerson, Knoxville, Ia.	$174.00
2. J. L. Dickerson	140.00
3. C. C. Paul, Laurel, Iowa	73.00

Walker & Son's Poland China Sale.

On February 15th, at Fairbury, Neb., Thos. F. Walker & Son, Alexandria, Neb., held one of the most successful sales of Poland Chinas that has been held to date in the West. No really high prices were secured, in fact, a little more money was due these gentlemen on nearly everything in the sale. It is a fact that better sows may be had for the money in the sales made by these gentlemen than may be had elsewhere, with a very few exceptions. The herd boars were not on exhibition and the writer is of the opinion that these two good boars, Blue Valley, a son of Blue Valley Quality, and Blue Valley Orange by Big Orange, would have added much to the sale had they been on hand. They will certainly bear inspection and buyers at this sale are assured of buying choice stuff in the matings offered. The veteran breeder of big Polands, E. V. Waugh, Greeley Center, Neb., topped the sale on Lot 1 at $150. F. E. Jackson, Hurley, S. D., was a contending bidder on all of the better ones and landed the choice sow of the sale, Lot 6, at $90. The fifty head averaged $58.60, which is a very satisfactory average, everything considered. H. S. Duncan did the selling. The list of sales at $40 or over follows:

1. E. V. Waugh, Greeley Center, Neb.	$150.00
3. U. G. Higgins, Nelson, Neb.	57.50
4. Frank Roberts, Earlham, Ia.	140.00
6. F. E. Jackson, Hurley, S. D.	90.00

The Kuhl Poland Sale.

A good crowd remained over from the Lonergan sale February 13th and, with some new buyers, Herman Kuhl, Florence, Neb., was enabled to make a sale of forty-three Poland Chinas at an average of $53.90. The top was the well-known herd boar, Big Tom, and he was secured by Paul Waggoner at $147.50. The price of Big Tom was no measure of his value, but it was one of those occasions when breeders overlook the opportunity to buy a good boar when they have a chance to buy him right. Col. Hrave Duncan cried the sale. Below we list those selling for $40 and above:

1. Paul Waggoner, Pierce, Neb.	$ 72.50
2. Harry Dodds, Florence, Neb.	57.50
3. I. S. Johnson, Stanton, Neb.	52.50
4. Peter Kaer, Florence, Neb.	55.00
5. J. B. Strickett, Kennard, Neb.	75.00

Tillingharst's Poland China Dispersion.

The dispersal sale of Sam Tillinghast's herd of Poland Chinas at Peterson, Iowa, encountered the worst weather of the year. The day was bitterly cold and the tent warmed with considerable difficulty. The crowd, as would be naturally expected on such a day, was not at all large, and as a result the hogs that were deserving of great deal better prices failed to make the average they would undoubtedly have made on a good day. Mr. Tillinghast has always kept a good strain of this type of hog about him and his stock has been appreciated by all who bought of him and it is too bad that he could not have been accorded a better farewell on his retirement from the business. The list of principal sales follows:

1. J. M. Peery, Alvord, Iowa	$77.00
2. E. Gritters, Hull, Iowa	67.00
3. J. H. E. Wessels, Cromwell, Ia.	97.00
4. E. S. Barker, Doon, Iowa	70.00

SUMMARY.

38 head ——$1,801; aver——$47.39

FREE BOOK ON

ALFALFA

How you can grow it on your land
How to get "catch" first planting
How to select and prepare the soil
How to get more than average crops

These and hundreds of other questions that you want answered are clearly and distinctly covered in our new book just issued entitled "Alfalfa—Wonder Crop". This remarkable book contains a priceless fund of information about alfalfa growing, secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. In simple language, easy to understand, it tells just the things that you want to know before you start to raise this greatest of all $cash money$ crops. This book will convince you that you have some land on your farm where you can profitably grow alfalfa. This information was secured at a great cost of time, money and research. It tells how to grow alfalfa, how to get results from first planting, how to select the field and prepare the soil. It tells all about fertilization, plowing, liming, preparing the seed, when to plant and how to plant. Tells what to do during the growing period, how to get bigger than average crops, and how to cut and cure. The contents of this book are worth many dollars to the farmer interested in growing alfalfa. This book is ordinarily sold for 25 cents but we will gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

GALLOWAY BROS.-BOWMAN CO., BOX 104 P WATERLOO, IA.

MOTORS FOR SALE

A PROMINENT automobile manufacturing concern offers for sale, at a bargain, a few slightly used motors. These motors develop horsepower ranging from 34 to 50, and are all of the four cylinder type. They have been slightly used for testing purposes, but have since been overhauled and are at present in first-class running order. They are offered at very attractive figures and should give excellent satisfaction as a means for furnishing power for almost any purpose about the farm. If you are interested in obtaining an excellent power plant cheap for use about your place, we invite your correspondence. Address "R," care this paper.

One of the Large Wheat Fields in the Shallow Water District

Logan county, Colorado. This field yielded 46 bu. per acre. This is the finest farm land in the West and we are selling it at the very lowest prices. One crop pays for the land. Finest soil and water. Close to market. Agents wanted. Write for free circular. Address

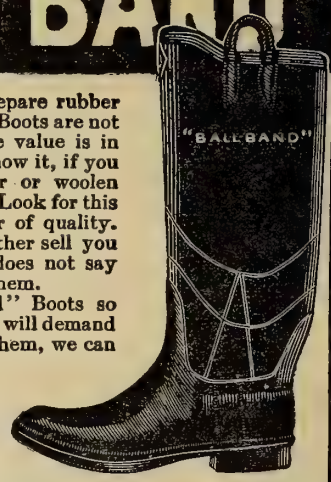
Platte River Valley Land Company

1119-29 City National Bank. OMAHA, NEBRASKA.

JUST as you fertilize your soil for better results, we sacrifice part of our profits to give you "Ball-Band" quality.

We believe in the idea of spending a little extra money to make a better article. In making rubber footwear for you we go about it that way. To give you a better fit we make "Ball-Band" Boots and Arctics over a natural last. We know that a farmer can't do his best work in boots that are not comfortable any more than a poorly shod horse can work right. So we take good care that "Ball-Band" Footwear will *fit*.

"BALL (Red) BAND" TRADE MARK



Also it must wear. The best way to prepare rubber is not the cheapest way and "Ball-Band" Boots are not the cheapest boots you can buy—but the value is in every pair. If you have worn them you know it, if you haven't, ask any man who wears rubber or woolen footwear bearing the Red Ball trade-mark. Look for this Red Ball. It's the sign of rubber footwear of quality.

Ask your dealer what boot he would rather sell you to give all-round satisfaction, and if he does not say "Ball-Band," it's because he doesn't sell them.

Our whole aim is to make "Ball-Band" Boots so good that the next time you want boots you will demand "Ball-Band." If your dealer doesn't sell them, we can tell you of a nearby dealer who does.

"The House that Pays Millions for Quality"

Rid Your Hogs of WORMS and You'll Have HEALTHY Hogs

E. Myers, President, E. Myers Lye Company

An enormous part of the swine plague known as "cholera" that sweeps over the country killing hogs and causing a loss of millions of dollars every year, is not **cholera** at all. It is stomach, intestinal or lung **worms.** The symptoms of hog worms are easy to detect. When you see a hog slinking around with his nose to the ground, hair sticking up, tail down, coughing, off his feed and losing flesh, don't jump to the conclusion that he's getting "cholera". He has **worms,** and if you don't act quickly your whole herd will have them, too. Feed all your hogs **twice daily** according to directions on every can on a ration mixed with

Merry War Powdered Lye

It destroys hog worms quicker than anything else in the world. And, even though there should be an epidemic of **real** hog cholera in your neighborhood, **your** hogs will be healthy and strong to resist it. MERRY WAR POWDERED LYE is the **proven preventive of hog cholera.**

The Folly of Vaccination

Vaccination may be all right for putting a hog's system in a condition to resist the cholera germ. But no amount of vaccination will cure a single hog of worms, nor will it make him well if he's sick. Vaccination will not keep him on his feed, make him fat, sleek, skin free from scurvy, and condition him so that he will be a prime hog at market time. **That's what** MERRY WAR POWDERED LYE does. Feed it to your hogs from weaning time on and you'll have healthy hogs. Cholera won't alarm you and your hogs will weigh in heavy.

Read This Convincing Evidence

C. F. NEWMAN, Lebo, Kan. "Have best results with my hogs and no sickness since I've used Merry War Powdered Lye while our neighbors have lost heavily."

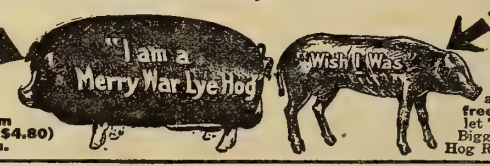
Refuse Substitutes

Don't experiment with ordinary, old-fashioned lye. **It might prove dangerous.** MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed hogs. Experience has **proved** its worth. **Insist** on getting it. **There are no substitutes.**

E. MYERS LYE COMPANY, Dept. 80 ST. LOUIS, MO.

10c A Can—120 Feeds

MERRY WAR POWDERED LYE is for sale at most grocers, druggists and feed dealers. It is convenient to buy in case lots, 4 doz. cans, $4.80. **Order direct from us in case lots (4 doz. cans $4.80) if dealers won't supply you.**



FREE If your dealers can't supply you write us stating their names. We will see that you are supplied and also send you, **free,** a valuable booklet "How To Get The Biggest Profits From Hog Raising."

MAKE THE HORSE GLAD AND EAGER FOR WORK

The way to do it is to clip him before you put him at the spring work. Take off his winter coat that holds the wet sweat and dirt. He'll get more good from his feed, look better, rest better and give you better service. The best and most generally used clipper is the

Stewart Ball Bearing Clipping Machine

It turns easy, clips fast and stays sharp. Gears are all file hard and cut from solid steel bar. They are enclosed, protected and run in oil; little friction, little wear. Has six feet of new style easy running flexible shaft and the celebrated Stewart single tension clipping head, highest grade. **Get one from your dealer** or send $2.00 and we will ship C. O. D. for balance. Money back if not satisfied.

PRICE $7.50

DEATH OF GEORGE ALLEN.

With sorrowing hearts we bring to our readers at this time the news of the death of Mr. George Allen, of Lexington, Neb. This means the removal of one of the pillars from the stockmen's ranks of the United States. For generations the Allen name has been intimately associated with improved live stock interests and for a period of forty years Mr. George Allen has been building for himself a name that will pass on to future generations as one to be revered. The record of his great achievements was started

GEORGE ALLEN.

by the success he attained as an importer and breeder of Shropshire sheep while located in Illinois. Thirty years ago he became interested in Short-horn cattle and his success in building up a herd of that noted breed has been equaled by few of his contemporaries and surpassed by none. In 1904 Mr. Allen moved from Atherton, Ill., to Lexington, Neb., where with the aid of his sons he has enlarged his breeding and farming operations until at the time of his death he owned and operated one of the largest and most successful Short-horn breeding establishments in the corn belt.

GRAVEL ROADS.

To the Editor of The Homestead:

It looks like the bulk of money is larger than the faculty for building. What we want are good roads not for coasting purposes, but for the good of the traveling public. We have had some experience in gravel roads and the best ones are made in this way. We located the center of a well-formed road bed, then four feet each way from center we open out a gravel bed eight feet wide and twelve or fifteen inches deep, depending on the kind of soil. The road bed is filled with coarse gravel mixed well with clay, or earth, and crude oil enough to make it a bed impervious to moisture. This bed is well packed for all heavy freight. The surface bed upon this should be of finer gravel about eight or ten inches deep and from the center each way should be from eight to ten feet making a top bed from sixteen to twenty feet wide with the edges well wrapped up with earth. Then the whole is rolled down to suit the form of a good road bed. The oil bed being underneath the seasons will evaporate the oil and harden the finer gravel sides of the road so as to make a fine driveway for coasting and light traffic.

Flint or limestone is the best. Money is being thrown away by the use of sandstone as a road bed because of the fact that when it is rolled down and crushed into form it is only a short time until the frost has it in such shape that it proves worthless. Never hammer or crush the sand rock. The better form can be made of sandstone by getting the rock in good building material form to be used only on soft, wet land, laying them in mechanically to make the eight-foot road bed and covering with the oil, clay and shell. Always put the oil bed underneath and in that way save all the fine particles to harden the road bed. D. R. Austin.

This Planter Never Misses A Hill—

BARE spots from missing hills cut the corn crop short. Good seed, rich soil and favorable weather *will not prevent this loss.* Don't be blinded to this fact—figure it out yourself. How much have the bare spots cost you, year after year? Eliminate this waste! *Make sure* that every square foot of your corn fields will be *working* for you this season.

Hayes Never-Fail Drop

The HAYES Drop *never fails.* Simple, durable and most efficient. Fewer parts, less breakages and delays. Has no clutch to miss and give trouble. *Never cracks or grinds the seed.* Will drop accurately any size or shape kernel. *No bare spots* in HAYES planted fields. No replanting necessary. Increased yields soon pay for it.

Four Wheels—Bigger Yields

Runners set back between the wheels, regulating depth of planting to the fraction of an inch. Plants every kernel *exactly the same depth.* Corn all comes up at the same time. *Earlier cultivation* and no missing hills from uneven planting.

HAYES Four-Wheels guarantee *surer germination and quicker growth.* Wheels pack the dirt around the corn to hold moisture and leave a *ridge of loose soil* on top. Ridge over the corn prevents washout in hilly fields and gives greater surface for sun's heat.

Covers where all ordinary open wheels fail—even in wet and sticky ground. Guaranteed not to clog. Short coupled, light draft and turns in shortest space.

160,000 Users Know

This planter is *guaranteed. It must* be all we claim and all you expect. Ask your neighbor or dealer or let us prove this planter prevents cornfield waste and increases corn yields. Don't make a mistake. Buy the planter that *guarantees* results.

Can be furnished with perfect working Fertilizer and Cow Pea Attachments; also Stub Runners or Discs if preferred.

PROFITABLE CORN CULTURE.

To the Editor of The Homestead:

In attempting to raise corn for profit it is well to look into at least a few fundamental facts concerning the crop. At fifty cents a bushel, the profit to be made raising corn sinks into insignificance. Take the average crop at twenty-six bushels to the acre and give the landlord his half the crop, as is the rule, in the crib. The tenant has thirteen bushels, or $6.50 worth of corn, per acre, for his summer's work.

If the tenant has forty acres, he has $260 worth of corn. At least $100 worth of corn will be required to keep his three horses twelve months. It is taken for granted that the tenant will find enough other employment to make a living throughout the year when not busily engaged attending to the crop.

By allowing the customary rate, the tenant would be out the following in raising the crop:

Seed corn per acre	$ .15
Two diskings per acre	1.00
Listing and planting	.75
Curling twice	1.00
Cultivating three times	1.80
Husking	.78
Total	$5.48

The tenant has $6.50 worth of corn. It cost him in labor, etc., $5.48, leaving him $1.02 clear profit, per acre, or $40.80 on the entire field, besides allowing him pay at the customary rates for all work done on the crop. Nothing is allowed for re-planting the crop as is often the case. Two or three plantings are necessary to secure a stand.

The living of the tenant and family, horses and tools, have not been counted, which of course, will serve to discourage still more if mentioned. Corn sometimes brings over fifty cents a bushel, but it is the exception rather than the rule.

By carefully figuring the costs, it is easily seen that no tenant can afford to raise corn on land that will produce less than forty bushels per acre. This will keep the tenant about even financially, and if he is careful and makes a profit feeding his crops to hogs, cattle, etc., he can gradually get ahead financially. But there is little land that will produce forty bushels to the acre, regularly. Then such land should not be planted to corn. Small grain and grasses should be put in the place of corn. This would cause a tremendous falling off of corn production with a large acreage of grasses and other crops. Cattle and sheep could be raised in large numbers, and the price of meet materially reduced. The country would be better off. Stock need less care on grass than the raising of a crop requires, and hence the meat could be sold for less money than is now required. At any rate, the farmer cannot afford to raise one-half of a crop of corn when the same effort will produce a large yield.

The corn yield can be largely increased by planting standard varieties of heavy yield corn. Poor varieties and poor soil go hand in hand and result in a poor man who uses them. After over a quarter of a century's experience raising corn, I will give you some of the prime essentials of successful corn growing.

The first consideration is the soil. This should be rich enough to produce a good crop under ordinary conditions. Spare no needed effort in preparing the seed bed. This should be thorough.

The second consideration is the seed used. It is not only desirable that the seed be tested, but a variety of pronounced yielding quality should be planted. Old worn-out seed should be discarded and a variety as nearly adapted to the peculiar requirements of the land as is possible to be obtained should be used.

The third consideration is the man and his equipment. He should have good judgment, be energetic and ready to do what is necessary whether the task be small or great.

Most farmers improperly prepare the ground. Plant too early. Use too much poor seed. Do not begin working corn soon enough after the corn is up. Do not work often enough and stop too soon. They plant corn that only three-fourths of which will grow, thus losing one-fourth the prospect of a crop on the start. The average farmer is not insistent enough. He should go at his work expecting to succeed and spurn failures. Do whatever is necessary to succeed. Success always costs highly.

Three corn plowings are better than two. Four better than three, and usually five are better than four. Many crops are raised with only two plowings when the third plowing would have increased the yield ten to fifteen bushels to the acre.

There are many ways of selecting seed. The best way perhaps is to go into the field before frost and gather three times as much as you expect to need of the best ears on the most satisfactory stalks. Place this where it will dry gradually before freezing. After being thoroughly dried freezing will not hurt it. If wet and frozen the germs of the kernels will be killed. Some time in March go over the seed corn again, carefully choosing the best for seed. Look well into the following details: The ear should be as nearly clindrical as possible and standard length, neither too long or too short, too thick or too thin. The rows should be straight, the circumference two-thirds the entire length. The color should be true to the variety. Yellow corn usually has red cobs. White corn white cobs. Any variety is usually a sign of impurity in the seed. The butt and top should be well filled out with uniformly shaped kernels. The kernels should be wedge shaped, wider at the crown than at the tips and one-half as thick and wide. The germ should be large and well developed. The kernels should be of uniform shape and size over the entire ear.
